SEASON 21: A BOLD NEW FUTURE

UNLOCKING POSSIBILITIES

Twenty years ago, Union Binding Company was founded on the idea of a simple, yet ambitious mission: to create the best-fitting, highest-performing, and most durable snowboard bindings the world has ever seen. Since our humble beginnings in 2004, Union has evolved into the global leader in snowboard bindings by relentlessly pushing the boundaries of innovation, performance, and design.

What truly sets Union apart is our refusal to settle for the status quo. We are constantly thinking of ways to improve the snowboarding experience, challenging ourselves to think beyond the present and the tangible, pushing the boundaries of what's possible, and unlocking new possibilities. For us, the journey of innovation never ends.

Season 21 marks a bold new chapter for Union, setting the stage for the next two decades ahead of us. We believe that ideas, determination, and people are the core of who we are today and the driving force behind where we're headed tomorrow.

Welcome to Season 21. Welcome the future of Union.

DESIGN & ENGINEERING

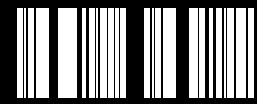

RESEARCH & DEVELOPMENT

FULL CIRCLE

CONSTANT PROGRESSION

Season 21 is all about connecting the dots for Union. With the addition of the Union Boot Division, the Union product circle is now complete. Although our product offering is evolving, our goal remains the same. Union has always been focused on building products to elevate the riders' on-snow experience.

STRONGER.

UNION BOOT DIVISION ↔

As lifelong snowboarders with decades of combined product and manufacturing experience, we felt that none of the global brands had nailed the perfect combination of production processes, fit, function, durability, and material innovation. So we got to work.

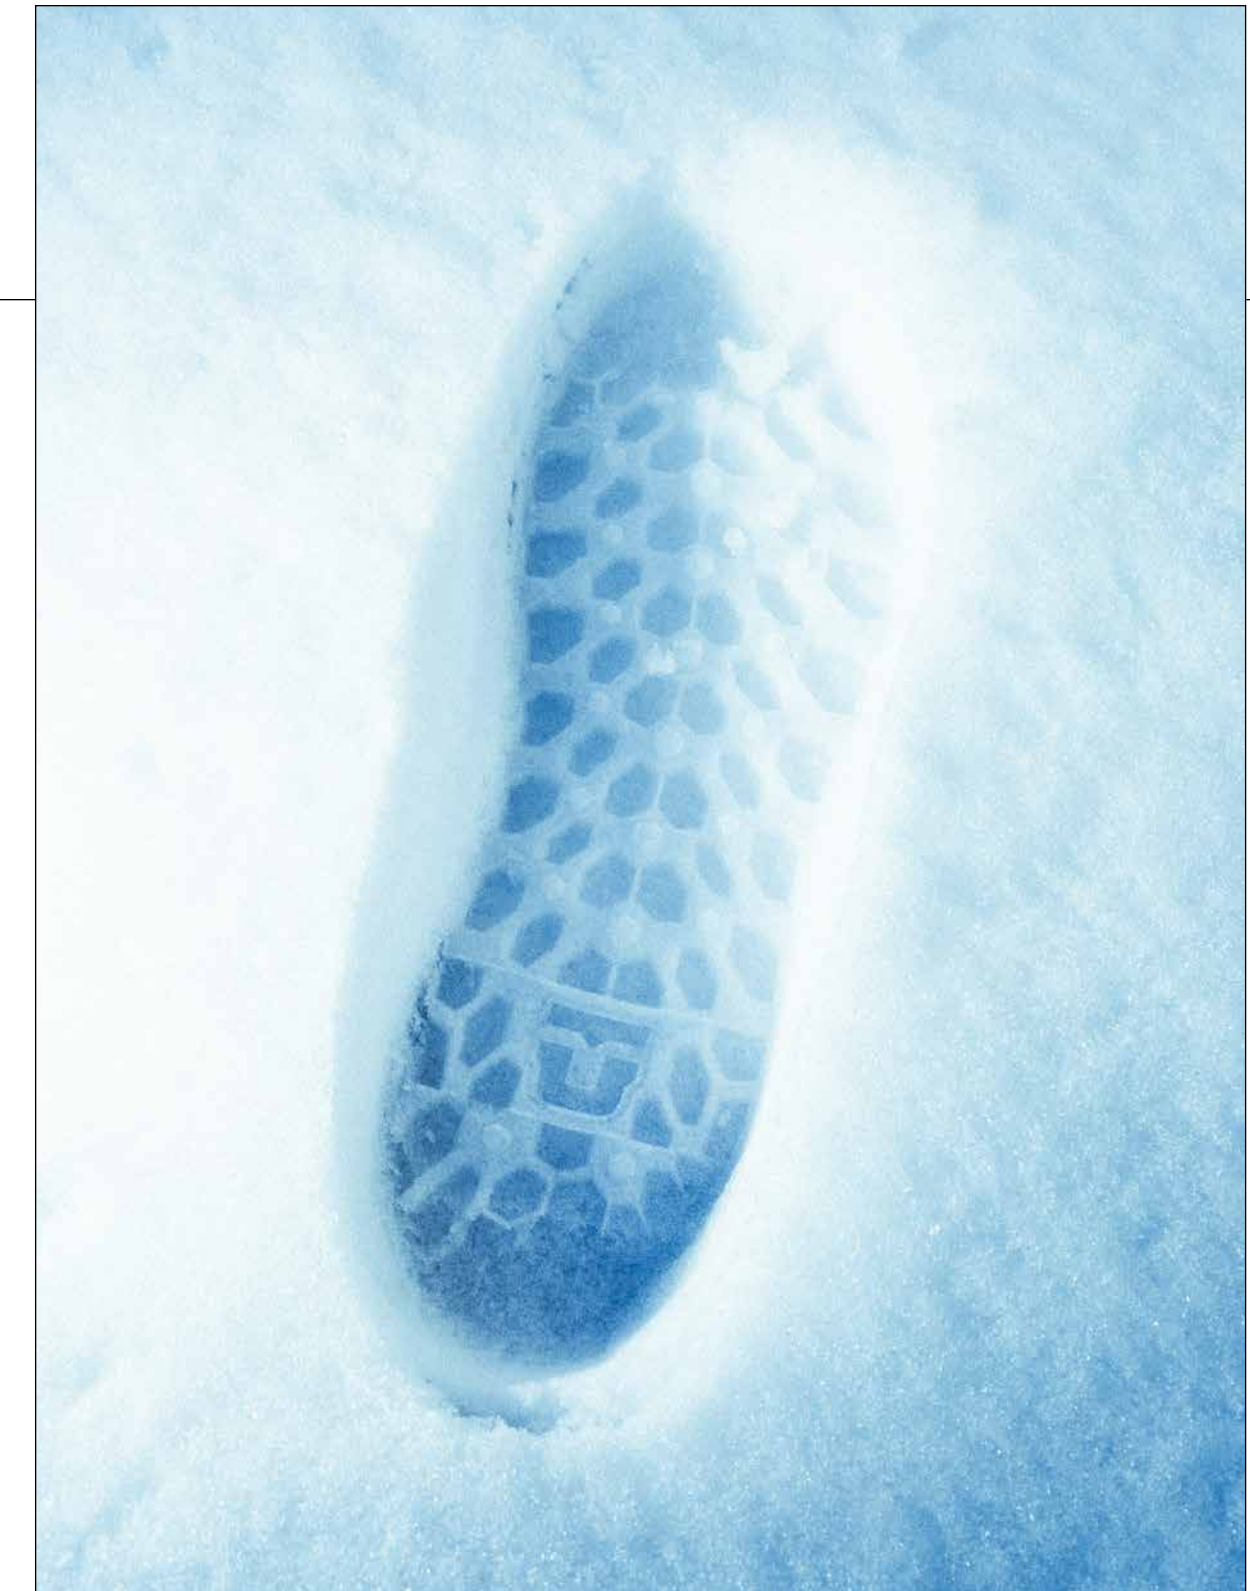

The team at Union has set a foundation for the world's most advanced snowboard boot ever developed. We've invested heavily in industry leading R&D, streamlined production processes, new machinery, materials, and people.

Our goal is simple: We aim to transform the snowboarding experience by building the world's best snowboard boots.

Our Mission ↘

Transform the snowboarding experience by building the world's best snowboard boots.

BACK TO MONTEBELLUNA →

CRAFTSMANSHIP + INNOVATION ↔

When you think of the world's leading design center for outdoor footwear, you can only think of one place—Montebelluna, Italy. For generations Montebelluna has been the leader in alpine boot craftsmanship and innovation. When we decided to invest in the boot category, there was no other option than right here in our own backyard.

Inside of the new Union Boot Division headquarters we control 100% of the product design, production process, and supply chain. By vertically integrating all our processes under one roof, we drastically lower production time of our boots while maintaining direct visibility over product quality. With decades of experience in snowboard specific materials, we can share materials between boots and bindings to easily surpass MOQ's while using exclusive materials not available to other brands.

③

③ FOOTBED

CONTACT FOOTBED

Contact 3D formed Dual Density Ortholite™ footbeds deliver a combination of performance and comfort unmatched by any insole manufacturer. Unlike traditional foam, Ortholite™ foam compresses less than 5% over the life time of the product, so the cushioning, fit, comfort and performance never change. Made with 5% recycled rubber.

④ BUSHING SYSTEM

REBOUND BUSHING SYSTEM™

The secret weapon hiding inside of every pair of Union snowboard boots. Union's Rebound Bushing System™ adds an additional layer of lightweight cushioning under your heels and toes to help reduce vibrations for the snow and eat up heavy impacts while riding. This unique layer of rebounding foam [1] paired with our phylon EVA midsole [2] helps to reduce foot fatigue and never loses shape or performance over time.

⑤ OUTSOLE

X-GRIP OUTSOLE

Union X-Grip Outsole is made with durable high performance natural rubber and provides excellent grip on snow and ice. Compared to other outsoles currently available on the market, Union's innovative new design features minimal thickness for increased board feel and riding performance.

8 LACE

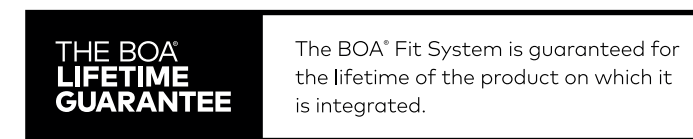

DUAL ZONE BOA®

Dual Zone BOA® lacing offers premium all mountain performance with two separate micro-adjustable zones. The tongue dial [1] controls the lace that tightens the upper zone to provide flex and stability, while the remote dial [2] adjusts lace tension and locks in the forefoot for greater response and control in the lower zone.

BOA® FIT SYSTEM FEATURING H4 COILER™ + H4

Rigorously tested and trusted. The BOA® Fit System featuring Dual-Dial H4 delivers revolutionary durability, micro-adjustable, precision fit, and fast release. Dial in your perfect fit.

BOA® TX3 LACE

The workhorse of the BOA® Fit System, BOA® laces routinely tolerate the toughest environments and field tests, and are expertly configured for precision and performance. Flexible and low-friction, the BOA® textile TX3 lace delivers high strength-to-weight ratio.

①

① MOUNTING SYSTEM

DIRECT CONNECT SYSTEM

Union's all-new Direct Connect System is just that — a direct connection between you and your snowboard. By fully removing the disk from the baseplate, Union has been able to drastically improve the reaction speed between the rider and the snowboard, increase baseplate strength, and simultaneously reduce the overall weight of the binding. Disks are a thing of the past. This all-new mounting system only relies on two screws and two washers to get the job done.

SOURCE FC → KEY FEATURES

②

BASEPLATE

TWO-LAYER BASEPLATE CONSTRUCTION

A traditional snowboard baseplate is made of a single layer with the same material and stiffness throughout. Union exclusive Two-Layer baseplate construction allows us to have two individual layers: the Core [1] and the Frame [2]. Each layer has the possibility of using a unique material and stiffness to achieve the desired ride feel of the binding.

FORGED CARBON DCS BASEPLATE CORE

The all-new Forged Carbon DCS Baseplate Core is stiff, responsive, and ultra-lightweight. Through extensive rounds of R&D the Union Lab was able to reduce the baseplate height by 10% getting you as close to the topsheet as possible. This baseplate layer allows for the fastest possible transfer of energy from the rider to the snowboard that Union has ever achieved. Made possible by Union exclusive Forged Carbon.

FC FORGED CARBON
UNION TECHNOLOGY SYSTEM-

XB HALO BASEPLATE FRAME

The XB Halo Base Frame is lightest baseplate Union has ever created, while still maintaining the mandatory strength-to-weight ratios needed to pass Union's strict durability tests. The frame also plays the critical role of connecting the baseplate core, bottom bushing, heelcup, ankle and toe straps together. Made with partially sustainable carbon injected Duraflex XB Nylon.

SOURCE FC → KEY FEATURES

③

③ BUSHING

HI-FLEX EVA BUSHING

More durable and more cushioned than traditional thermoformed EVA. Hi-Flex EVA bushings act as an additional layer of dampening and shock absorption between you and your snowboard and never lose shape over time. Your knees and feet will thank you. This all-new reduced volume bushing design allows the rider to be as close to the topsheet as possible.

④ HIGHBACK

S18 SOURCE FORGED CARBON HIGHBACK

The S18 Source Forged Carbon highback is 40% lighter than our standard nylon highbacks and extremely responsive edge-to-edge. Made in Italy using Union exclusive Forged Carbon.

⑤ HEELCUP

FORGED CARBON HEELCUP

Lightweight, responsive, and made in Italy. Union's Forged Carbon heelcups are 45% lighter than our standard Extruded Aluminum heelcups and still just as bombproof. Backed by Union's lifetime warranty guarantee.

SOURCE FC → KEY FEATURES

④

⑥ ANKLE STRAP

PHANTOM SLIM ANKLE STRAP

25% lighter than our standard Exoframe 4.0 Ankle Strap and still just as comfortable. The new Phantom Slim Ankle Strap features a smaller ratchet, smaller ladder, and a new streamlined lightweight ankle strap design to help reduce weight and materials as much as possible. You won't even notice that it's there.

⑦ TOE STRAP

TS 6.0 TOE STRAP

TS 6.0 toe straps keep you locked in for the ride down without letting you know they're there. A new, shorter buckle base helps to reduce weight and pressure points. Easily adjust to any boot with the quick turn of a lightweight titanium screw. This is the lightest toe strap on the market.

Source FC / Men's Snowboard Binding

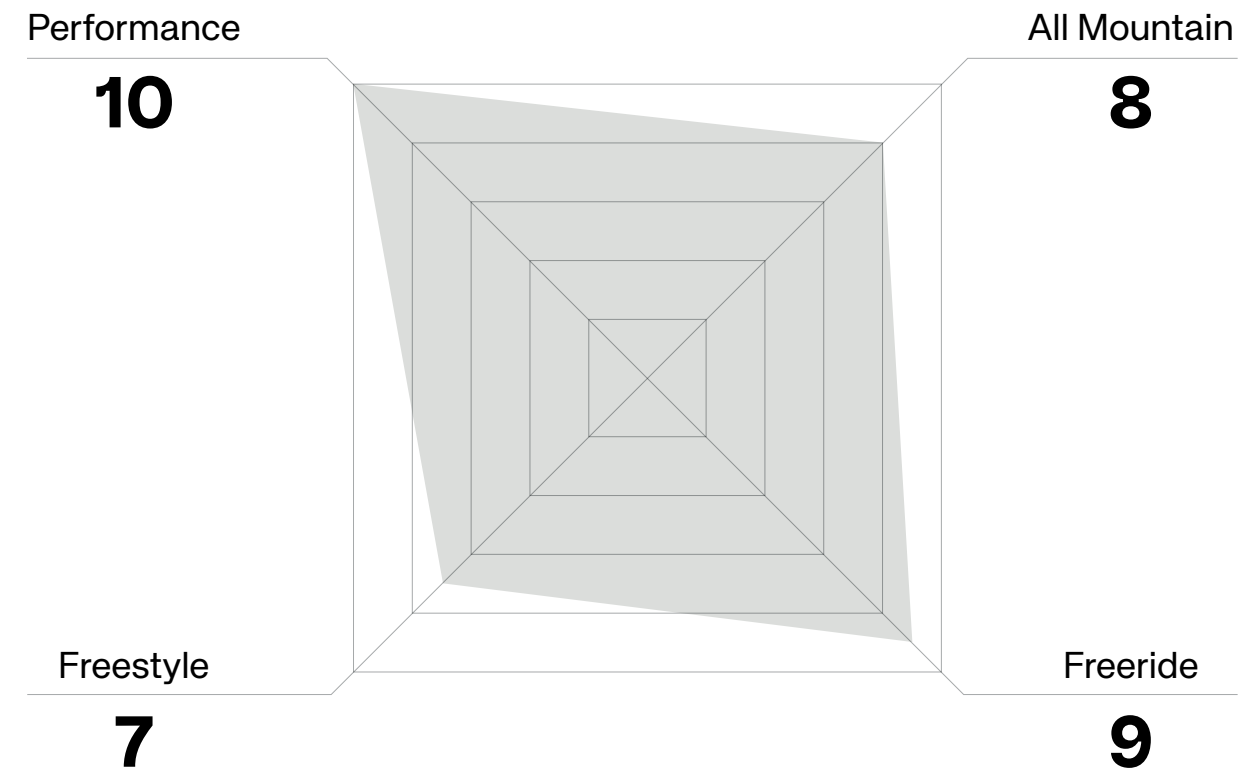

Product Description

The connection between the rider and the snowboard has never been closer. We've removed the mounting disk, reduced the baseplate height, shaved off hundreds of grams of excess material and completely changed the way that the rider's energy is transferred from the body to the snowboard. The Union Source FC puts you in the driver's seat, are you ready for the ride?

CREATING AN INDUSTRY STANDARD

BRANDS WORKING TOGETHER FOR SNOWBOARDING

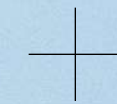

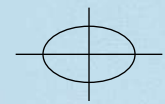

You've been asking, and we've been listening. We're excited to announce a partnership with Burton as we expand our line to offer a mechanical entry binding system. Together with Burton, we believe that there is an opportunity to come together as industry leaders to support snowboarding.

Like Burton, we are selective in our projects and our partners. Step On® is the right technology to bring our product offering to the next level, and Burton is the partner to do it. This partnership is the result of our shared commitment to establishing an industry-standard mechanical entry system for the wider binding ecosystem.

Starting in 2025, Union is 100% committed to the Step On® category.

UNION BINDING COMPANY ↔

The goals at Union are simple: continue to be a leader in clean energy, engage in social responsibility at a local level, and constantly develop cutting-edge technology and manufacturing techniques.

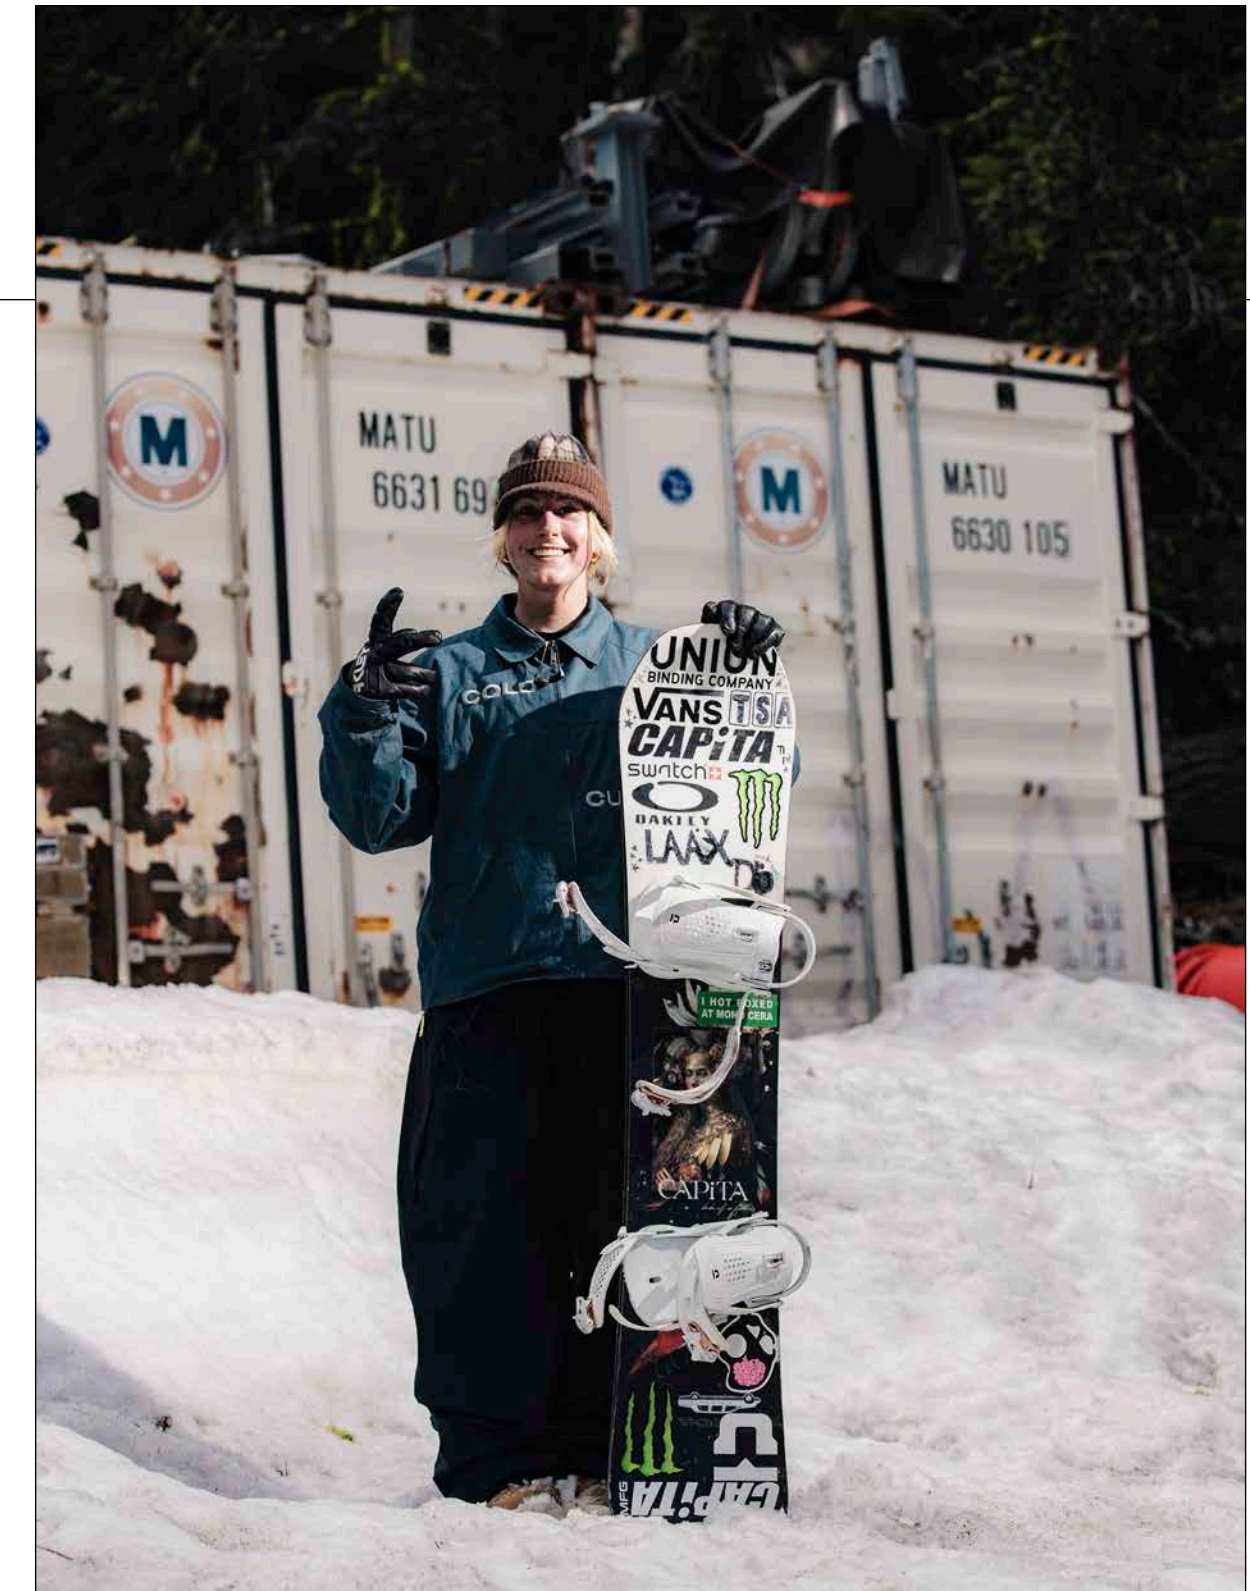

With three full production years under our belt, The Box has proven its investment return, setting new standards on quality and timely delivery. In a nutshell, we have increased production efficiency, contributed to our community, drastically reduced energy consumption in production, and passed these overall values to our customers.

Union is more than just a product to enhance your snowboard experience—it's a philosophy and way of life.

Our Mission ↘

Dedicated to manufacturing the best snowboard bindings on the planet.

Single Frame Shell™	Forma Pro Liner	Contact Footbed	Rebound Bushing System™	X-Grip Outsole	Dual Zone BOA®	BOA® Fit System Featuring H4 Series + TX3 Lace

BOOT MATERIAL GLOSSARY

UPPER ↘

Single Frame Shell™

Lightweight, super durable, waterproof Pebax material provides a reactive flex pattern while snowboarding and maintains its performance over the boot's lifecycle.

HF Premium Synthetics

Union's HF Premium Synthetic materials are wear resistant with welded construction for the utmost durability. All materials are locally sourced in Italy.

Tapered 3D Tongue

Union's Tapered 3D Tongue uses geometric shaping for comfort and provides increased room in toe box.

LINER ↘

Forma Pro Liner

This 100% custom-made memory foam liner form fits any foot out of the box and provides the support and performance that riders need for multiple 100+ day seasons.

Quick-Lock Lace Harness

Union's Quick-Lock Lace Harness is mitt / glove friendly and allows you to easily adjust tightness to distribute pressure evenly across your foot.

EPDM Ankle Pocket

Made with Ethylene Propylene Diene Monomer—a synthetic rubber material that acts as a cushioned memory foam to help lock in your heels and provide additional ankle support.

Heat Reflective Foil

Heat Reflective Foil is used to redirect heat underfoot and keep you riding for longer on those extra cold days.

UNDERFOOT ↘

Contact Footbed

Dual Density Ortholite™ footbeds are made with made with 5% recycled rubber and deliver a combination of performance and comfort unmatched by any insole manufacturer.

Rebound Bushing System™

Union's Rebound Bushing System™ adds an additional layer of lightweight cushioning under your heels and toes to help reduce vibrations for the snow and eat up heavy impacts while riding. This unique layer of rebounding foam helps to reduce foot fatigue and never loses shape or performance over time.

X-Grip Outsole

Durable, high performance natural rubber provides excellent grip on snow and ice. Made to last.

LACING ↘

Dual Zone BOA®

Dual Zone BOA® lacing offers premium all mountain performance with two separate micro-adjustable zones.

BOA® Fit System Featuring H4 Coiler™ + H4

Rigorously tested and trusted. The BOA® Fit System featuring Dual-Dial H4 delivers revolutionary durability, micro-adjustable, precision fit, and fast release.

BOA® TX3 Lace

The workhorse of the BOA® Fit System. Flexible and low-friction, the BOA® textile TX3 lace delivers high strength-to-weight ratio.

Step On® Channel Disk

COMPATIBILITY:
Channel

07.

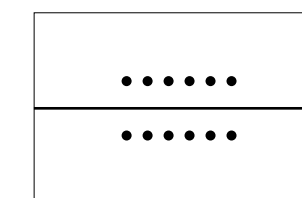

Explorer Split Disk

09.

Charger Split Disk

COMPATIBILITY:
Voile Split

08.

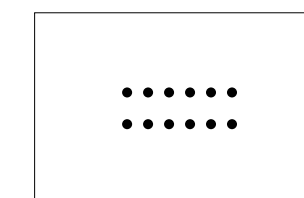

Explorer Quiver Disk

10.

Charger Quiver Disk

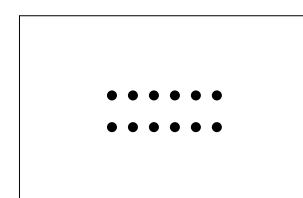

COMPATIBILITY:
4X2

06.

Direct Connect System

COMPATIBILITY:
4X2

BINDING MATERIAL GLOSSARY

PLASTICS / COMPOSITES ▾

Duraflex XB

Duraflex XB is Union's most technical nylon material to date. Stiff, responsive and super lightweight, this carbon injected partially sustainable nylon is made by steaming castor bean oil.

Duraflex Blue

Duraflex Blue nylon is made with 90% sustainable raw materials and is audited and certified by ISCC and TÜV Nord. This is Union's first partially sustainable nylon material made from a mass-balance feedstock.

Duraflex CB

Duraflex CB nylon uses Union's highest amount of fiber glass and is considerably lighter, stiffer and more responsive than our Daraflex ST material.

Duraflex ST

Simply put, Duraflex ST is the same material as regular Duraflex, but with increased fiber glass for more response without the weight. Designed for cold temperatures.

Duraflex

Duraflex material was specifically engineered to maintain consistent flex in a wide range of cold temperatures. Exclusive to Union for snowsports products.

Forged Carbon

Exclusive to Union, Forged Carbon exceeds the strength requirements of injected plastic tenfold and is the only carbon material that can be truly 3D shaped.

BUSHINGS ▾

Molecular

More durable and more cushioned than traditional thermoformed EVA, Molecular bushing materials acts as a suspension system between the baseplate and the boards top sheet, to help reduce vibrations from harsh snow pack.

Vaporlite HD

High Density Vaporlite maintains the same dampening properties as traditional Vaporlite, but is more responsive and durable.

Fused Vaporlite +

20% lighter than the original and still just as water proof, durable and vibration cancelling.

Fused Vaporlite

Fused Vaporlite sets new standards for vibration dampening and natural board flex. Industry first.

Thermoformed EVA

Shock absorption saves your heels and promotes a true and even board flex.

Non-Stick EVA

Non-Stick EVA sheds water and snow like nothing you've experienced before. Gone are the days of icy build up under your boots.

METALS ▾

Extruded Aluminum

Extruded aluminum is 100% pure and maintains its true shape no matter how much wear and tear you inflict upon it.

Magnesium

This Union exclusive process produces a material four times the strength of aluminum with only half the weight.

Grade 8.8 Steel

The strongest steel available on the market. Our use of grade 8.8 represents our commitment of delivering the strongest and most reliable bindings on the market today.

Titanium

Titanium is a lightweight, high-strength, low-corrosion metal used for hardware on select Union models.

STRAP MATERIAL ▾

Hytrel

Hytrel combines the flexibility of rubber with the strength and processability of thermoplastics.

S.E.B.S.

Thermoplastic anti-slip rubber webbing keeps your boots locked in and on point.

Lycra Layered EVA

Lycra layered EVA is lightweight, durable and form fits any boot make and model.

PU Layered EVA

PU layered EVA is waterproof, super durable and form fits any boot make and model.

WARRANTY

THE UNION GUARANTEE ↘

Union is proud to use the highest-grade materials available on every single product that we produce. Wherever you see the "U" logo, you can have the confidence that no sacrifices have been made.

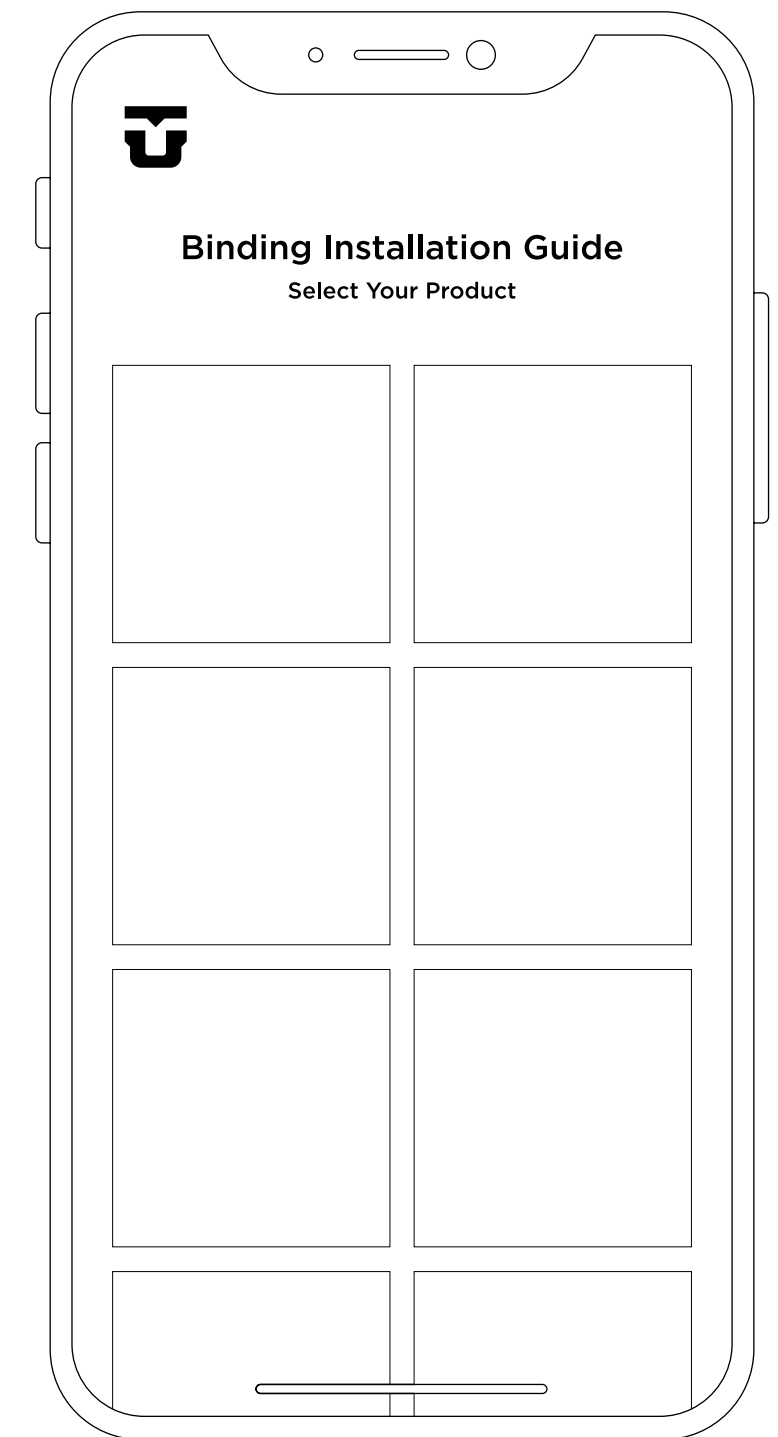

All Union products are covered against defects in materials or workmanship for one year from the date of purchase (two-year coverage in EU). Binding baseplates and heelcups are covered for the lifetime of the product.

INSTALLATION GUIDE

WE'VE GONE DIGITAL ↘

Setting up bindings just got even easier. The Union digital installation guide is a step by step online guide to help customers get the perfect boot-to-binding fit everytime.
