

WHAT HAPPENS OFF THE BOARD IS JUST AS IMPORTANT AS WHAT HAPPENS ON THE BOARD.  
 TEAM, FAMILY, FRIENDS, COMMUNITY,  
 THE VIEWS, AND EVERYTHING IN BETWEEN!

THIS IS NITRO!

Dealer Manual | 2024-25

## Nitro Snowboards – a Family Journey

Time flies – and quite honestly, we had no idea where Nitro would be after more than 30 years when we started working on the first product line in 1989 and finally founded the brand in 1990. We were just stoked that snowboarding had already come this far at that point and we'd actually be running our own snowboard company.

Being able to dream up whatever board you wanted and seeing it come alive was the biggest thrill – and still is today. It may sound pathetic, but it still gets us stoked to see someone using one of our products and to realize this person has spent their hard-earned money on a piece of equipment we have designed and produced.

Being a privately owned company, everyone at Nitro can focus 100% on product we truly believe in. We are only responsible to our customers, team riders and our own instincts, not to some anonymous investors.

We take this responsibility quite seriously and will continue to do what we did with for more than 30 years: Put our dreams into reality and make sure that our customers feel the same joy and excitement riding as we had designing and testing. As a result, Nitro has an impressive track record of industry firsts, innovations and advancements in technology, performance and outright fun in snowboarding. And there's no reason to stop. Come join our family!

# THIS IS OUR NITRO DNA

## NO ONLINE SHOP - WE ARE A TRUE PARTNER NOT COMPETITOR

We don't sell direct to consumer to support the shops that allowed us to grow and who supported us over the past 34 years. Those Shops are community hubs and the base layer of snowboarding culture.

## GIVING BACK TO SNOWBOARDING

Every Dollar spent with Nitro will stay in snowboarding. We invest in employees, team riders, production & innovation, snowboard photo- and videographers, events, distributions, sales reps, shops, shop employees and local communities.

## INCLUSIVE - NOT EXCLUSIVE

We believe in inclusion and welcome everybody to snowboarding. Our goal is not to be the coolest brand, our goal is to welcome everybody to snowboarding and help them find their pleasure within our sport.

## RIDER OWNED AND OPERATED

We are not owned by any big corporation, so we can make decisions based on our own judgement and adjusted to the market. Being Rider owned gives us the freedom to focus on what's really important rather than what creates the biggest conversation rates. We don't need a fancy headquarter to impress anybody. Since the beginning in 1990, our company philosophy has been based on the principle that our employees can work from where they live. What's now considered hip has been our creed for decades.

## SUSTAINABILITY - NO BULLSHIT POLICY

We have a no bullshit policy. We take responsibility for the footprint our products and company leave to nature and do everything we can to reduce it. It's an ongoing process, we are learning new aspects along the way and we are transparent about our progress.

# ULTIMATE BOARD DIVERSITY

Diversity has been the design creed of the Nitro snowboard line since the beginning, and there is a long list of industry firsts in board shapes from the early '90s until today.

This variety is not driven by 'coming up with the 'next crazy new thing'', though: It pays respect to different riding styles, from weekend warrior to pro, from park to pow, from resort to the backcountry. It is fueled by the variety of people in our company, from technician to salesman, from team rider to the kids in our families. This allows us to come up with a great variety of boards that are - above all - functional and fun.

# NITRO BOARDS ARE 100% CO<sub>2</sub> REDUCED AND COMPENSATED

Together with ClimatePartner, we at Nitro can use specific and accurate tools and information to measure our carbon footprint in the life cycle from production to the end life of our snowboards.

Our partnership with ClimatePartner allows us to find more efficient ways to improve and reduce our carbon footprint in every step of our products' lifecycle. ClimatePartner also enables us to offset our snowboard's current carbon emissions footprint by investing in climate change offset projects and solutions - making Nitro snowboards 100% Carbon Neutral. Through the process, we have learned that the most significant cause of emissions of the Board during its Life-cycle is the materials used to build it. Therefore we are always searching for new ways to reduce, replace, and used better materials.

Reducing, rethinking, and investing in impactful offset projects for 100% of our snowboard's lifecycle carbon emissions is just the start.

We are excited for a better tomorrow, and with this, our journey to do better continues today.

# 10<sup>TH</sup>

ANNIVERSARY

**BRYAN FOX**

A NEW SUSTAINABLE APPROACH.

Once again, we set out to raise the bar of what is possible within snowboard construction, not only through creative shapes, functional flexes, and helpful sidecuts but through new sustainable and recycled materials that offer the same or better performance, durability, and product life as established materials. This season, the Quiver has become the forefront once again of what the landscapes of boards will look like in the future—over ten years ago, it was the Quiver Series functional shapes, then the focused designs for specific terrain, and now it is the sustainable processes and materials that make up these boards that will push the standards of snowboard building once again.

The Quiver series utilizes more post-industrial recycled materials, which are leftover factory materials that never have to be transported or reconstructed, ensuring an even more sustainable process for using recycled materials. The EcoSpeed Base material, EcoPoxy 33, and EcoGuard top sheets all contribute to the increase in the amount of natural and recycled materials that build up one of the best-performing Quiver Series to date. The most sustainable boards are the ones that last the longest, and that is our benchmark when replacing and implementing any new recycled or natural material. Mount up one of the most eco-friendly Quiver boards ever made and join us into the future - a future full of better choices on and off the mountain.

**GREEN SPEED NATURAL WAX**

All Nitro boards are factory-tuned with our 100% Green Speed Natural Wax, a fully biodegradable wax made of renewable resources.

**ECO POXY 33**

A new generation of epoxy resin that is an environmentally enhanced, clear, and waterproof epoxy system with over 33% of products molecular structure derived from plant and vegetable matter.

**ECO SPEED BASE**

Base material that utilizes post-industrial Ptex base materials at an 85% rate.

**ECO GUARD TOPSHEET**

Topsheet material that utilizes post-industrial recycled material at a 90% rate.

## DESCRIPTION

The Quiver Cannon is the most iconic swallowtail snowboard thanks to Bryan Fox, Marcus Kleveland, Markus Keller, and the rest of the Nitro Pro team ripping it worldwide in every type of terrain, from big open-face pow runs and halfpipe contests to charging slushy park laps. It is available in two sizes, the versatile 173cm and the big boy 203cm. Both sizes ride smaller than their registered length because their effective edge is reduced - providing easy control with speed, endless float, and the most fun on and off the marked trail.

## TECHNICAL SPECIFICATIONS

Sizes	Running Length	Nose / Tail width	Waist width	Sidecut	Set-back	Rider weight
173	1140	300 / 292	255	7.7 / 6.9	-25	70+
203	1420	310 / 302	255	9.7 / 8.9	-30	75+

## DESCRIPTION

If you are looking for a surfier feel on the mountain no matter the conditions, try the Quiver Slash offering a 3D Surf Tech shape with a convex nose and long transition into the front binding for the ultimate float and surfy feel. At the same time, the concave tail allows for quick, smooth edge-to-edge control and carve-ability on any of the marked trails. The concept of a 3D Slash is simple - It's crafted to help all-mountain riders have more fun and turn any condition into a pow day experience.

## DESCRIPTION

Start clearing space on your top shelf because the Banker will bring home some serious banked slalom hardware. The team favorite Quiver Banker's directional shape, sintered base, and responsive core will help you easily and confidently fly through banked turns in and out of the trees, making it the fastest board in the Quiver Series. There is a reason why Bryan Fox says this is his favorite ATV board in the Quiver Series.

## DESCRIPTION

The Quiver Pow evolution continues with a new shape theory inspired by our passion for snow-surfing - a flatter, wider, and larger nose radius that provides the ultimate float, glide, and stability by keeping you and the board on the surface of the powder. Turning on this Tapered Pintail shape through open pow fields has never felt better - the new Pow was designed for the experienced rider looking for a whole new level of float, glide, and railing in the pow!

## DESCRIPTION

The FinTwin is the perfect powder board for riders looking for a short slash-happy snowboard, making those precious pow days even better. The shape is inspired by early surf shape exploration in the 1940s, where utilizing a larger nose surface area and parallel-twin keels helps float and hold your edge through the surface instead of dragging to give you that quick edge-to-edge movement without sacrificing control and speed.

## TECHNICAL SPECIFICATIONS

# SPLITBOARDING

Splitboarding is something Nitro has been dedicated to for over 30 years - at first, out of necessity and personal passion to get to and ride the untouched powder we could see in the distance. We are proud to offer complete splitboard set-ups for every type of splitboarder or terrain, allowing our Nitro fans to purchase their complete splitboard set-up with the trusted Nitro Approval and Technology. We want to make the splitboard experience as effortless as possible, and that all starts with creating a versatile set-up offering. Split boarding has been in our blood ever since we introduced the first production splitboard over three decades ago, and we are proud to continue to help others get out and experience the joys of nature on a splitboard.

## DESCRIPTION

The Vertical Splitboard adheres to a construction philosophy of reduced materials for increased performance and speed at minimum weight for lightning-speed accents - while offering the floaty, responsive, and fun ride Nitro is known for. The board's narrow outline significantly improves tracking, traversing, and uphill speed under challenging conditions. Built for the riders looking to push the limits of what is possible on a splitboard while effortlessly getting more runs than everyone else.

## DESCRIPTION

Splitboarding for us is about the ride down as much as the walk up, and that is precisely what the Slash Split focuses on - it provides you with a surfy experience no matter what the conditions or terrain - featuring a Directional Tapered shape, 3D Surf Tech hull design, and Trüe Camber, making it the surfiest splitboard design and ride in the Nitro line-up. The concept is simple - designed to improve the flow and feel of the ride down while offering everything you need for the skin up.

## DESCRIPTION

The fan-favorite Squash Split offers more float and an elevated turning edge hold for the ride down—This is the expedition version of the popular swallowtail powder and groomer smasher snowboard - the Nitro Squash. It floats in the backcountry like a volume-shifted shortboard, skins up like a billy goat, turns like a dream, and is designed to rip pow and engineered to get you up with ease and speed. Splitboarding has never ridden better!

### DESCRIPTION

The true resort explorer, the Nitro Team Splitboard, is designed for riders looking for a versatile splitboard that they can use on and off the marked trails, in and out of bounds, without switching between a solid board and a split. One adventure board all season long. The concept is simple: a splitboard that rides like a regular snowboard so it can be enjoyed as your daily driver with the possibility to reach those distant peaks with speed and ease. The Team Split is built for the adventure boarders - with or without lifts!

# NITRO X KOHLA SKINS

Custom-fitted climbing skins from KOHLA will be available to all Nitro splitboards. All skins are marked for left and right and come in a lightweight packing sack made of recycled material

- made in Austria / produziert in Österreich
- trim to fit / zuschneidbar
- 100% waterproof / 100% wasserfest
- KOHLA Fiber Seal Technology
- solvent free / lösemittelfrei
- water resistant / wasserfest
- easy handling / leichte Handhabung
- easy release / leichtes Auseinanderziehen
- Smart Glue Adhesion

## VERTICAL SKINS

Vertical skins are tailored for high performance thru Kohla's new Fiber Seal and Smart Glue technologies. Fiber Seal Technology prevents the skin construction from absorbing water to maintain a lightweight skin and good grip and a low friction glide in changing conditions. Smart Glue is a solvent-free adhesive with better bonding in wet or cold conditions. Skins with Smart Glue are easier to release than traditional hot-melt skins. Metal Speedhooks on both ends match the mounting holes in the boards tip and tail to set them up perfectly aligned in just seconds. A mix of 65% Mohair and 35% synthetic Nylon fibers make these skins glide effortless while generating maximum grip when it gets to the top.

## UNIVERSAL SKINS

These PEAK skins can be cut to fit any splitboard up to 175cm length (skin size is 170cm x 13,5cm). An angled stainless steel bar at the front end and the proprietary butterfly multi-clip at the tail allow you to mount these skins onto almost any board shape. the set comes with a packing sack, cutting knife and DIY instructions.

## PEAK SKINS

The Peak skin is pre-cut to fit the specific model and size Nitro Splitboard. Kohla quality "made in Austria" and Hot-Melt technology ensures the highest performance. Metal speed hooks on both ends are matching the mounting holes in the board's tip and tail to set them up perfectly aligned in just seconds. A mix of 65% Mohair and 35% synthetic Nylon fibres make these skins glide effortless while generating maximum grip when it gets to the top.

## BINDING CRAMPONS

SPARK R&D Crampons are 4WD for your splitboard.. Constructed of lightweight aluminum for max strength and minimum weight. Installation and removal is effortless and can be done on the fly without unstrapping in just seconds.

Crampons are available in 3 sizes, NARROW for boards with a waist width up to 25cm, REGULAR for boards with a waist width of up to 26,6 cm, and LARGE for all boards wider than 26,6 cm

## DESCRIPTION

The carefully engineered Highlander offers a pro-caliber directional shape geared for record speeds and precision, while our exclusive KOROYD® Powercore keeps the weight at a record minimum. In addition, the Antiphase Technology reduces unwanted board vibration. It provides the smoothest ride in the line-up, even when hitting record-breaking speeds off the marked trail, this all-mountain masterpiece is for the experienced rider looking for an ultra lightweight all-mountain ride engineered for speed and precision all over the mountain.

## DESCRIPTION

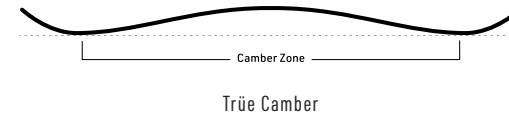

This board has become a Volcom and Nitro team favorite for a good reason: it is the most capable backcountry freestyle snowboard the mountain has ever seen. The Alternator x Volcom is for those looking for a progressive width directional shape and team-tested flex to step up their game from the marked trails to the backcountry. This board is purposefully designed and equipped to let your mind run wild, regardless of terrain or conditions.

"The Alternator x Volcom board - is simple. The board is absolutely insane, no words can describe the feeling of this monster."

- Seth Hout

## DESCRIPTION

The Alternator has instantly become a team favorite because of its capable backcountry freestyle snowboard attributes - Designed for those looking to step up their game from the marked trails to the backcountry with a classic directional silhouette shape with an oversized width and loads of power under the hood - the brainchild of all-mountain maniacs Jared Elston, Griffin Siebert, and Tommy Delago.

## TECHNICAL SPECIFICATIONS

Sizes	Running Length	Nose / Tail width	Waist width	Sidecut	Set-back	Rider weight

(cm)	(mm)	(mm)	(mm)	(m)	(mm)	(Kg)

"When designing the shape for the Alternator, Griff and I wanted to make the most capable backcountry freestyle board we could. Essentially, we wanted to make a little wider Team Pro for better performance on deep days. The early rise on the nose floats effortlessly, while the high kick in the tail allows for a less strenuous switch powder ride. I recommend this board to anyone looking for a playful board that wants to boost side hits, rail turns, or blast into a soft landing."

- Jared Elston

## DESCRIPTION

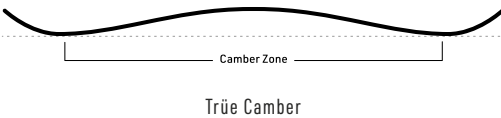

The Santoku is a playful, flexing experimental ATV (All-Terrain Vehicle) snowboard and the brainchild of world-class backcountry snowboarder and big-picture advocate Elias Elhardt. Designed to be the most fun and comfortable snowboard you can have under your feet, no matter where you find yourself on the mountain, give the extra float provided by the exaggerated nose and tail lengths. The Santoku's flex and twin shape are so diverse even park-style masters have made it their go-to shred stick. It's hard to give this board a category because it would thrive on any mountain in the galaxy.

„I love this board and ride it all season in every terrain. Especially as a backcountry & freestyle board, we kept refining the stiffness of the board, offering more support now, without losing it's playful identity, which of course is the heart and sole of this board.“

- Elias Elhardt

## DESCRIPTION

The Nitro Squash's iconic swallowtail shape generates more float on those precious pow days without any drag. At the same time, the legendary progressive sidecut makes carving like a pro the new norm while navigating the entire trail map. This award-winning board model is for any snowboarder looking to have more fun on a shaped board without sacrificing the fundamentals needed to be your daily driver.

### DESCRIPTION

The Team Pro Marcus Kleveland is a board built to do it all at a level above the rest, and it has proven to do so by becoming the most decorated board since its inception. But just like Marcus Kleveland's riding style, it's not about the medals or awards; it's about having as much fun as possible while pushing your limits. This board offers more pop, control, and speed, allowing Marcus to take his creative riding from the knuckles at his home mountain to the slopestyle finals at the X-Games. For the riders looking to progress and learn, you have never imagined you would be trying.

### TECHNICAL SPECIFICATIONS

Sizes	Running Length	Nose / Tail width	Waist width	Sidecut	Set-back	Rider weight
159	1180	297 / 297	254	11.7/7.3/11.7	-15	65-85

(cm)	(mm)	(mm)	(mm)	(m)	(mm)	(Kg)

"I got the opportunity to design a pro model board, which I am excited about. The Team Pro x MK board offers the perfect flex, speed, and, most importantly, durability I need in and out of the contests - which, given last season's results, the board has been very helpful, and I only used one board all season long. The picture of the trail map on the topsheet represents my hometown - Dombås; it all started here. I wanted a design that looked like a kid's daydreaming drawing, and I'm hyped about how it turned out. I love how the colors on the base fade into each other, representing the Dombås winter skies."

- Marcus Kleveland

## DESCRIPTION

Engineered with a hyper focus to allow riders with larger boot sizes to have a smooth ride. A large boot size should not limit progression or deep carves; the Magnum ensures this by offering a perfect blend of a wide waist width, Power Pods, strength, response, and flex to allow fun progression all over the mountain. Snowboarding's original wide board designed to ride like a responsive directional weapon!

„As a team photographer for Nitro you need a board which performs everywhere on the mountain like the Magnum. That's why I was even more happy that Nitro gave me the chance to design this board with Paul Brown and some of my most favorite Landscape pictures made it onto this board.“

- Markus Rohrbacher

## DESCRIPTION

Eero Ettala, Torgier Bergrem, and Ludvig Billtoft took matters into their own hands and created a new Beast shape this season that will provide more control and power - The updated Nitro Beast is no joke; it unleashes the durability, pop, speed, and flex you demand to be at the forefront of snowboarding's progression in and out of the park! Nitro's most responsive freestyle snowboard for a reason.

„It feels really special to be a part of including my own imprint on a board. Doing this together with people that inspires me makes it even more unique. We got to have our own spirit animals that represented us with a humorous twist.“

- Ludvig Billtoft

„One of the best all around boards. Feels solid, familiar and reliable.“

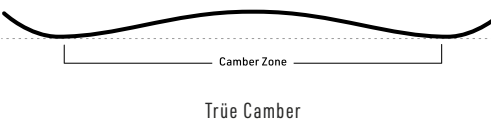

- Torgier Bergrem

„This time we are going into a bit more playful look and feel on the graphic. Ludda, Torgeir & myself found our spiritual animals and decided share the ride to the mountains.“

- Eero Ettala

"The T1 is a classic which has been part of Nitro's freestyle history and it is so cool to continue this energy. It always works and you can fully trust it in any type of freestyle terrain. Also the graphics have been some of the sickest nitro graphics ever which always made me want to ride them!"

- Benny Urban

„Big Skys, wide open terrain, and horses represent the freedom of what, where, and the tricks you can do while snowboarding - With the T1 under your feet; the world is yours.“

- Sam Taxwood

## DESCRIPTION

The Optisym is for all those snowboarders who enjoy fun, low-impact, buttery, friendly freestyle snowboarding, which means turning everything into a feature, even a groomed run or the knuckles of park landings, capable of switching from airtime tricks to flat ground tricks within seconds. This snowboarding style is probably the most relatable and achievable, so we decided to make a board specifically for this type of riding - for the dreamers - the friendly freestyle shredders!

### DESCRIPTION

Developed with our top female pros to make a playful flexing freestyle snowboard that offers the confidence and support needed to allow for comfortable progression in the air, on the rails, or in any park worldwide - with a touch of fun performance, backed by durable technologies like Railkiller edges and Ureshred Sidewalls to handle your progression. Making park days better, one lap at a time!

„This is my first collaboration with a global brand. I'm very grateful for this opportunity, and I look forward to seeing how this collaboration takes form. It's going to be incredible to learn to snowboard on a board I've taken part in creating. Thank you Nitro for allowing me to be part of such a prominent snowboarding community here in Salt Lake City.“

### DESCRIPTION

The Optisym is for all those snowboarders who enjoy fun, low-impact, buttery, friendly freestyle snowboarding, which means turning everything into a feature, even a groomed run or the knuckles of park landings, capable of switching from airtime tricks to flat ground tricks within seconds. This snowboarding style is probably the most relatable and achievable, so we decided to make a board specifically for this type of riding - for the dreamers - the friendly freestyle shredders!

### TECHNICAL SPECIFICATIONS

Sizes	Running Length	Nose / Tail width	Waist width	Sidecut	Set-back	Rider weight
<b>146</b>	990	280	238	9.0 / 5.6 / 9.0	0	45-65
<b>142</b>	960	276	234	9.0 / 5.6 / 9.0	0	-65
<b>138</b>	940	272	230	9.0 / 5,3 / 9,0	0	-45
(cm)	(mm)	(mm)	(mm)	(m)	(mm)	(Kg)

"If I had to pick only one board to ride for the rest of my days it would be the Optisym. Feels so good in the park but it's also super fun to turn and rip around the mountain on too. I love it!"

- Christy Prior

„When the looks don't lie - the Optisym feels exactly how it looks, simple and powerful, yet very playful and responsive, and it's one of my favorite boards to ride rails, jumps, and even the pipe with its great edge control.“

- Celia Petrig

## DESCRIPTION

The new Future Team Pro MK twintip board is explicitly designed to offer pro-caliber speed, pop, durability, and technologies - allowing younger skilled riders to progress faster. As a board capable of handling exponential progression and bigger terrain, it has the same design as the bigger Team Pro MK, offering a custom-like flex, support, and ride to allow younger riders the chance to ride just like Marcus Kleveland.

# THE ULTIMATE INTERFACE

## CONTROL / COMFORT / DAMPENING / DURABILITY

With 34 years of experience designing snowboards, boots, and bindings under one roof, we have engineered an interface to seamlessly transfer a rider's input to the board's edge. The shape of our highbacks is designed to match the contour of our boots perfectly, while the ankle straps and toe straps provide support and outline the boot's flex. A bindings task is delivering maximum control and instant response, absorbing impacts, and eliminating vibrations, such as heel chatter, for a smooth and comfortable ride.

Every model in our line is built around a rider and with a riding style in mind, leading to different shapes and flex patterns of highbacks, baseplates or straps, while all our products share the same imperative for high quality and ultimate durability.

## AIR PLUS DAMPENING

Introducing Nitro's new groundbreaking footbed construction, featured on the new Phantom Plus and Phantom bindings, built to provide next-level dampening and support for all-day riding. The new AIR Plus footbed is engineered with high-impact absorption, lightweight, durable, expanded polyurethane combined with Nitro's well-known air-dampening technology.

### DUAL AIR DAMPENING

If you are looking for a way to prevent hard landings and chatter from affecting your riding experience, DUAL AIR dampening is a great option to consider. It is lightweight and strategically placed where you need it the most to enhance your overall performance.

### AIR DAMPENING

The lightest shock-absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not sacrifice any response and control.

### EVA DAMPENING

When it comes to EVA (foam) dampening, it's safe to say that it's the most widely used technique in the world. You can see it on sneakers, beds, or even yoga mats, and always means comfort to the user. It provides lightweight and cushioning without compromising control.

## CABLE REINFORCED CONNECTORS AND RATCHETS

Over-molded stainless-steel cables inside the ratchet- and connector straps - no more stretch, no more breaks.

### NITRO BINDING SUSTAINABILITY

- We use 20% recycled material in our plastic parts
- All plastic parts are injection molded, a nearly zero-waste process
- We banned any plastic packaging and use only recycled cardboard to protect our bindings

More Binding Tech here

# NITRO BINDINGS ARE 100% CO<sup>2</sup> REDUCED AND COMPENSATED

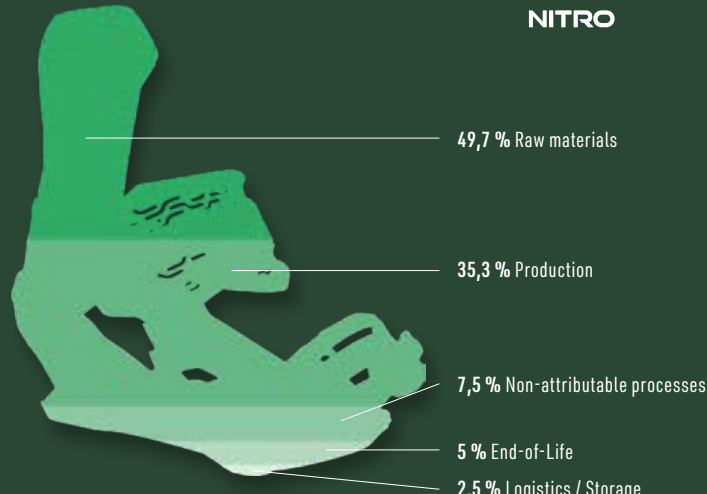

We at Nitro strongly believe that implementing small initiatives, such as eliminating plastic in our packaging, material choices, built-to-last designs, and now offsetting our climate emissions, can significantly improve our product's overall quality and longevity while being kinder to Mother Earth. Our partnership with Climate Partner enables us to assess our carbon footprint, identify areas for improvement and localize our improvement efforts while being able to act instantly by offsetting 100% of the climate emissions created through our bindings life cycle.

The Future of Precision Boarding Is Here!

## SPECIAL FEATURES

- **AIR PLUS Dampening**  
Supreme comfort and minimizes the effects of hard impacts and vibrations.
- **4mm HEEL RISE**  
Improved heel edge response and control through leverage
- **3° CANTED Footbed**  
Allows a natural body positioning for the ankles, knees, and hips
- **Premium Locked Down Ankle Strap**  
Perfect fit combined with firm cushioning for progressive riding without sacrificing comfort for control.
- **ÜBERGRIP Toe Strap with Vibram® EcoStep™**  
The best fit and grip with any boot shape
- **CABLE REINFORCED Connectors and Ratchets**  
Steel cables molded in the ladders for No stretch, no breaks, no worries!

## DESCRIPTION

The Phantom Plus binding provides a unique riding experience with exceptional turning and carving control, thanks to the 4mm heel rise. It maintains its classic all-mountain performance while prioritizing dampening and customizable response for better comfort and fit when navigating through choppy terrain towards the end of the day. The focus is on enhancing the precision of the entire snowboard interface, including boots, bindings, and board, to help intermediate to pro riders improve their turning power and control. The new Phantom Plus is perfect for those passionate about connecting perfect turns in style all over the mountain.

## DESCRIPTION

The Nitro R&D team has revolutionized the riding experience by introducing AIR Plus technology on the new favorite Phantom binding. The main goal is to improve the precision of the entire snowboard interface, including boots, bindings, and the board, by offering full adjustability with groundbreaking dampening technologies for the ultimate all-mountain ride. These enhancements help intermediate to advanced riders improve their riding skills. The Phantom binding is for riders who prefer a minimalistic and lightweight approach focusing on dampening comfort while maintaining excellent foothold, fit, and precision.

## DESCRIPTION

Are you looking for a freestyle binding with pro-caliber performance built stronger and more precise to support today's progression? Then this is the binding for you because of its ability to provide a precision fit, support on deep landings and high speeds, durability, and ability to withstand massive impacts, allowing riders like Marcus Kleveland, Torgier Bergrem, Sam Taxwood, and Yuto Yamada to push snowboarding limits every day from X-Games runs, video part worthy tricks, Utah backcountry jumps, to spring park laps at home. This binding is designed to withstand the wear and tear of professional snowboarding while providing a comfortable fit for day-after-day shredding!

## THE RAVENS

"This graphic was Inspired by the massive Ravens that fly around Mt.Seymour. I wanted to create a clean binding with a simple and iconic image on the High back that makes me think of hiking through the backcountry after a fresh snowfall. If you ever get lost, remember to follow the Raven."

- Jesse Robinson Williams

# THE ULTIMATE FIT

## BUILT FROM THE INSIDE OUT - FOR THE ULTIMATE FIT

The 31st Nitro snowboard boot collection focuses on making boots that are built to last, equipped with ground-breaking innovations, sure foothold, total comfort, and adjustable support. We offer a wide variety of boot models that provide user-friendly solutions allowing snowboarders of all skill levels and foot shapes to enjoy full days on the mountain. Over the last three decades of making snowboarding products, we have brought many of today's industry standards to market. We are proud to say we have created another boot line that will elevate the experience of every snowboarder's foot out there. The collection offers multiple new boot models, a new speed lacing system, upgrades on almost every model, upgraded technologies, and improved Step On® boots for men and women. This snowboard boot collection represents the consistency of Nitro's well-known quality, fit, durability, and comfortable performance to allow snowboarders of all ages and sizes to go out and enjoy the mountains in comfort, confidence, and style from the first chair to the last call. We believe that a good day on the mountain starts from the feet up, whether it's your first day or you are about to drop into the X-Games.

LACING TECH FOCUS

# NEW TLS POWERCORD

Latest Twin Lacing System Generation

The evolution of the TLS system, with improved locking power and durability: Introducing the TLS PowerCord, Nitro's latest speed lacing technology. No moving parts make the system failproof and even easier to operate and provide a precise lock and fit with no lace set. New and specifically developed, coated Dyneema laces offer highly improved laceability, reduced system friction, and boot closure.

**TLS**  
POWERCORD

More Boot Tech here

# TLS

## TLS - TWIN LACING SYSTEM

Nitro is leading the pack with the TLS lacing system: Easy lace engagement and release, combined with the low abrasion of our Dyneema® laces are the key factors of this highly reliable zonal lacing system. At the same time, the TLS features compact size and low weight while maintaining the reliability proven by tens of thousands of days on the mountain. Even though rarely needed, servicing and replacement of all parts including the lace are easier than with any other system on the market. Even using a standard lace if you're in a pinch is an option only available on Nitro's TLS boots. Easy-entry handle storage pockets as well as our Bail Out system for easier entry and exit round off the most developed dual lacing system on the market.

# RE/ LACE

LINER LOCKER

## RE/LACE LINER LOCKER (Patented)

The Re/Lace Liner Locker provides a secure and true liner lace lock every time, while additionally allowing for easy adjustability of your inner boot lacing when your boot shell is already tied, by simply pulling up on the lace handle. This allows you to (re)tighten your liner and foothold throughout the day (wherever you may find yourself on the mountain) without having to untie your boots shell lacing system.

# Ortholite® O-Therm™

## ORTHOLITE® O-THERM™

The World's First and only Aerogel-infused Open-cell PU Foam, the Ultimate Cold and Hot Weather Footwear Solution. OrthoLite® O-Therm™ insole technology creates a thermal barrier that elevates and reduces footwear temperature regulation to an unprecedented level, infusing open-cell PU foam with a proprietary aerogel creating the lightest, most advanced version of the world's most insulative material delivering unmatched thermal insulation and all-day comfort in cold and hot weather conditions underfoot.

## DUAL ZONE BOA® FIT SYSTEM

The upper and lower zonal adjustability is ensured by the BOA® Fit System. Two separate dials and lace paths work with the boot's cuff to isolate fit into two distinct zones. The upper zone dials in flex and stability, and the lower zone locks in the forefoot for greater response and control. This zonal adjustment solution allows for a precise fit ensuring a tailored foothold. The system can be loosened or tightened fast and effortlessly with the turn of the BOA® dials.

## VIBRAM® ICETREK

Developed to provide the improved grip on very cold, icy, or snowy surfaces. Vibram ICETREK allows you to move more freely in cold areas. The softness allows the compound to adhere to smooth surfaces and to support aggressive drags in order to improve traction.

## VIBRAM® ECOSTEP

Vibram has always researched new solutions that respect the environment, therefore has developed eco-compound, Ecostep Recycle, generated by the production process, made with a minimum of 30% recycled Vibram rubber. An innovative combination of sustainability and performance, which provides added durability and improved grip on wet and dry surfaces.

## D30® TECHNOLOGY

D30® is a smart material that moves slowly and increases comfort when in a normal state, but when shock or impact is increased the materials lock together to absorb and disperse energy created upon impact, before instantly returning to its flexible state. What this means is that the material increases the overall comfort by absorbing impact from deep landings or choppy snow conditions - allowing you to go faster and deeper all day!

Endure®

## ENDURE® GRAVITY FOAM TOE PROTECTION

This product is made with Endure®, a material developed and distributed by Gravity Group Srl. Endure® can withstand the most challenging and demanding outdoor conditions. It is long-lasting, even in wet and cold environments preserving its flexible behavior at very low temperatures without cracks. In addition, endure® has a high-tech closed-cell microstructure that allows achieving the highest toughness while keeping the lowest weight. At equal thickness, it is up to 50% lighter than rubber. Conceived as a higher-end replacement for rubber, Endure® prevents all the drawbacks in the use of rubber related to environmental impact. It is entirely made in TPU, which makes it 100% recyclable.

## NITRO BOOT SUSTAINABILITY

Minor Phthalate

All PVC reinforcements in our boots are 6P free and meet international norms.

Recycled Rubber

We are using recycled rubber for our outsoles wherever technically possible.

- **New Ortholite® High Cup Triple Density Footbed with O-Therm™** - More Support and Cushioning

## DESCRIPTION

We have upgraded our top shelf boot to be even more responsive and precise with our new TLS PowerCord and Cloud 10 Liner specifically for the riders looking for maximum response and support without sacrificing the needed comfort for riding from first to last chair. Backed by our pro team in the Olympics to X-Games events, dropping into „no fall zones“ in AK to exploring beyond the furthest splitboard track, the Nitro Capital snowboard boot will provide the fit, response, and support needed to conquer your greatest fears and wildest dreams.

# THE DAILY

A Pow Surf Boot For Daily Fun!

## SPECIAL FEATURES

- **Surf Rubber Outsole** - Designed for Flex and Roll
- **Patented Re/Lace Locker** - Quick and Easy Adjustment
- **Power Strap** - More Response
- **Zippered Gusset** - Keeping out the Elements
- **New Cloud Surf Liner** - For perfect board feel
- **EVA Footbed** - Cushioning and thermal insulation

## DESCRIPTION

As different as powsurfing is from snowboarding, it also requires a very specific boot. Much softer flexing than a regular snowboard boot and with a soft, rolling sole, it allows for the natural board feel so critical for riding without bindings. Lacing is quick and easy with our patented ReLace system, and a zippered gusset, closed off by a power strap, keeps out the elements. The grippy tread pattern provides traction on the hike up, while the entire boot is comfy enough to keep in on - all day long!

# CYPRESS

The Comfiest All-Mountain Dialed Fit

## SPECIAL FEATURES

- **Dual Zone BOA® Fit System** - Precise Zonal Adjustment
- **EVA Outsole with Rubber Impact Panels** - Using up to 30% recycled rubber
- **ILS Liner Lacing** - Eliminating heel slip and keeping your liner secured in the shell
- **Patented Re/Lace Liner Locker** - Easy and precise Liner lacing - all day long
- **Women's Cloud 5 Liner** - Proven Classic Nitro Fit and Comfort
- **Solo Ortholite® Women's Footbed** - Support and Cushioning

## DESCRIPTION

Nitro's Cypress BOA® boot is for the riders looking for a medium-flexing boot that provides an effortless and precision fit that can be dialed in with the Dual BOA® Fit System, engineered to offer a smooth medium all-mountain flex that can be customized through a single pull of Nitro's patented liner Re/Lace system. A true ATV boot for those looking to progress that will last season after season at an affordable price.

- **Patented Re/Lace Liner Locker** - Easy and precise Liner lacing - all day long
- **Women's Cloud 6 Liner** - Proven Classic Nitro Fit and Comfort
- **Solo Ortholite® Women's Footbed** - Support and Cushioning

**DESCRIPTION**

The Crown is known as one of the most comfortable and best-fitting boots and has now been upgraded to be even more durable; the women's Crown snowboard boot helps riders push their limits in any terrain while keeping their feet warm and comfortable. Comfort is crucial, and the Women's Cloud 6 Liner and Women's Solo Ortholite® Footbed provide the pro-level fit and response you demand with the comfort you dream about. Nitro's patented Re/Lace Liner Locker feature allows for effortless customization on the slope at any time. At the same time, the Crown comes in your favorite speed lacing option, which provides you with your preferred smooth and quick lace-up solution. This year the Black and Lilac colorways use recycled rubber to help reduce waste and continue our journey of offering more eco-friendly materials. So do yourself a favor and upgrade your comfort this season with the women's Nitro Crown snowboard boot.

## DESCRIPTION

The women's Monarch TLS is a true example of functional fashion with a hyper-focus on performance fit. Inspired by team riders like Christy Prior, who has a signature colorway this season fully inspired by her minimalistic, recycle, and functional design outlook, built for ripping all day in supportive comfort when tweaking and euro carving with confidence and style all over the trail map. It will take less than 60 seconds to put them on and off! Fully loaded with the perfect mix of time-proven technology, providing the foothold, comfort, and warmth needed for long days on the mountain, and developed and tested to keep your feet warm and dry in the most challenging conditions.
