Stronger.

20 YEARS OF COMMITMENT

Celebrating
20 years
of business,
friendships,
snowboarding
and product
progression.

UR.20

Our Mission

Dedicated to manufacturing the best snowboard bindings on the planet.

Union (Noun)

1. An association for a common object.
2. An organization of persons sharing a common interest.
3. A place where two or more things are united.
4. A bringing together into an integrated whole.

stronger.

Designed, tested and engineered in the Italian Alps

THE BOX: Colico, Italy

Union's global headquarters is located a quick 45 minute drive from the closest gondola. Living and working in the heart of the Italian Alps gives us the opportunity to test in the morning, be back in the office by lunch, adjust / modify designs by the end of the day.

Trusted by Professionals

TEAM

From the streets,
to the Olympics,
to the top of Alaska's
biggest spines.

Union's global team of over 100 professional athletes is a testament to the quality and performance of our product. There's a reason why more professional snowboarders trust Union Binding Company than any other brand on the market today.

Sustainable Materials

Introducing: Duraflex Blue

Union Binding Company is proud to partner with Envalior to introduce our most eco-conscious nylon to date. This new material is a member of the Envalior sustainable product family, attributed with a remarkable 90% of sustainable raw materials, based on a mass balance approach. In addition to being more sustainable than traditional plastics, this material has passed all of Union's in-house quality control tests for strength, durability in cold temperatures and product lifecycle.

Envalior is on a mission to lead the plastics industry towards a sustainable future, offering sustainable circular and bio-based material solutions.

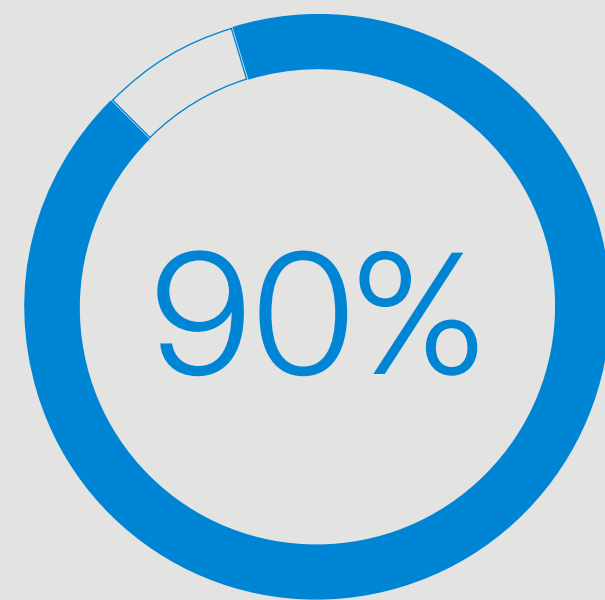

*Envalior is certified by TÜV Nord, a trusted independent third-party certifier, according to the International Sustainability & Carbon Certification Standard (ISCC PLUS).

Duraflex Blue

- Attributed with 90% sustainable raw material.
- More than -60% CO2 emission reduction in comparison to traditional, fossil based material.
- Certified by Union's in-house quality control team.
- Used on the all-new Falcor.

RAW MATERIALS:

BIO-BASED

Derived from renewable crops, such as canola (rapeseed oil).

BIO-CIRCULAR

Made from bio waste like used cooking oil (UCO).

RECYCLED

Created from discarded materials, like post-industrial glass waste or post-consumer plastic waste.

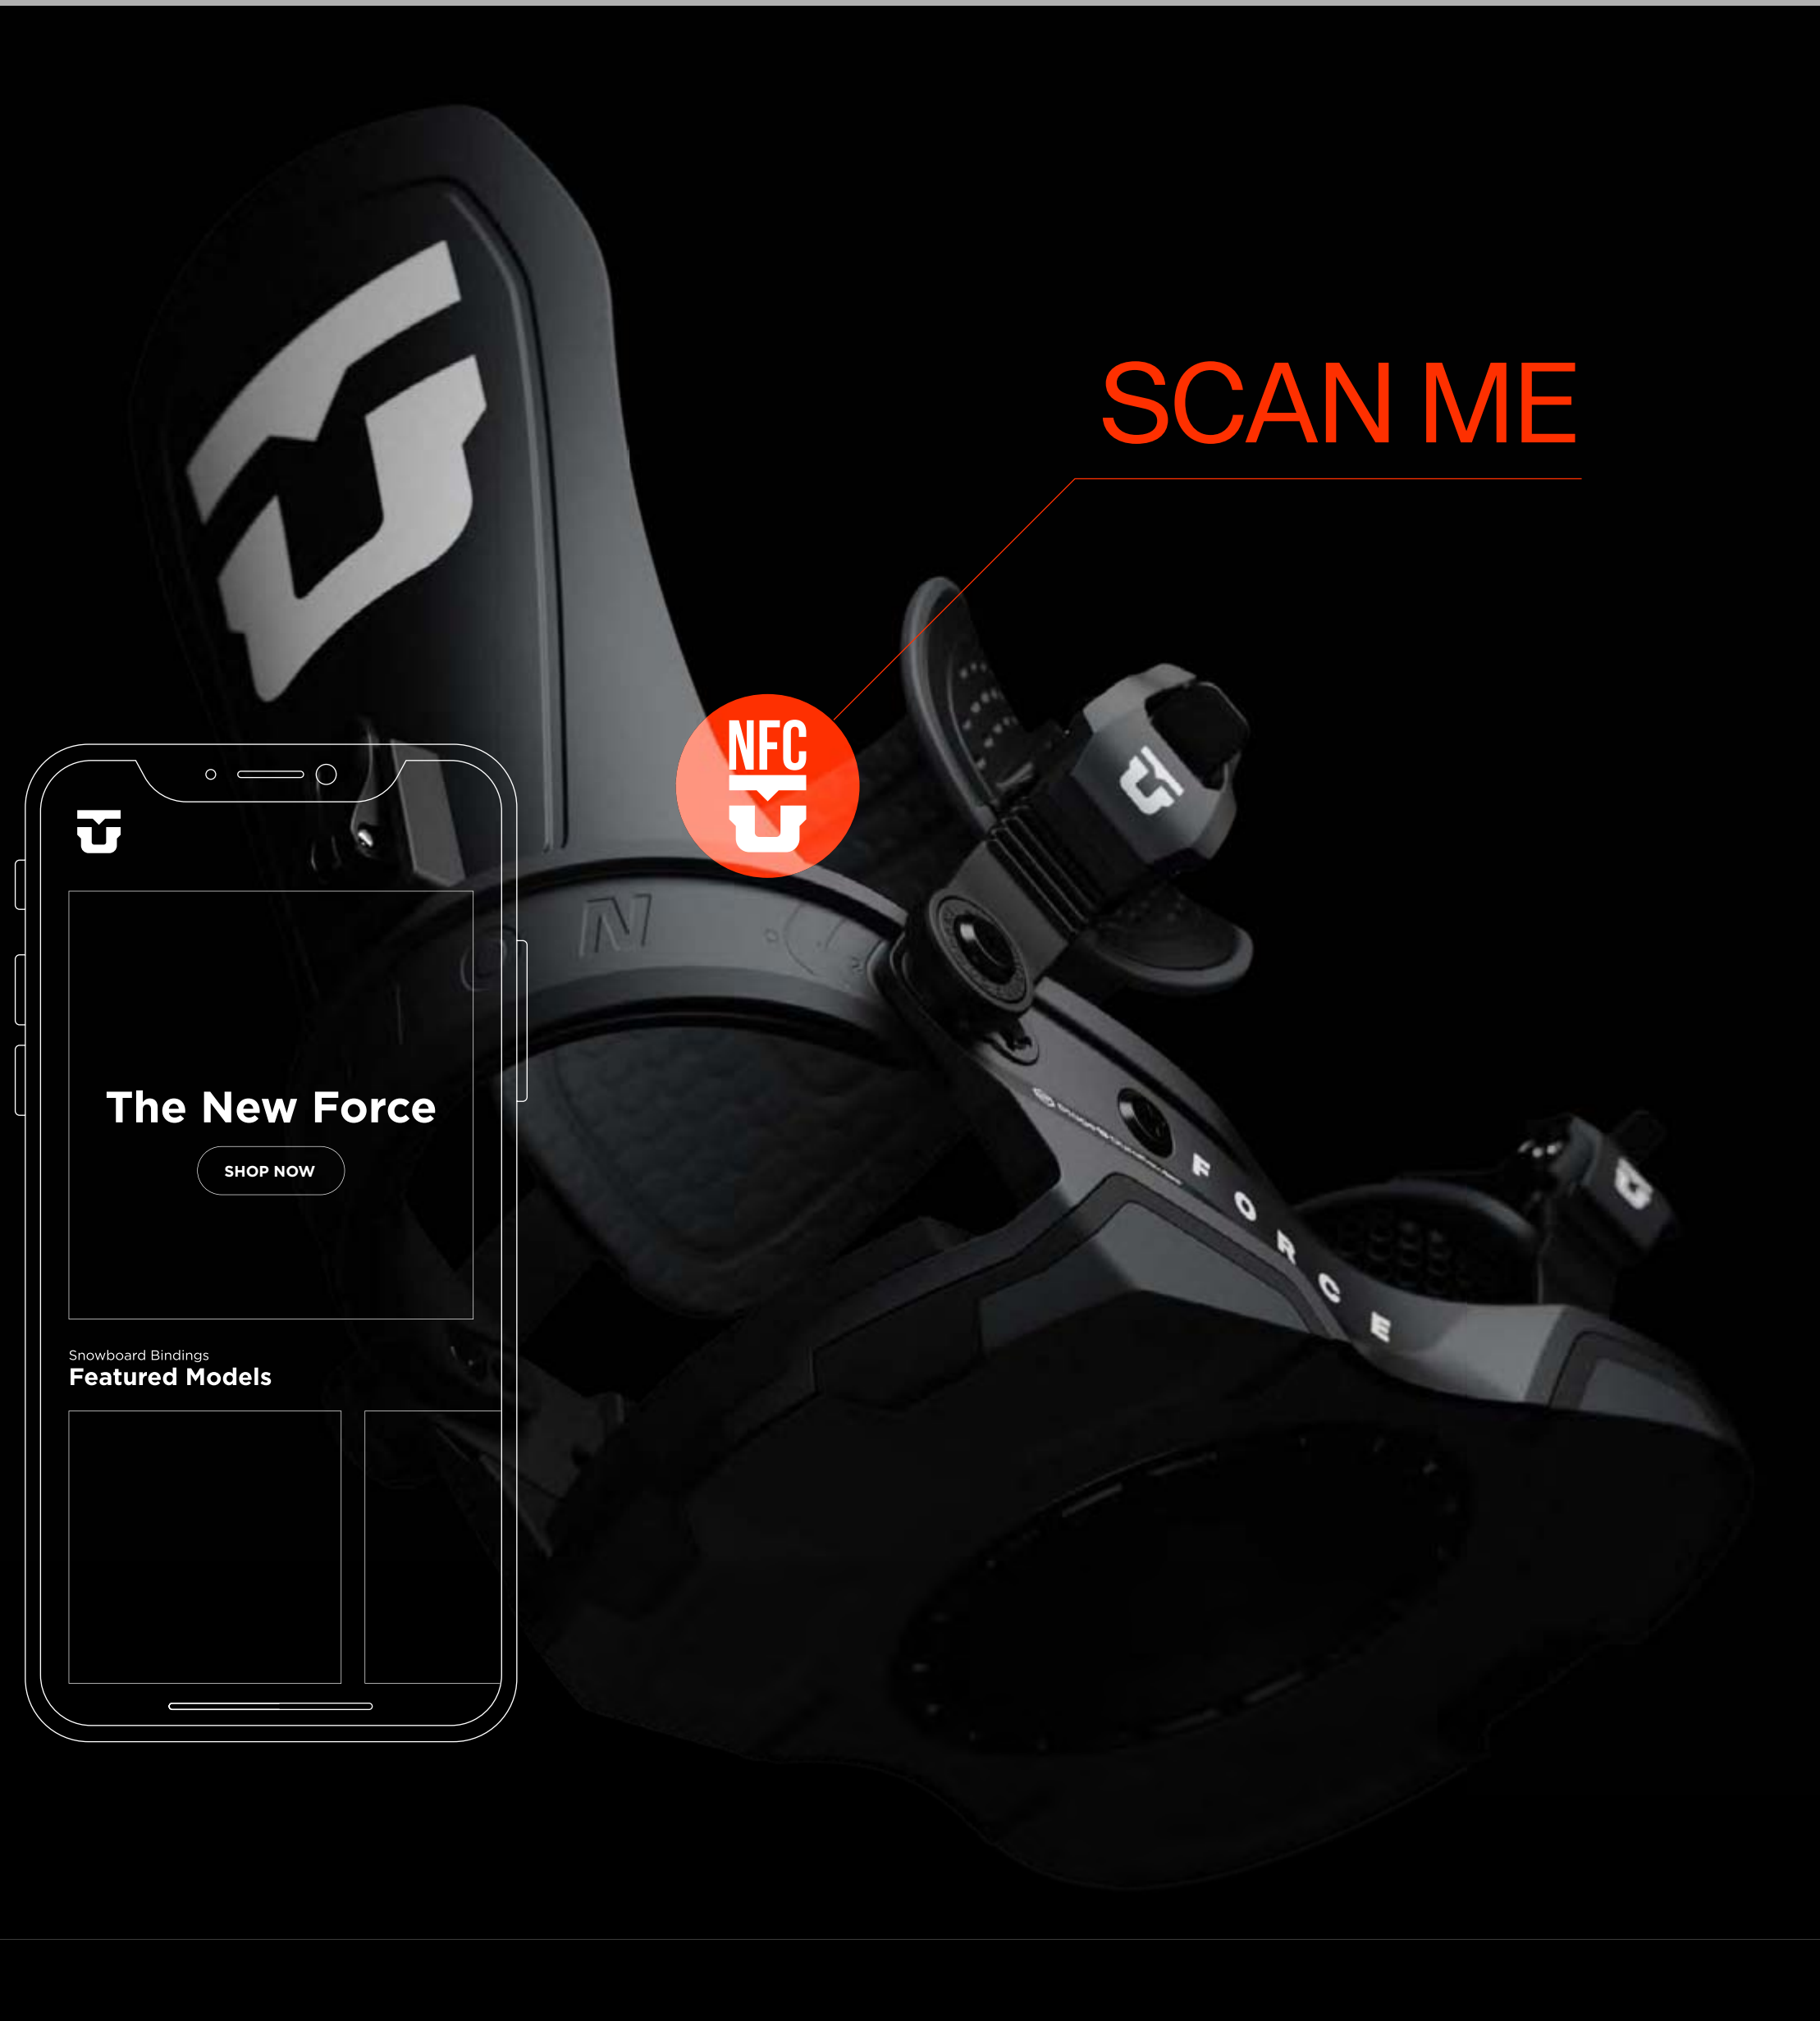

NFC

Starting in 2024 all Union Bindings will come equipped with **NFC wireless technology**. NFC is a set of short-range wireless technology, typically requiring a distance of 4cm or less to initiate a connection. Scanning the NFC chip in the binding will allow users to access product and brand information, register a product, start a warranty, and more.

Internally NFC technology will allow Union to better track manufacturing and warranty data, allowing us to build even better products in the future.

Performance Collection

Defined By:

Technical

Responsive

Hard Charging

Category Overview:

Designed specifically for our pro team and snowboarders who want to push the limits of their riding. Union performance snowboard bindings are stiffer, provide instant edge-to-edge response, and the most stable board connection possible. Performance bindings are generally best suited for intermediate to advanced snowboarders that enjoy high-speed carving or riding steep technical terrain.

Models:

Falcor

PRO MODEL

FALCOR

Technology Breakdown

.01 ASYM Forged Hybrid Highback
Forged Carbon Carving Power
+ Freestyle Flex

.02 Magnesium S1 Ratchets
Lightweight + Durable

.03 Non-Stick HP EVA
Closed Cell Finish - 100% Waterproof

.04 ASYM Halo Base Frame
Flexible Freestyle Frame
+ Connection Point

Hybrid 1.0 Ankle Strap .05
Cushioned Comfort and Flexibility
+ Instant Response

TS 6.0 Toe Strap .06
Dual Layer Construction
Perfect Boot-To-Binding Fit

Direct Connect MD Core .07
Stiff and Responsive Core
Instant Edge-To-Edge Connection

ASYM Molecular Bushing .08
Asymmetric Freestyle Flex
+ Cushioning and Shock Absorption

Falcor → Key Features

1. Baseplate

2 Layer Baseplate Construction

A traditional snowboard baseplate is made of a single layer with the same material and stiffness throughout. Union's all-new 2 Layer baseplate construction allows us to have two individual layers: the Core [1] and the Frame [2]. Each layer has the possibility of using a unique material and stiffness to achieve the desired ride feel of the binding.

Direct Connect MD Core

The all-new Direct Connect Mini Disk Base Core is stiff and responsive. This baseplate layer allows for the fastest possible transfer of energy from the rider to the snowboard that Union has ever achieved. Made with Eco-Friendly Duraflex Blue.

Asymmetrical Halo Base Frame

The Asymmetrical Halo Base Frame is softer and more flexible than our traditional baseplates, allowing for a unique new ride feel and increased side to side freestyle flex. The frame also plays the critical roll of connecting the baseplate core, bottom bushing, heelcup and ankle and toe straps together. Made with Eco-Friendly Duraflex Blue.

Falcor → Key Features

2. Bushing

Asymmetrical Molecular Bushing

More durable and more cushioned than traditional thermoformed EVA, Molecular Bushings act as a suspension system between the baseplate and the boards top sheet, to help reduce vibrations from harsh snow pack. The all-new asymmetrical bushing shape allows for increased freestyle flexibility and natural inward canting while riding.

Right Foot / Under View →

Falcor → Key Features

3. Highback

Asym Forged Hybrid Highback

Eco-Friendly Duraflex Blue and Italian made Forged Carbon combine to create a flex profile that compliments Travis Rice's aggressive freestyle riding. The stiff and responsive Forged Carbon spine allows for instant edge to edge control, while the nylon frame allows for freestyle flexibility and comfort. The updated asymmetrical shape follows the natural angle of the leg for a more anatomical fit and flex. 10% lighter than the previous generation of Falcor highbacks.

Duraflex Blue

4. Straps

Hybrid 1.0 Ankle Strap

Instant response meets all day long foot comfort. The Hybrid 1.0 ankle strap combines our responsive Exoframe exterior with the cushioned comfort and flexibility of the Forma interior. The all-new V cut shape allows riders to push forward into the ankle strap without pressure points. Lightweight, durable, and extremely comfortable, the Hybrid 1.0 ankle strap has quickly become a new freestyle team favorite.

TS 6.0 Toe Strap

Separating the exterior toe strap frame and interior rubber grip allows the rubber grip to form fit perfectly to any boot shape on the market today, while a new more integrated toe connector gives the the binding a more finished overall look.

Falcor / Men's Snowboard Binding | TRAVIS RICE PRO MODEL

Material Glossary

Plastics / Composites ▾

Duraflex XB

Duraflex XB is Union’s most technical nylon material to date. Stiff, responsive and super lightweight, this carbon injected partially sustainable nylon is made by steaming castor bean oil.

Duraflex Blue

Duraflex Blue nylon is made with 90% sustainable raw materials and is audited and certified by ISCC and TÜV Nord. This is Union’s first partially sustainable nylon material made from a mass-balance feedstock.

Duraflex CB

Duraflex CB nylon uses Union’s highest amount of fiber glass and is considerably lighter, stiffer and more responsive than our Daraflex ST material.

Duraflex ST

Simply put, Duraflex ST is the same material as regular Duraflex, but with increased fiber glass for more response without the weight. Designed for cold temperatures.

Duraflex

Duraflex material was specifically engineered to maintain consistent flex in a wide range of cold temperatures. Exclusive to Union for snowsports products.

Forged Carbon

Exclusive to Union, Forged Carbon exceeds the strength requirements of injected plastic tenfold and is the only carbon material that can be truly 3D shaped.

Bushings ▾

Molecular

More durable and more cushioned than traditional thermoformed EVA, Molecular bushing materials acts as a suspension system between the baseplate and the boards top sheet, to help reduce vibrations from harsh snow pack.

Vaporlite HD

High Density Vaporlite maintains the same dampening properties as traditional Vaporlite, but is more responsive and durable.

Fused Vaporlite +

20% lighter than the original and still just as water proof, durable and vibration canceling.

Fused Vaporlite

Fused Vaporlite sets new standards for vibration dampening and natural board flex. Industry first.

Thermoformed EVA

Shock absorption saves your heels and promotes a true and even board flex.

Non-Stick EVA

Non-Stick EVA sheds water and snow like nothing you’ve experienced before. Gone are the days of icy build up under your boots.

Metals ▾

Extruded Aluminum

Extruded aluminum is 100% pure and maintains its true shape no matter how much wear and tear you inflict upon it.

Magnesium

This Union exclusive process produces a material four times the strength of aluminum with only half the weight.

Grade 8.8 Steel

The strongest steel available on the market - Our use of grade 8.8 represents our commitment of delivering the strongest and most reliable bindings on the market today.

Titanium

Titanium is a lightweight, high-strength, low-corrosion metal used for hardware on select Union models.

Strap Material ▾

Hytrel

Hytrel combines the flexibility of rubber with the strength and processability of thermoplastics.

S.E.B.S.

Thermoplastic anti-slip rubber webbing keeps your boots locked in and on point.

Lycra Layered EVA

Lycra layered EVA is lightweight, durable and form fits any boot, make and model.

PU Layered EVA

PU layered EVA is waterproof, super durable and form fits any boot make and model.

Warranty

The Union Guarantee

Every pair of Union Bindings is injected with the highest quality Duraflex Nylon. The result is strength, safety and security. It also means having the confidence of a lifetime warranty on all baseplates and heel cups.

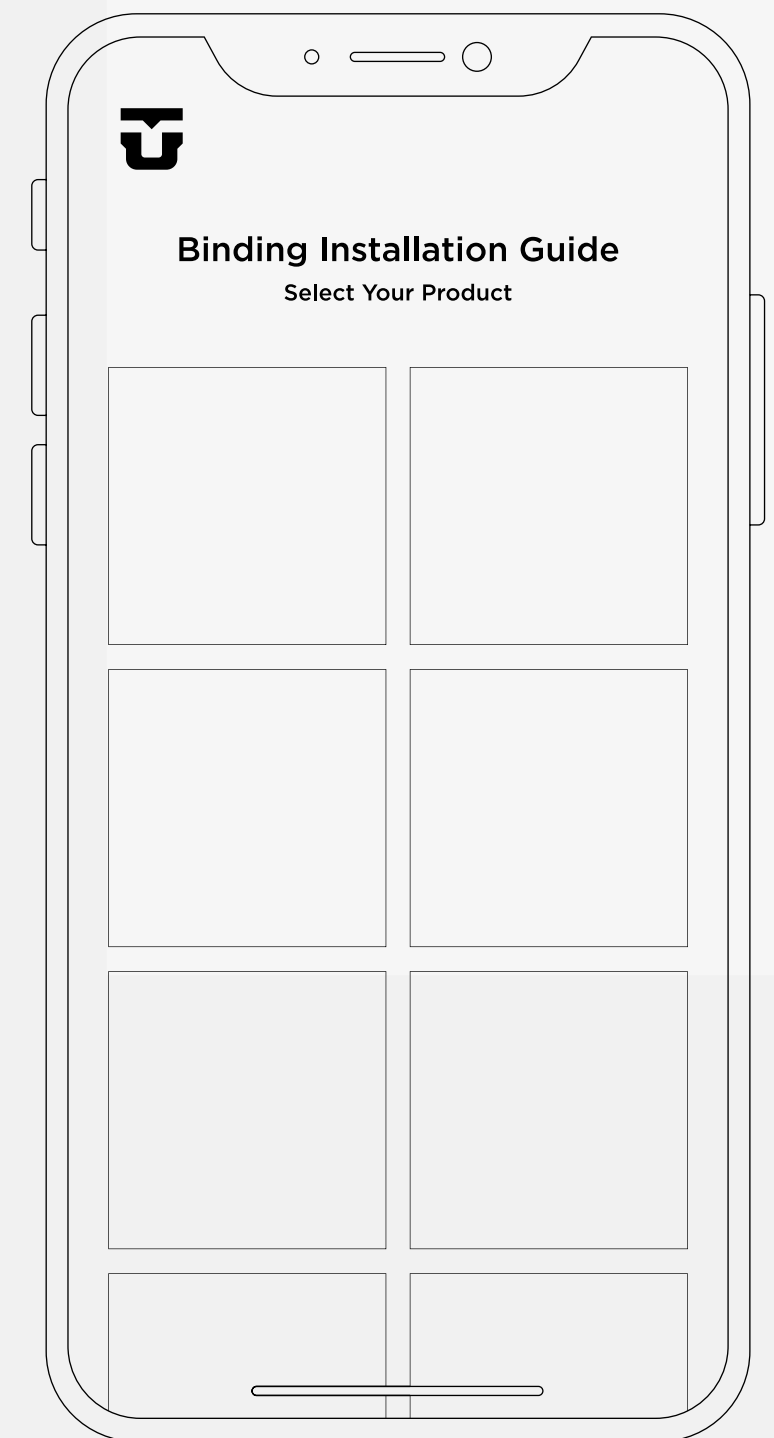

So, if you break, or even crack your baseplate or heelcup during riding, we'll replace it for life. Guaranteed. All backed up by the best customer service team in the industry.

Installation Guide

We've Gone Digital

Setting up bindings just got even easier. The Union digital installation guide is a step by step online guide to help customers get the perfect boot-to-binding fit everytime.
