

**FOREVER
SNOWBOARDING**

DEALER MANUAL
SEASON 2026 - 2027

You're looking at yet another Nitro Product line. And I hope you'll be as excited discovering our new products as much as we were developing them. The core of Nitro's research, development and design team is a small but highly dedicated group of people who ride. We live and breathe snowboarding, day in, day out, 365 days a year.

Nitro is not about fast turnover of inventory and staff, not about being handed down from one owner to the next, with one management after another. We live consistency. If you have worked with us long enough, you will find that you've been talking to the same people year after year.

We care and we're here for you and your customers. 100% commitment from our designers and engineers, the team riders on all levels, as well as our production, logistics and sales team. But each of our family is as important as you, the retailer, and ultimately: our clients. The people out on the snow who we all respect and strive to provide the best product for.

Thank you for your ongoing support - at Nitro, we're grateful to continue our humble journey alongside all the noise around us. Snowboarding is at our core, and we'll always stay committed to the sport and the people who make it what it is.

MARKETING PROJECTS

THE WOMEN'S

QUIVER

VIDEO PROJECT

The women's Quiver video project! To help promote Christy Prior's involvement in the Quiver series and share the excitement for the series, we are planning to create a women's specific trip and short film with the Nitro women's team, which will be released in Fall 2026.

THE

ALTERNATOR

VIDEO PROJECT

With the introduction of Mateo Massitti, Yuto Yamada, Torgier Bergrem, and Sean Miskiman, we are creating a short video around the new crew to showcase the All-Mountain power and energy that the Alternator provides—a video to support the upcoming Alternator Campaign in Fall 26.

GOOD TIMES CAMPS

We are building on the momentum and will continue to share the experience of Nitro with the community. A camp created over a decade ago to allow anyone and everyone to join the Nitro family on and off the mountain and connect with all layers of Nitro. We are continuing to expand the camps and share the experience.

FIELD TRIP SERIES

The continuation of the Nitro YouTube video series, Field Trip, showcases team shoots and trips with the global Nitro team, the Nitro women's team, and beyond. A series that showcases what it's like to ride with the Nitro family and to inspire people to go out and ride with their friends. A multi-episode series will be released at the start of the winter season.

FOREVER SNOWBOARDING CAMPAIGN

Nitro snowboards campaign „Forever Snowboarding“ will be fueled with videos, images, and projects to help showcase and explain what Forever Snowboarding means to us, the riders, and snowboarders, to help build a stronger connection between Nitro and the community.

NITRO BOARDS - ULTIMATE DIVERSITY

Snowboards built for every style of rider

NITRO

SNOWBOARDS BUILT FOR EVERY STYLE OF RIDER

„The Mercy is my all-time favorite jib board. It's playful, stable, and absolutely destroys in the park.“

- BRANTLEY MULLINS

„The Alternator is our go-to board for anything groomed and non-groomed. From light trees, wide open faces, and side hits, this directional board has got your back.“

- YUTO YAMADA

"The T¹ is a timeless board and graphic for Nitro every year! I grew up watching some of my favorite pros riding it and here I am today carrying the torch. The T¹ is the freestyle park board of my choice with a nice medium flex that keeps it playful yet responsive when you need it to be. Pressing on rails, to big jumps, or even cruising the halfpipe this board can do it all!"

- SAM TAXWOOD

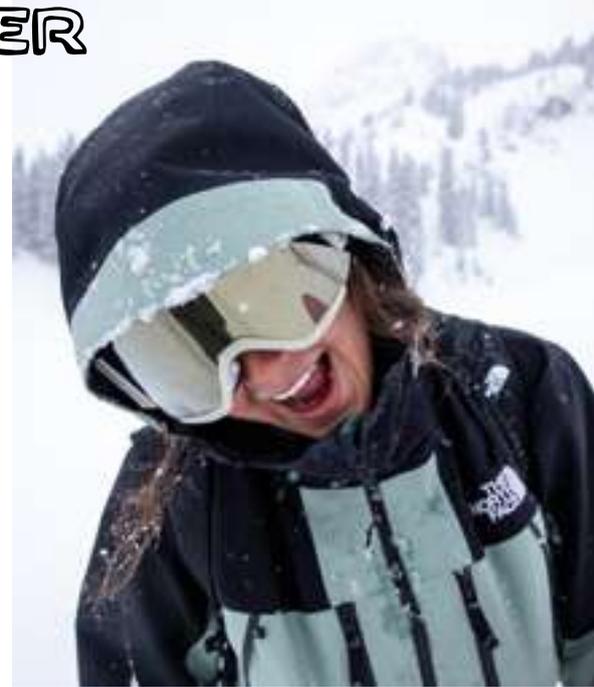

FORSEVER SNOWBOARDING

"Any day is a Squash day! I know I can't go wrong when I grab this board in the morning after a decent dump. It'll float me through the fresh but will still be loads of fun when it gets choppy or if - god forbid - the resort decided to groom all the pow down to corduroy and I decide to put it on its edges!"

- TOMMY DELAGO

SNOWBOARDS BUILT FOR EVERY STYLE OF RIDER

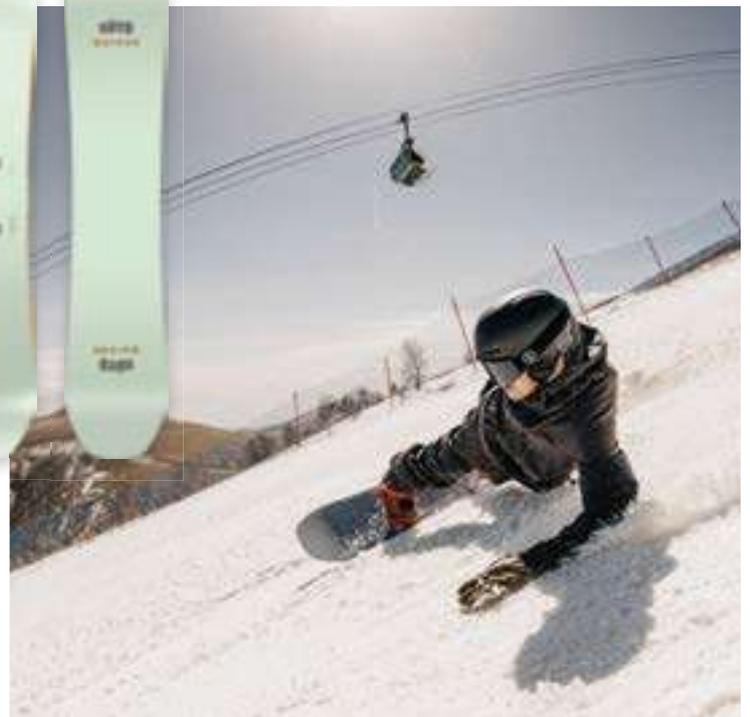

„This board is so fun in the park; the camber gives it springy pop, and the flex pattern ensures stomped landings. Purple has always been my favorite color. My name means bright as the rainbow, and I've carried butterflies with me my whole life - seeing them at certain times has felt coincidental and meaningful. The transformation from caterpillar to butterfly pertains to many parts of our lives. Growth is a process; break out of your cocoon and be YOU"

- IRIS PHAM

"The Basher is one of the most fun boards I have ever ridden and my favorite friendly freestyle all-mountain board because it offers a universally fun flex and float if you like carving at slower speeds, buttering the rollers, and just mellow freestyle riding in and out of the park!"

- KNUT ELIASSEN

ENVIRONMENTAL RESPONSIBILITY

At Nitro, we believe transparency is essential when it comes to environmental responsibilities. That's why we measure and share the CO² output of every snowboard we build. We know snowboard manufacturing is not perfect and impacts the environment, so we are committed to continuously looking for new ways to improve materials, processes, and sustainable production practices to reduce it without sacrificing performance or durability. Through the Nitro Community Fund, we are working to balance the greenhouse gas emissions of our snowboard production while investing in projects that support both the environment and the snowboard community. Today our boards are produced with 100% solar power, FSC®-certified wood cores, water-based inks, and as many recycled material alternatives as possible. This is an ongoing journey - one with challenges and big steps forward, but it's a path and run we are excited to take together with you.

nitro QUIVER

The legendary Quiver Series began as a modest three-board offering, featuring a rail, an all-mountain, and a powder snowboard, and has evolved into a fun zone where we freely explore new ideas, shapes, and materials to continue broadening the horizon of what snowboarding has to offer. Since its inception, the Quiver Series has been continuously driven by Nitro team rider Bryan Fox and Nitro Snowboards' co-founder and board shaper Tommy Delago's passion for perfecting the ride. This season, Christy Prior has joined the crew to bring her passion for shapes and women's snowboarding to the Quiver Series, helping to create more women-specific boards, sizes, and aesthetics.

CHRISTY PRIOR

„Having a quiver is so lush. It's such a decadent way to explore all the different feels snowboarding offers. I love how different shapes and flex patterns can completely switch up my on-hill experience from day-to-day, run-to-run, not only by keeping it fun and exciting but also from what I learn about my riding along the way.“

- CHRISTY PRIOR

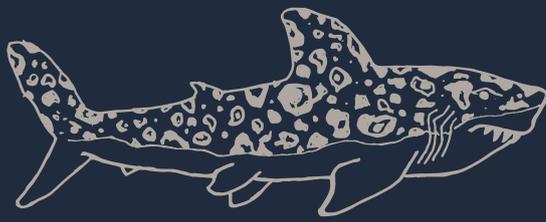

TOMMY DELAGO

“Designing boards for the Quiver series allows us to dream up any concept that we think might work and make it a reality – no matter what sales perspectives, margins or the market might dictate. It's the ultimate shaper's heaven, and having Christy on board now is opening up a whole new box of ideas and opportunities!”

- TOMMY DELAGO

FORNBERG SNOWBOARDING

BRYAN FOX

"For this year's Quiver graphics concept, I kept it simple and clean to keep the boards timeless—small drawings of random stuff between the bindings, gloss on matte. Sometimes, I spray paint boards and draw stuff with a paint marker. These came from some random doodles I did on a spray-painted board from last winter. We brought Christy Prior into the mix for a couple of the new sizes and a new model."

- BRYAN FOX

BANKER

QUIVER - The Official Turning & Burning Champion

BRYAN FOX
TOMMY DELAGO

- NEW SHAPES
- SLIGHTLY WIDER
- NEW 148 & 152 WOMEN'S SIZES
- BEST SELLING QUIVER BOARD
- MOST VERSATILE QUIVER MODEL
- QUIVER ECOLAB

DESCRIPTION

Start clearing space on your top shelf! The Banker will bring home some serious banked slalom hardware. Its directional all-mountain shape will help you fly through carved turns on and off the groomed runs. We have expanded the size run, making it the most versatile board for men and women in the Quiver Series. This is Bryan's, Tommy's, Christy's, and the Nitro Team's favorite ATV Quiver board for a reason.

"The Banker is my ATV everyday love, its my go to snowboard for a reason." - BRYAN FOX

"The Banker has been my favorite All-Mountain Carver since we first designed it, and the added with makes it even more fun. It holds an edge at higher speeds, yet is nimble and playful in the pow, and doesn't stress you out on that last run back down to the parking lot at the end of a long day out" - TOMMY DELAGO

CHARACTERISTICS

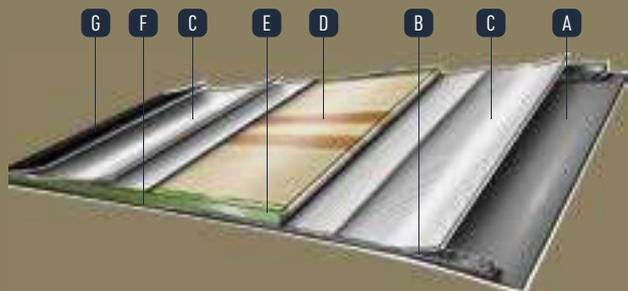

- Shape: **Directional** - The most versatile all-mountain shape
- Camber: **True** - Full control and pop
- Profile: **Reflex Core Profile** - Better torsional control
- Width: **Mid-Wide** - Exactly enough platform for most boot sizes
- Sidecut: **Progressive** - Powerful turns and a catch-free nose

MASTERCARVE

QUIVER - The New All-Mountain Fun Carver

TOMMY DELAGO

- ALL-NEW FUN CARVER
- MID-WIDE
- ALUMINUM TAIL PROTECTION
- QUIVER ECOLAB

DESCRIPTION

Introducing the Quiver Series' first carving board, the MasterCarve. An all-mountain soft boot carving experience for those looking to tear up the groomers with unparalleled edge control and speed. Its progressive sidecut, mid-wide width, and precision torsional flex allow intermediate to expert riders to take their carving capabilities to the next level—get ready to go low and let your style flow through every turn this season!

"I've been thinking about this one for a while. The MasterCarve is inspired by the early carving boards of the late 80's, when they were still wide and before the asym hype kicked in, but already designed with modern shaping principles. A true fun carver, designed to lay down turns without the stress factor of a race board!" - TOMMY DELAGO

CHARACTERISTICS

- Shape: Directional - The most versatile all-mountain shape
- Camber: Trüe - Full control and pop
- Profile: Standard Core Profile - Even flex and control
- Width: Mid-Wide - Exactly enough platform for most boot sizes
- Sidecut: Progressive - Powerful turns and a catch-free nose

FOREVER SNOWBOARDING

QUIVER 125

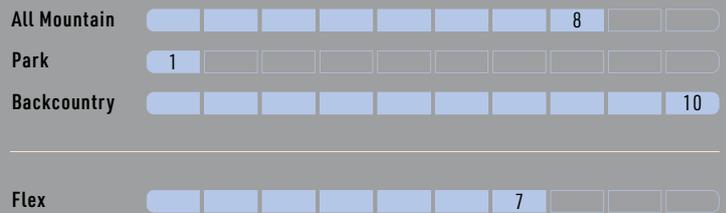

- NEW WOMEN'S EXCLUSIVE FISH
- DESIGNED WITH CHRISTY PRIOR
- 'IKA' MEANS 'FISH' IN MAORI LANGUAGE
- MID-WIDE
- QUIVER ECOLAB

DESCRIPTION

Designed with snow and surf lover Christy Prior, the new Ika provides the perfect float and agility for riders looking for a stable and fast ride through deep, low angle pow runs. The tapered swallowtail fish shape offers quick edge-to-edge precision on and off the marked trails and can generate mind-blowing speed and float on the deepest of days. For adventure-seeking riders looking for something new to ride!

„This surf-inspired shape was born from the desire to continue exploring the simplistic joy of turning and carving on a snowboard. Like New Zealand's native Māori language, the name Ika is derived from, which embodies the values, beliefs, and connection to the natural and spiritual realms; the Ika encourages a deeper connection to your on-hill experience with the hopes to inspire you to draw out your turns and connect with your own rhythm, feeling and flowing your way down the mountain.“ – CHRISTY PRIOR

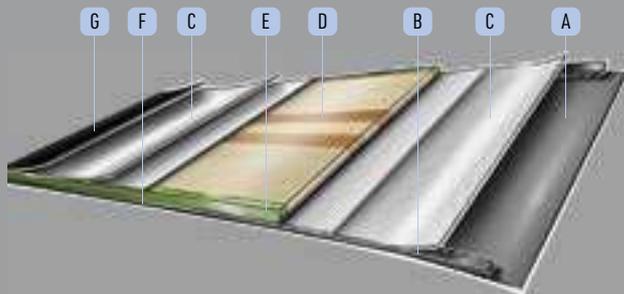

CHARACTERISTICS

- Shape: Tapered Swallowtail – Floatation and control even in the deepest stuff
- Camber: Cam-Out – Fun, responsive and forgiving
- Profile: Reflex Core Profile – Better torsional control
- Width: Mid-Wide – Exactly enough platform for most boot sizes
- Sidecut: Progressive – Powerful turns and a catch-free nose

CONSTRUCTION

- A: Sintered EcoSpeed HD Base**
Sustainable, durable, and fast

BASHER

QUIVER – The Original Friendly Freestyle ATV

KNUT ELIASSEN

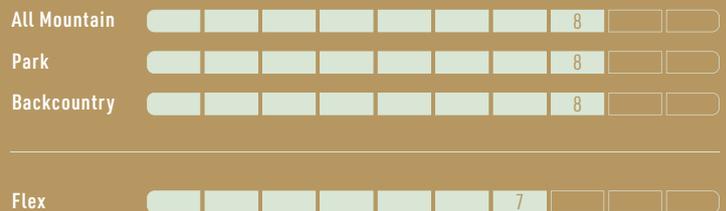

- 3D TWIN TECH AND ASYM SHAPE
- FRIENDLY FREESTYLE ATV FUN STICK
- A PRO LEVEL OPTISYM
- QUIVER ECOLAB

DESCRIPTION

If you enjoy cruising, jibbing, and carving up the whole mountain at a fun freestyle pace, then the Basher is for you. Based on the Optisym's asymmetric „Friendly Freestyle“ ride and upgraded 3D Twin Tech features, it allows for deep carves on groomers, but has the perfect playful park flex and enough float to maximize those precious powder days.

“The Basher is one of the most fun boards I have ever ridden and my favorite friendly freestyle all-mountain board because it offers a universally fun flex and float if you like carving at slower speeds, buttering the rollers, and just mellow freestyle riding in and out of the park!” – KNUT ELIASSEN

CHARACTERISTICS

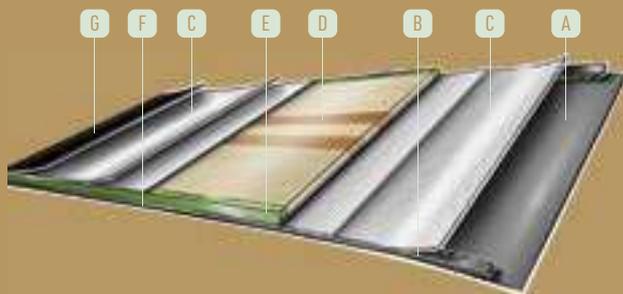

- Shape: **Asym Twin** – Effortless turns and full control
- Rocker: **Flat-Out** – Float, pressability and forgiveness
- Profile: **Reflex Core Profile** – Better torsional control
- Width: **Mid-Wide** – Exactly enough platform for most boot sizes
- Sidecut: **Dual Degressive** – Smooth and forgiving
- Plus: **3D Twin Tech** – The ultimate all terrain experience

3D TWIN TECH

As a twintip evolution of our 3D Surf Tech bottom, 3D Twin Tech is blending a convex nose into a concave center section, and back into a convex tail. This innovative bottom shape gives you a loose and surfy feel no matter if you're going forward or switch, combined with a controllable mid-section for the ultimate all-terrain freestyle experience.

CONSTRUCTION

DINGHY

QUIVER – The Wider Powder Wayfarer

BRYAN FOX

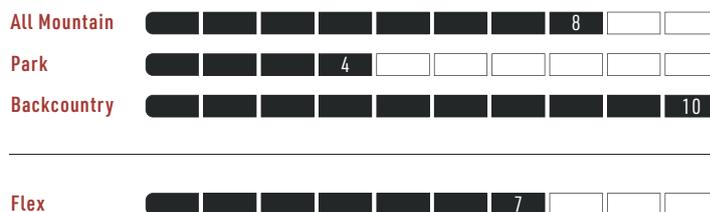

- SHOP KIDS' FAVORITE
- VOLUME SHIFTED MODEL
- LARGE FOOT QUIVER OPTION
- QUIVER ECOLAB

DESCRIPTION

The team favorite, Quiver Dinghy, is not just a snowboard; it's a versatile companion for any rider. With its wider shape, it's designed to excel in powder and groomers alike. Whether you're tackling low-angle tree runs, deep pow days, or wide-open runs, the Quiver Dinghy is your trusty partner, always ready to perform.

CHARACTERISTICS

- Shape: **Tapered Directional** – Floatation and easy maneuvering
- Camber: **True** – Full control and pop

FIN TWIN

QUIVER - The Versatile Shortboard

BRYAN FOX
CHRISTY PRIOR

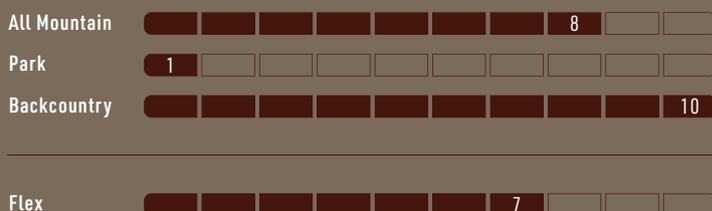

- VOLUME SHIFTED MODEL
- NEW 141 WOMEN'S SIZE
- AFFORDABLE QUIVER MODEL
- QUIVER ECOLAB

DESCRIPTION

The FinTwin is the most versatile shortboard on the mountain: A do-it-all swallowtail board that focuses on bringing the best shape, features, and flex at an affordable price to allow everyone to have fun in powder conditions, tree runs and spring slush by merging Bryan's, Christy's, and Tommy's know-how and passion for snow surfing!

"The flex and volume-shifted shape makes the Fintwin so zippy and playful when ripping around on groomers and in pow. Big fan of the smaller 141 size - The Fintwin is definitely a key part of my travel quiver - this one floats good!" - CHRISTY PRIOR

CHARACTERISTICS

- Shape: **Tapered Swallowtail** - Floatation and control even in the deepest stuff
- Camber: **Cam-Out** - Fun, responsive and forgiving
- Profile: **Standard Core Profile** - Even flex and control
- Profile: **(141cm) Reflex Core Profile** - Better torsional control

- GRAPHICS BY SETH NEARY AND LUKAS GOLLER
- LIMITED EDITION - SINGLE SEASON DROP
- MARKETING FOCUS

DESCRIPTION

Introducing Nitro's new Guest Shaper Series board, the Nitro OG. The brainchild of the Nitro OG team riders, Fabien Rohrer, Seth Neary, Lukas Goller, Max Plötzenecker, Tom Eberharter, and Jonas Hagström, who have been passionate about progressing freestyle snowboarding, graphics, design, and style for over 30 years. These riders are „OG“ Pro Riders who continue to shred on and off the mountain to this day. They wanted to bring back some old-school pop, width, and style into a new snowboard with today's performance materials and flex design - to provide a new all-mountain freestyle ride to allow riders to continue to push their limits and enjoy the turn, butter, airtime, slide, and pop in and out of the park like back in the day.

With 200+ years of combined experience and Nitro Snowboards co-founder Tommy Delago at the helm, the six OGs collaborated to design three freestyle weapons built for everyday terrain. Featuring precision power-steering sidecut, traditional camber with super pop, a tapered tail, and a skate-inspired shape, these boards fuse heritage with innovation - delivering both power with style. From hot laps in the park and sidehits with friends to tight trees, groomers, and pow, these boards define versatility. The OG Team designed boards that embody a lifetime of passion, creativity, and progression.

CHARACTERISTICS

HIGHLANDER

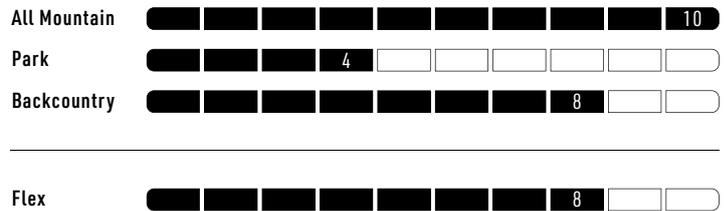

MEN'S | ALL MOUNTAIN – Built for High Speeds with Lightweight Precision

- PRO SHOP SPECIAL
- NITRO'S MOST ADVANCED CONSTRUCTION
- 3D TOPSHEET DESIGN
- SMOOTH HIGH-SPEED RIDE

DESCRIPTION

This all-mountain masterpiece has been redesigned specifically for experienced riders looking for an ultralightweight ride, engineered for versatility, speed and precision all over the mountain. The KORROYD® PowerLite core keeps the weight at a record minimum, and the new 3D topsheet with Antiphase Technology reduces unwanted chatter, providing the smoothest ride in the Nitro lineup, on and off the marked trail.

CHARACTERISTICS

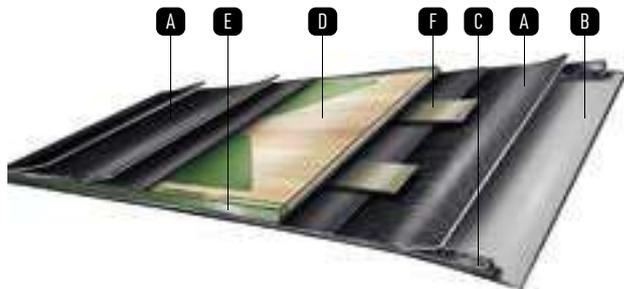

- Shape: **Directional** - The most versatile all-mountain shape

SEAN MISKIMAN

TORGEIR BERGEM

"The Alternator is a board I toss my bindings on in November and never take them off until the spring. It's a one stop shop for all your terrain needs. The Alternator gets the job done in any situation and I wouldn't want it any other way. Haul Ass, Go Big, One Love."

- GRIFFIN SIEBERT

"The Alternator, my one true love, a board that oversees everything. Fun when cruising, yet aggressive when charging your hardest. No matter the vibe, the Alternator reflects your emotions in all circumstances. I never doubt what I put in front of this board, and I am consistently blown away. The stability of the Alternator riding something big, or going as fast as you can, no matter the conditions, is what really fires me up."

- MATEO MASSITTI

ALTERNATOR FX

MEN'S | ALL MOUNTAIN – Built For The All-Mountain Maniacs!

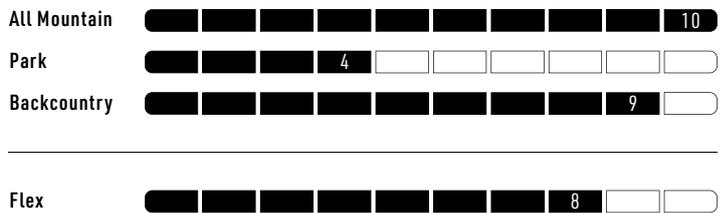

- FULL SIZE RUN
- HIGHLY TRENDING BOARD SHAPE
- DEVELOPED BY TOP ALL-MOUNTAIN PROS
- PROVEN BESTSELLER

LET THE SPIRITS GUIDE YOU.

„Ride with Love and let the spirits guide you“

The streetwear label „Love Distribution“ designed this board to spread good vibes – colorful, and full of positive energy. Whether you're in the park, on the street, or deep in the backcountry, let the spirits guide your ride.

Just like Francis of Assisi, who stands for humility, compassion, and a deep love for nature and all living beings, we believe in riding with kindness and respect for the world around us. His teachings remind us to stay humble, playful, and connected to the spirit of nature – qualities that perfectly align with the free-spirited vibe of our board. Stand out. Stay playful. :)

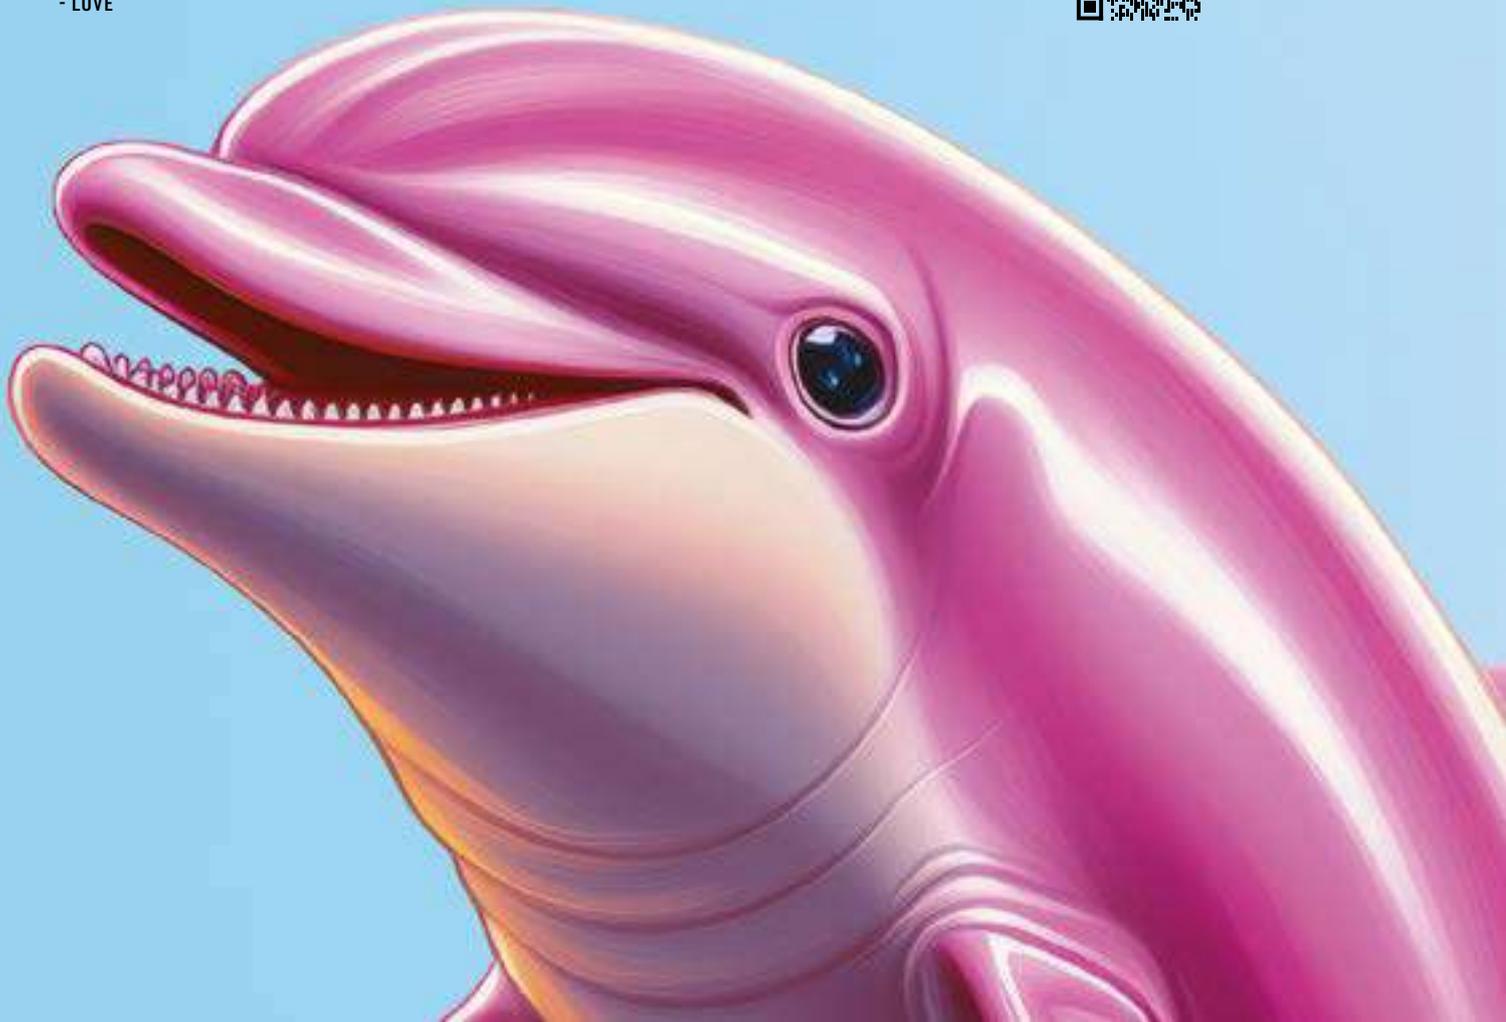

Don't follow the white rabbit... follow the pink dolphin!

HAILEY
GOES GLAM
ONE LAST

NITRO

"I feel a lot of gratitude to have the opportunity to help open doors for more women in the backcountry. The Alternator is a board I have always envied. Some of the best backcountry riders choose this board as their board of choice in the mountains, and now we've included more sizes with women in mind. This year's graphic is my favorite to date. It is a combination of sophistication and class, but still has that edge, with something to please everyone's eye. A graphic to reflect any rider who straps into the Alternator."

- HAILEY LANGLAND

ALTERNATOR X HAILEY LANGLAND

FOREVER SNOWBOARDING

DROP

WOMEN'S | ALL MOUNTAIN – The Versatile Fun Slasher!

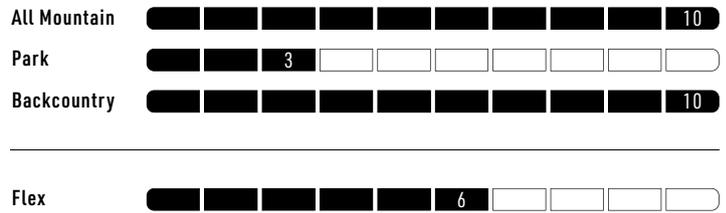

- SNOW DEMO FAVORITE
- FUN-DRIVEN ALL MTN SHAPE
- POWER PODS
- CELIA PETRIG'S ALL MTN POW BOARD

DESCRIPTION

Designed for creative boarders looking to surf the whole mountain with its versatile, fun, and directional pow shape, the Drop offers reliable edge hold and forgiving catch-free contact points to help you quickly evolve your style and technique. The snowboard philosophy with the Drop under your feet is simple - a versatile shape, more volume, less stress, and more fun on any type of terrain.

„The Drop speaks for itself. Its effortless float in the powder, combined with a precise and quick snap to do slashes, tight and perfect turns on fresh groomers, or just navigating yourself through sneaky tree runs, is unique. The beautiful artwork and very versatile shape make it my top choice for everyday cruising.“ - CELIA PETRIG

CHARACTERISTICS

- Shape: **Directional** - The most versatile all-mountain shape
 Camber: **Cam-Out** - Fun, responsive and forgiving
 Profile: **Standard Core Profile** - Even flex and control
 Width: **Standard** - Quick response and edge control
 Sidecut: **Dual Degressive** - Smooth and forgiving
 Plus: **Power Pods** - Step up your carving game

"The new Fate Pro with the black cat is fun, bold and a little wild. Perfect for the park and beyond!"

- COOL WAKUSHIMA

FATE PRO

WOMEN'S | PARK - Pro-Caliber Freestyle Performance

- PRO-LEVEL WOMEN'S ALL-MOUNTAIN FREESTYLE MODEL
- GRAPHIC INSPIRED BY TEAM RIDERS
- BALLISTIC IMPACT PANELS
- MARKETING FOCUS

DESCRIPTION

The Fate Pro is built for the riders looking to step up their game all over the mountain and push their limits in and out of the park. This timeless directional twin silhouette shape is equipped with pro-caliber pop, stability, and upgraded durability to allow you to ride faster than all your friends and stomp tricks as you continue to progress past your wildest dreams. The Fate Pro is Cool Wakushima, Miyabi Onitsuka, Laurie Blouin, Hahna Norman, Bea Kim and the rest of the Nitro 's Pro Teams' go-to board for continuous progression on and off camera!

CHARACTERISTICS

- Shape: **Directional Twin** - The best of both worlds
 Camber: **True** - Full control and pop
 Profile: **Reflex Core Profile** - Better torsional control
 Width: **Standard** - Quick response and edge control
 Sidecut: **Dual Degressive** - Smooth and forgiving

FOREVER SNOWBOARDING

„This board is so fun in the park; the camber gives it springy pop, and the flex pattern ensures stomped landings. Purple has always been my favorite color. My name means bright as the rainbow, and I've carried butterflies with me my whole life - seeing them at certain times has felt coincidental and meaningful. The transformation from caterpillar to butterfly pertains to many parts of our lives. Growth is a process; break out of your cocoon and be YOU“

- IRIS PHAM

OPTISYM

WOMEN'S | PARK - The Friendly Freestyle Snowboard

NITRO

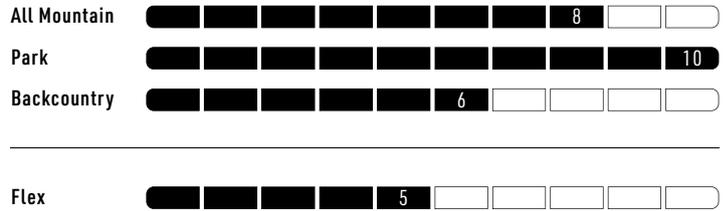

- ASYM TWIN SHAPE
- OUT-OF-THE-GATE BESTSELLER
- SINTERED BASE
- REDUCED RETAIL
- MARKETING FOCUS

DESCRIPTION

The Optisym is for all snowboarders who enjoy fun, low-impact, buttery, friendly freestyle snowboarding: Turning everything into a feature, even a groomed run or the knuckles of park landings, capable of switching from airtime tricks to flat ground tricks within seconds. The Optisym's asymmetrical twin shape and high-speed sintered base provide a turning experience that will keep you hyped from the first to the last chair, no matter the conditions!

"I love my Optisym!! I find it super playful and responsive, and I always have the best day riding, whether ripping turns or shredding the park. It comes highly recommended by me."
- CHRISTY PRIOR

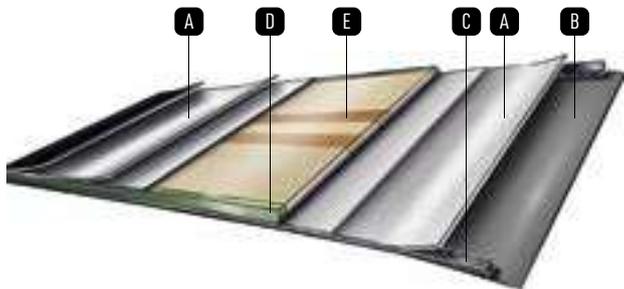

CHARACTERISTICS

- Shape: **Asym Twin** - Effortless turns and full Control

MERCY * ALI BRUCE *

WOMEN'S | PARK - Undeniable Freestyle Performance

- NEW LOWER PRICE POINT
- GRAPHICS COLLAB ALI BRUCE
- RIDDEN BY BRANTLEY MULLINS
- TEAM FAVORITE JIB BOARD

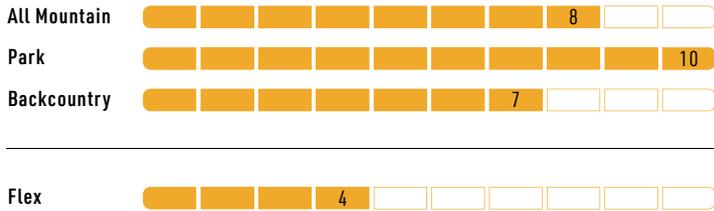

DESCRIPTION

For riders who can't be stopped from exploring the park! Developed with our top female pros, this snowboard is the perfect playful flexing freestyle board. It offers the support needed for comfortable progression in the air, on the rails, or in any terrain park. But it's about having fun too: This board is designed to make your park days better, one lap at a time!

„The Mercy is my all-time favorite jib board. It's playful, stable, and absolutely destroys in the park.“ - BRANTLEY MULLINS

„The art for this graphic is about empathy for the world, for nature, and for yourself. It's also about embracing what is real and tactile- like cold air on your face or pencils scratching on paper, and finding whatever gets you away from your phone or distractions to get your mind into a more peaceful and creative place. Snowboarding and art have both taught me how to be present, how to let go and let loose, and that you can thrive in something when you're not overthinking things. They've both helped build my confidence, and have shown me that life is not about being great at something, it's about how you learn to truly enjoy things- like you did when you were a kid.“ - ALI BRUCE

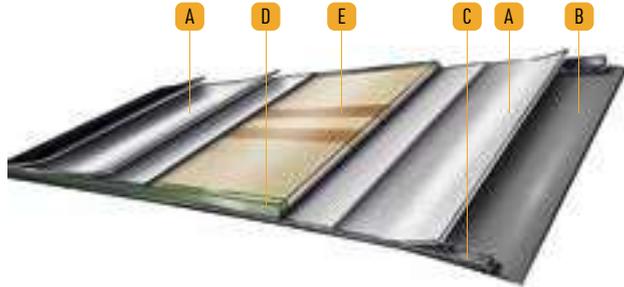

CHARACTERISTICS

- Shape: **Twin** - The park and urban classic
- Camber: **Cam-Out** - Fun, responsive and forgiving

WOMEN'S BOARDS

SPLITBOARDS

CAMBERS

BOARD TECH

CHARACTERISTICS

SHAPES

Tapered Swallowtail

The full width nose and narrower tail of our Tapered Swallowtail shapes make the board float evenly through the fluffiest of pow and cut through the occasional crust, while the deeply cut swallowtail reduces the rearward board surface even more for improved control and reduced rear leg burn.

Tapered Pintail

The full width nose and narrower tail of our Tapered Pintail shape make the board float evenly through the fluffiest of pow and cut through the occasional crust, while the pintail with winglets reduces the rearward board surface even more for improved control and reduced rear leg burn.

Tapered Directional

The wider nose and narrower tail of our Tapered Directional shapes make the board float evenly through the fluffiest of pow and cut through the occasional crust, while allowing easy maneuvering also in difficult terrain or snow conditions.

Directional

The mother of all snowboard shapes. Purposeful, focused, and functional, a directionally shaped board will float in the pow, cut through the crust and provide you with a functional tail to rip it up all over the mountain.

Asym Twin

As one of many Nitro inventions, the Asym Twin shape is based on the knowledge that your knees don't bend the same way in both directions and therefore, you cannot easily angle the board the same way in your toe- or heelside turns. A deeper heel sidecut radius compensates this, providing an even turning feel and more control when setting up for those relevant knuckle tricks.

Directional Twin

Offering the best of both worlds, the Directional Twin Shape combines the look and feel of a true twin with the versatility of a directional board. It will allow you to ride regular and switch with ease, while a slight stance setback will help making these powder turns relaxing and rewarding.

All-Terrain Twin

The All-Terrain Twin shape combines the classic twintip concept with an elongated tip and tail for the ultimate in all- mountain freestyle fun: A floaty, easy to maneuver board, allowing you to let your creativity be the boundary in expressing yourself all over the mountain.

Twin

Twintips are the standard when it comes park and urban riding. Their identical tip and tail shapes, combined with a fully centered stance and flex pattern allow you to set up your tricks standard or switch in exactly the same way.

CAMBER LINES

True Camber

True Camber is good old standard camber, which provides the stability and pop many shredders can't live without. The amount of snap and support you get from a cambered board is unrivalled by any other camber design. Camber height varies between board models and sizes because each board is specifically designed for a certain terrain or type of riding, but Camber is Camber there is no point in over complicating it!

Cam-Out Camber

Our Cam-Out Camber is basically a True Camber with early and smooth transitions into tip and tail. The result is a fun and responsive board that turns on the spot and is forgiving, even after that 713.5° landing!

Flat-Out Rocker

Our Flat-Out Rocker is a hybrid profile where the nose and tail lift off before the traditional contact points, providing effortless turns, and catch-free maneuvers. The lifted nose and tail provide excellent float, pressability, and forgiveness in any terrain. The profile of choice for park, freestyle, and urban riders worldwide.

Gullwing Rocker

A hybrid camber/rocker profile in a league of its own, Gullwing Rocker offers the best of both worlds for the all-mountain destroyer. The positive camber under each foot supplies riders with the response they know and love while the reverse camber profile in the center allows you to experience unparalleled float in the powder, as well as pressability in the park. This do-it-all design allows you to have a quiver of one and ride the whole mountain like a terrain park.

3D Surf Tech

Blending a convex nose into a concave tail section, our 3D Surf Tech bottom shape gives you that groovy nose floatation and defined heel control - just like a thruster fin setup - for the surfiest feel all over the mountain.

3D Twin Tech

As a twintip evolution of our 3D Surf Tech bottom, 3D Twin Tech is blending a convex nose into a concave center section, and back into a convex tail. This innovative bottom shape gives you a loose and surfy feel no matter if you're going forward or switch, combined with a controllable mid-section for the ultimate all-terrain freestyle experience.

CORE PROFILES

Standard Core Profile

Like a well-designed bow, the Standard Core Profile has a thicker part in the middle - from first insert to last - while thinning gradually towards the contact points, providing the ultimate in speed stability and edge control.

Reflex Core Profile

A thinner core between your feet on the Reflex Core Profile improves handling and increases torsional flex, allowing you to steer your board through a turn with ease.

Whiplash Core Profile

Our Whiplash Core Profile features reduced thickness between the inserts with added meat outside your feet for maximum ollie power, while maintaining a perfect press flex.

Splitgrip Core Profile

Like the Standard Core Profile, the Splitgrip Core Profile has a thicker part in the middle. For better uphill performance, the center thickness is modified and thins out towards tip and tail to improve your skins' grip even on slippery surfaces or steep climbs.

Softride

Many little boards on the market are way too stiff for our little shredders. The minimum insert depth required by international safety standards is forcing manufacturers to build thick, stiff kids boards that simply don't work well.

In our exclusive Softride construction, Spider web-like binding raisers allow us to make sweet soft-flexing boards for the youngest shredders while respecting all required standards for binding insert depth and pullout strength.

WIDTH

Standard

Standard Width boards offer the best in edge-to-edge quickness and response while still providing enough platform for average boot sizes.

Mid-Wide

Mid-Wide boards provide that little extra in width for less toe and heel drag, additional flotation and that extra bit of confidence when leaning into these power curves on icy slopes.

Wide

Not only for bigger boot sizes! Wide boards offer additional flotation, less drag and - due to our decades of designing nimble and reactive wide boards - will not feel like a bathroom door on your feet.

Progressive

The Progressive Width concept takes the guesswork out of choosing your board. We pre-adjusted each board's width to its size, providing you with the best length-to-width match, from Standard to Mid-Wide to Wide. Spend less time guessing and more time shredding!

SIDECUTS

Sidecuts are as crucial to a board's performance as flex and camber/rocker lines. A sidecut defines how a board turns, carves, and holds an edge. But the combination of all the above features makes a board work well for its designed purpose. Nitro has pioneered most of today's common sidecut geometries and has access to over 30 years of experience in fine-tuning each board model. This is why we felt it is important for us to simplify the tech jungle for you. You can get a first taste of what the shapes will feel like, but you can leave it up to our engineers to make each board just right for you!

Progressive Sidecut

A larger radius in the front, blended into a tighter one towards the tail: The Progressive Sidecut makes accelerating out of turns a breeze, while maintaining a catch-free nose area.

Radial Sidecut

The Radial Sidecut is straightforward and the most common in the industry: A single radius makes this sidecut extremely versatile, reliable, and predictable.

Dual Degressive Sidecut

The Dual Degressive Sidecut blends a smaller radius in the center with two larger ones in the tip and tail, making it loose and playful. Nitro's most forgiving sidecut.

Power Pods

Overlaying a tighter sidecut radius in the center of the board with a larger one towards tip and tail is creating our exclusive Powerpods: They make the board super reactive and fast turning once it's put on edge - while keeping it easy to control if ridden with less dynamics. As a bonus, you get extended board width under the bindings, resulting in additional edge control, especially on hard and icy surfaces as well as simply less toe and heel drag.

Hike Pods

Featured exclusively on our Doppelganger split boards, the Hike Pods are specifically designed to add grip under the bindings in hiking mode, making those icy traverses just a bit more fun!

BOARD TECH

CONSTRUCTION

BASE MATERIALS

Premium Extruded FH Base

Durability, speed and low maintenance all in one ultra-clear base material - our FH Base takes the abuse of any riding style - from the big mountain to the streets like no other.

Sintered Speed Formula HD Base

Our Sintered Speed Formula HD Base defines the industry standard when it comes to maximum abrasion resistance, increased wax absorption and higher on-snow speeds.

Sintered Ecospeed HD Base

Utilizing a recycled material compound, we have been able to achieve the same abrasion resistance, increased wax absorption and on-snow speeds with our Sintered EcoSpeed HD Base as on other comparable sintered bases.

Sintered Speed Formula II Base

Rocket science put to work! A nanotech wax formula deeply infused into our sintered base material makes the base surface lightning fast in all snow conditions. Highly tuned yet extremely durable, Speed Formula II Base technology is exclusively featured on Nitro high-end boards.

STEEL EDGES

Recycled Steel Edge

Made of 50% recycled steel, strong, durable and designed with enough meat to give your board a tune-up season after season.

Recycled Railkiller Edge

Your secret weapon for rails, rocks and longevity! With its unique edge profile and an impact resistance of more than 200% compared to a standard edge, the Railkiller Edge is twice as thick and twice as strong. This proprietary construction can take on any rail challenge and is made of 50% recycled steel to reduce the boards carbon footprint.

LAMINATES

Bi-Lite Laminates

Our rider-trusted Bi-Lite Laminates are engineered for unrivalled strength, powerful style and refined board-feel. The Bi-directional layup provides well-balanced response and even flex.

Tri-Lite Laminates

The perfect blend of flex and torsion control, Nitro tuned Tri-Lite Laminates with fibers running in 3 directions make for quick turning, highly responsive boards.

Full Carbon Laminates

Well-balanced layers of carbon fiber establish a new level in performance. Our Full Carbon Laminates provide the ultimate in pop and liveliness for a smooth, powerful, and effortless ride.

90° Carbon Laminates

Constructed with a layer of ultra-lightweight carbon fiber in the boards 90° direction, these laminates combine the flex and strength of a fiberglass layup with the power and response of carbon in the edge-to-edge direction.

Carbon Tape

The Carbon Tape reinforcement fibers are ultra-strong yet lightweight. Tip-to-tail stringers transfer the rider's input to help you drive your board and stay in control.

Antiphase™

Unlike conventional damping, which relies on rubber elastomers to reduce vibrations, Antiphase™ is a multidirectional composite layer bonded to a non-Newtonian material, which is placed between the tip and binding. It disrupts the natural frequency of an oscillating snowboard, stopping vibrations which otherwise amplify and end up as tip chatter.

Ride faster and stay in control!

Ballistic Impact Panels

Kevlar® is used in bulletproof vests and body armor to protect your core. We use it in strategic places around the binding-to-board interface to protect the construction from impacts during hard landings.

CORES

Powercore

Our Powercore uses tip-to-tail poplar wood, providing lightweight strength and the perfect blend of flex, response and feel.

Powercore II

The Powercore II is a tip-to-tail poplar wood core with additional beech wood stringers for unrivalled strength, smooth response, and insane pop.

Powerlite Core

The highest grade of selected ultra-lightweight poplar wood in our Powerlite core makes for the perfect ride with lots of pop and unmatched strength at a minimum weight.

Koroyd® Powerlite Core

With the Koroyd® Powerlite Core, Nitro pioneered the latest in core technology: Utilizing co-extruded miniature tubes, vertically aligned and welded, with unique energy absorption properties, Koroyd® is approximately 70% lighter than standard balsa wood, with no loss in strength or flex. This engineered core is utilized in the tip and tail areas for a smoother ride, reduced swing mass and overall weight.

SIDEWALLS

Ureshred Sidewalls

Just like Skate wheels and bushings, our Ureshred sidewalls are made from Polyurethane, which makes them highly resistant against impact and abrasion as well as giving them excellent dampening characteristics.

ABS Sidewalls

These sidewalls can take a beat in coldest conditions to protect the boards core and construction. Made of resilient ABS and with a 35% content of recycled polymers to reduce the CO2 footprint.

ECO INITIATIVES

Epoxy33

An alternative to petrol-based epoxy glues, enhancing mechanical performance while reducing carbon dioxide emissions with the use of renewable feedstock and recovery of organic waste.

Ecoguard Topsheet

Highly transparent and durable topsheet material that utilizes post-industrial, recycled material at a 90% rate.

SPLITBOARD SPECIFIC TECH

Tip and Tail Locks

Custom-designed Tip and Tail Locks are easy to use and will keep your board halves locked firmly together.

Forged T7075 Aluminum Hooks

Our Forged T7075 Aluminum Hooks make sure your board halves are stiffened out to make for a flat and even base surface.

Nitro x Kohla Skin Attachment System

Designed specifically for our perfectly matched Kohla skins, the Nitro x Kohla Skin Attachment system makes attaching and removing your skins a breeze and will keep your skins where they belong - no matter what the snow conditions.

Nitro x Kohla Vertical Skins

Vertical skins are tailored for high performance thru Kohla's new Fiber Seal and Smart Glue technologies. Fiber Seal prevents the skin from absorbing water to maintain light weight and good grip in changing conditions. Smart Glue is a solvent-free adhesive with better bonding in wet or cold conditions yet easier to release than traditional hot-melt skins. The Vertical skins are pre-cut to fit the specific splitboard model and come with metal speed hooks on both ends, matching the mounting holes in the board's tip and tail, to set up perfectly aligned in just seconds. Kohla skins are quality "made in Austria" and constructed of a 65% Mohair / 35% Nylon fiber mix.

Nitro x Kohla Peak Skins

The Peak skins are pre-cut to fit the specific splitboard model and come with metal speed hooks on both ends, matching the mounting holes in the board's tip and tail, to set up perfectly aligned in just seconds. Kohla skins are quality "made in Austria" and constructed of a 65% Mohair / 35% Nylon fiber mix and Hot-Melt glue technology.

SPLITBOARDING

Nitro has been dedicated to splitboarding for over three decades - sparked by our passion and the need to get the untouched powder up in the distance. Today, we offer complete splitboard set-ups for every type of rider or terrain, allowing the backcountry community to get all their gear from one source with trusted Nitro approval and technology. We want to make the splitboarding experience as effortless and rewarding as possible, and it all starts with creating a set-up fit for your needs and budget:

- Custom-fitted climbing skins made by KOHLA with a quick-fit mounting interface are available for all Nitro Splitboard models and sizes.
- Our Vertical Bindings, based on Spark's leading split binding platform, customized with our own parts for a typical Nitro feel
- The Vertical splitboarding boot, specifically designed for the needs of climbing and riding, continues to set the industry standard.
- Different styles of collapsible/telescoping poles as well as splitboard-specific backpacks complete our comprehensive backcountry offering.

Riders: Knut Eliassen, Nils Arvidsson & Matteo Massitti / Lofoten - Norway

DOPPLEGANGER

MEN'S SPLITBOARD - Built to Do It All

- NITRO'S MOST POPULAR SPLITBOARD
- LIGHTWEIGHT KORROYD CONSTRUCTION
- UNISEX
- COMPLETE ACCESSORY OFFERING

DESCRIPTION

Designed for the all-around backcountry explorer, the Doppleganger's shape and lightweight KORROYD® PowerLite core make it easier to set the skin track to the summit and go further on your next run, getting to those untouched pow fields every time - and with energy to spare for a more enjoyable ride down. The Doppleganger is our team's splitboarding go-to board of choice.

BINDINGS - TRUSTED

BUILDING THE PERFECT CONNECTION THAT LASTS

We design and build our bindings to offer the most trusted connection for any level of riding. A trusted connection is everything from the fit of the binding to provide support, the materials and construction used to offer you a secure fit, the air and dampening for added comfort, and the reliability of the system to make sure you can trust your bindings and focus on what's in front of you!

With over 36 years of experience designing snowboards, boots, and bindings under one roof, we have engineered a trusted interface to seamlessly transfer a rider's input to the board's edge. The shape of our highbacks is designed to match the contour of our boots perfectly. The new ratchets and buckles provide reliability, while the ankle straps and toe straps create support and outline the boot's flex. A bindings task delivers reliability, maximum control, comfortable ergonomic fit, and instant response, absorbing impacts and eliminating vibrations, such as heel chatter, for a smooth and trusted ride. Every model in our line is built around a rider and a riding style in mind, leading to different shapes and flex patterns of highbacks, baseplates, or straps. At the same time, all our products share the same imperative for high quality and ultimate durability.

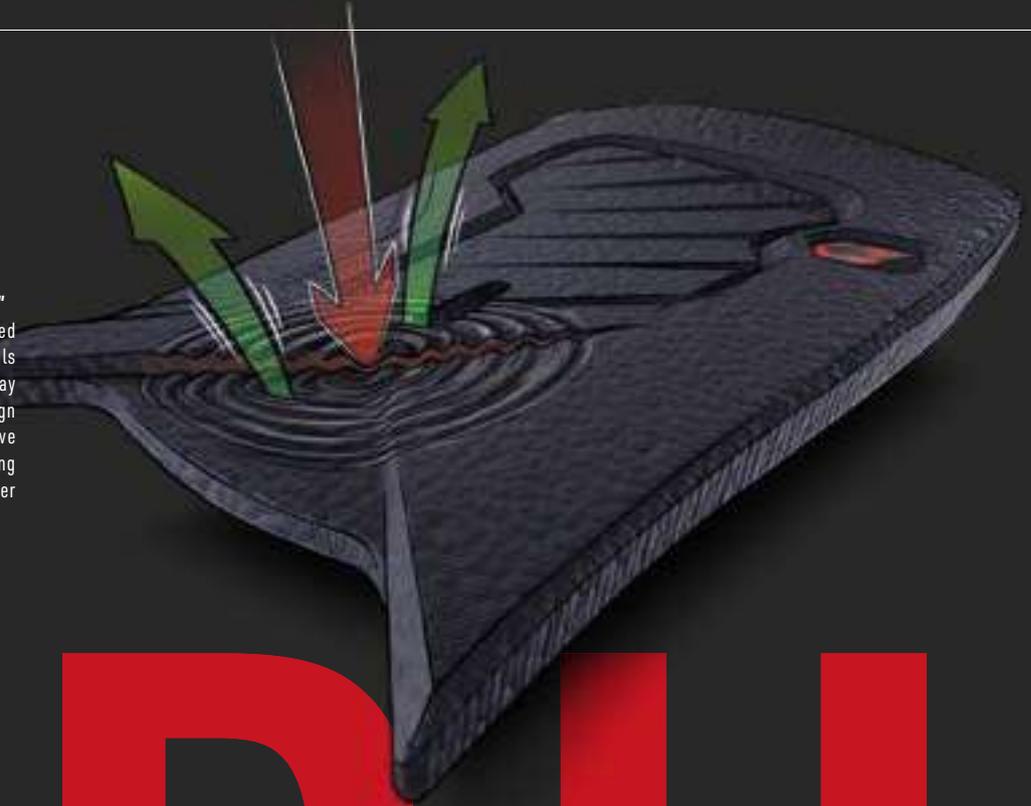

DAMPENING

HYPER Foam - "Responsive Dampening"
Introducing lightweight footbed construction using the same materials found in running shoes to offer all-day comfort for snowboarding. This design redirects the stored energy into a positive burst of power and control when entering and exiting turns, allowing for greater agility and responsiveness.

T R I L L I O

Speed Wheel 3.0 Buckles and Ratchets
The evolution of the Speed Wheel is characterized by a newly designed tooth geometry, guaranteeing incredibly smooth engagement and release. Crafted from a bomb-proof material, this wheel can endure cold temperatures without any loss of performance. It provides unwavering support, effortless usability, and the precision needed for everyday use on the mountain.

RELIABILITY

AIR

AIR DAMPENING

AIR Dampening

The lightest shock-absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not compromise response and control, allowing you to ride longer.

STEEL

3D OptiPro Ankle Strap

Introducing Nitro's new responsive all-mountain freestyle co-molded ankle strap on our Team Pro binding. Two high-grade polyurethane components are co-molded together to create the most responsive and comfortable 3D shaping fit. Its durable, form-fitting properties deliver a responsive, lightweight, minimalist, and supportive fit for riders who push their limits daily. Engineered to meet the pro-caliber standard, it provides all-day support for expert-level to professional riders.

DESCRIPTION

The Nitro One snowboard binding is expertly engineered for riders who appreciate a clean, minimalist aesthetic without compromising performance. Whether you're shredding in the park or cruising down the slopes, this binding offers a surf-inspired flex and provides a responsive and dynamic feel. It caters to riders of all levels with its freestyle-focused design, a snug fit, and exceptional durability.

"The One Binding says it all, as it's the only one you will need to ride all season, from the backcountry to the streets and everywhere in between! The design is clean, the fit is very comfortable, and the flex is forgiving yet responsive. It's my favorite in the line, and I can't see why it shouldn't be yours!" - SAM TAXWOOD

BINDING TECH

BASE

Tool-Less Customization

Our Charger Micro features a convenient tool-less high back adjustment that can be easily handled before mounting the binding onto the board, offering two different size settings by moving the highback forward or backward.

Smooth Flex Corner Lift-Off

The corner edges on the bottom of the binding baseplate are slightly raised, eliminating a sharp edge and pressure onto the board, allowing for natural flex in the interface.

Board Saver Technology

The corners on the binding's base plate are rounded to reduce a hard friction point where the binding and board meet. In addition, the rounded corners underneath the binding allow the board to flex more naturally around the binding base tray, allowing for a more natural ride and less stress to the board in these areas.

SPARK R&D Tesla T1 base

The Verticals Spark R&D Tesla T1 base features a simplistic, function-focused, and lightweight design. Combined with the upgraded EVA pad, it delivers a comfortable and stable ride on the way down, support on the way up, and a smooth transition between skinning and riding modes.

DAMPENING

AIR Dampening

The lightest shock-absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised. This noticeable difference in ride and comfort does not compromise response and control, allowing you to ride longer.

HYPER Foam - "Responsive Dampening"

Introducing lightweight footbed construction using the same materials found in running shoes to offer all-day comfort for snowboarding. This design redirects the stored energy into a positive burst of power and control when entering and exiting turns, allowing for greater agility and responsiveness.

EVA Dampening

EVA (foam) dampening is the most popular technique used worldwide. You can find it in sneakers, beds, and even yoga mats, where it always brings a sense of comfort to the user. It offers a lightweight feel and excellent cushioning, all without compromising quality control.

4mm Heel Rise

Raising the heel height on the binding base plate will significantly improve the impact on the boards' heel side, allowing for more precision when turning from toeside to heelside. You can be confident that your ride down will be safe and fast.

3° Canted footbed

The canting puts your knees and body in the most natural and ergonomic position on the board. So, stay out longer and ride longer!

DISC

Universal Mini Disc (2 x 4)

Evolution at its peak! With a smaller footprint and less impact on the board's natural flex, Nitro's mini discs set the standard in disc functionality. In addition, the snap feature lets you choose and lock in your binding angle before you mount your bindings - put it once and never lose it again!

Re: Flex Mounting System

The Re: Flex Mounting system increases the snowboard's natural board flex under the binding and reduces the binding's overall weight. This system is compatible with all board mounting options.

BUCKLES, RATCHETS, AND CONNECTORS

Aluminum Speedwheel buckles

The strongest and lightest aluminum lever on the market combines with the smoothness of a polymer speed wheel. These buckles work like a dream and last forever—no stripping, no slipping!

Speed Wheel 3.0 Buckles and Ratchets

The evolution of the Speed Wheel is characterized by a newly designed tooth geometry, guaranteeing incredibly smooth engagement and release. Crafted from a bomb-proof material, this wheel can endure cold temperatures without any loss of performance. It provides unwavering support, effortless usability, and the precision needed for everyday use on the mountain.

Easy Entry Buckles and Ratchets

When you step into the binding, these S-curved ratchet straps stay out of your way. The wide-mouth buckle funnel helps you guide the straps into the ratchet for an ultra-fast, precise bite of your buckles.

Cable Reinforced Connectors and Ratchets

Over-molded stainless-steel cables inside the ratchets and connector straps - no more stretch or breaks.

STRAPS

Premium Locked Down Ankle Strap

The Premium Locked Down ankle strap is designed for maximum response and control. It is constructed with 45° density thermo-foam for comfort, a fiber-reinforced 3D spine for performance and precision, and is ergonomically shaped to provide a perfect fit. It is featured exclusively on the Phantom + (PLUS) and Poison.

3D OptiPro Ankle Strap

Introducing Nitro's new responsive all-mountain freestyle co-molded ankle strap on our Team Pro binding.

Two high-grade polyurethane components are co-molded together to create the most responsive and comfortable 3D shaping fit. Its durable, form-fitting properties deliver a responsive, lightweight, minimalist, and supportive fit for riders who push their limits daily. Engineered to meet the pro-caliber standard, it provides all-day support for expert-level to professional riders.

3D OptiFrame Comfort Ankle Strap

Our medium-flexing, lightweight 3D ankle strap uses injection molding to deliver even pressure across the ankle. It's designed with a medium response to provide you with a comfortable ride all day long. This ankle strap is featured on the Cosmic binding and is made from high-grade polyurethane. Its durable and form-fitting properties create a light, minimal, and sure-fitting 3D shape that prioritizes comfort and support.

3D OptiFrame Locked Down Ankle Strap

Nitro's all-mountain freestyle responsive 3D injection molded ankle strap is featured on the Team binding. It is crafted with high-grade polyurethane components that are both durable and form-fitting, providing lightweight, even pressure and a 3D shape that offers instant response and support. It is engineered to reduce overall weight while focusing on hyper-precision and response for progressive all-mountain riding.

3D OptiFrame Flex Ankle Strap

Nitro's all-mountain 3D Injection Molded ankle strap is featured on the Phantom and Fate. It is crafted from high-grade polyurethane components, offering durable and form-fitting properties to provide a responsive, lightweight, minimalist, and well-fitting 3D shape and support. Engineered to reduce the overall weight and provide a responsive and comfortable boot hold for high speeds and long days.

3D OptiFrame Light Strap

Nitro's super lightweight 3D injection-molded ankle strap is designed to provide even pressure and stable support around your ankle for all-mountain riding. The fully wrap-molded single-component piece is made of high-grade polyurethane, a construction process and material that is durable and built to last. The design is constructed to provide a medium flex and reduce overall weight for a comfortable feel throughout the day.

3D OptiFrame Ankle Strap

Nitro's medium flexing lightweight 3D injection molded ankle strap is featured on the ONE and Rambler. Created with high-grade polyurethane components with durable and form-fitting properties to provide a light, minimalistic, sure-fitting 3D shape and support. Engineered to reduce the overall weight and focus on a natural and precision boot hold, providing a perfect fit for comfortable progression

3D OptiFrame Kids Strap

The kid's single strap provides a perfect blend of comfort and support at a minimal weight, allowing young rippers and parents to quickly and securely strap into the bindings, regardless of the conditions. The 3D injection-molded ankle strap is designed to provide even pressure and stable support around your ankle through its three-point connection design. The fully wrap-molded single-component piece is made of high-grade polyurethane, a construction process and material that is durable and built to last. The strap can be fully adjusted to your boot size through the two tool-less adjustable levers on the inside ladders and the single ratchet on the outside. It offers the next level of response and freedom in a single strap built for young Rippers!

Übergrip PRO Toe Strap - Best fit and grip around the toe box

The Übergrip Pro toe strap is characterized by its lightweight, 3D-injected molded construction, which incorporates a grip pad on the interior to guarantee an optimal level of secure fitting, grip, and support. Consequently, this strap is designed to conform to the shape of any boot's toe box while the rubber component maintains its position, regardless of the intensity of landings or weather conditions.

Übergrip Toe Strap

A 3D injection molded contoured strap that seamlessly matches your boot toe box - a universal solution that allows you to strap it over the top or ride it cap style over the toe. A minimalistic design to provide maximum comfortable support and foothold.

"The Nitro Step On® system is, in my opinion, the superior easy-entry solution that speeds up the connection time and allows me to be more present when riding with my kids, filming, or just cruising some laps with the homies! The responsive highback elevates the control and feel for the ride, going edge to edge. If you are looking for something other than a two-strapped binding, then do yourself a favor and get a Nitro Step On® binding!"

- KNUT ELIASSEN

STEP ON

STEP ON[®] BINDINGS

STEP ON[®] SYSTEM

The Step On[®] System allows you to step on and ride. It is a convenient binding-to-boot solution for those seeking the ultimate balance of convenience and performance. You can ride the entire mountain without having to sit down to put on your bindings, beat the pack and get those first tracks, and also get the support you need to charge. This system is designed to make putting your bindings on and taking them off easier and faster—it's simple.

STEP ON[®] BOOTS

TLS LACING

Nitro is leading the pack with the TLS lacing system: Two independent lacing zones, quickly tightened and safely locked in place by a compact and lightweight mechanism with the reliability proven by tens of thousands of days on the mountain. Specifically designed, low abrasion Dyneema[®] laces, easy-entry handle storage pockets as well as our Bail Out system for effortless lace release round off the most developed dual lacing system on the market. And our strategically placed molded Lace Gliders reduce friction to a minimum for more defined and powerful lacing.

BOA[®] FIT SYSTEM

BOA[®] Fit System featuring H4 dial is built to withstand impact in the park, backcountry, and everything in between. The BOA[®] Fit System delivers micro-adjustable precision fit, engineered to perform in the toughest conditions. BOA[®] Dials and Laces are guaranteed for the lifetime of the product on which it is integrated.

ANKLE STRAP WITH BOA[®] FIT SYSTEM

Our ankle strap with BOA[®] Fit System is precisely designed to fit the boot shape and provide the support experience and feel of our binding ankle straps. It is used on all our Step On[®] boots to offer additional heel hold and ankle support. The BOA[®] Fit System delivers micro-adjustable precision fit, engineered to perform in the toughest conditions. BOA[®] Dials and Laces are guaranteed for the lifetime of the product on which it is integrated.

MICRO ADJUSTABLE HEEL LOCK PRO

Firmly integrated into the boot shell, this harness secures the ankle area of the liner and provides superior fit. Operated from the outside by a BOA[®] H5 dial, the system can be tightened and opened loosened on the fly. On Step On boot models, you will experience the same ankle lock as with conventional binding straps.

NITRO STEP ON[®] OUTSOLE

Our 100% Step On[®] compatible rubber outsole will interface perfectly with any Step On[®] binding on the market for an effortless boot-to-binding engagement. At the same time, it provides a highly effective traction pattern with an abrasion-resistant high-grip rubber compound for durability and a perfect grip. Made from up to 30% of recycled rubber (depending on sole color).

BOOTS - HOLY FIT

NITRO

THE "HOLY FIT"

Boots are the most 'personal' piece of snowboarding equipment. They connect body to board, rider to machine. And they are a hybrid of soft- and hardgoods, often primarily judged by optical appearance.

We love snowboard boots and spend endless hours discussing, prototyping, and testing everything from small incremental improvements to radical innovations. Always with a focus to make your (and our!) days in the snow as fun and comfortable as possible.

HOLY FIT TECH

BUILT FROM THE INSIDE OUT

Our philosophy is to build the boots from the inside out to focus on comfort, support, and performance to create the "Holy Fit" for snowboarders to ride longer. So, check them out at your local shop and try on a pair or two - you won't regret it.

ILS (INTERNAL LACING SYSTEM)

Our Internal Lacing System features a reinforced harness firmly connected to the boot shell. It snugly wraps around the liner, securing it in the shell and providing precise lacing and fit. Our engineered ILS laces provide less friction and a Dyneema® core for added strength.

PATENTED RE/LACE LINER LOCKER

The patented Re/Lace Liner Locker provides a secure closure, allowing for easy tightening of your liner by simply pulling up on the lace handle - even when your boot shell is already tied. This allows you to (re)tighten your liner and foothold throughout the day (wherever you may find yourself on the mountain) without having to untie your boots shell lacing system.

INTERNAL POWER STRAP

Crank down the top of your liner with the easy-to-use Power Strap for more response from the top down.

NITRO CLOUD LINER

BUILT FROM THE INSIDE OUT

INTERNAL ANKLE SUPPORT

An anatomically shaped and pliable support plate distributes lace pressure over the instep area and provides extra support against toeside turn impact. The result is more comfort and a better, more precise fit.

HEAT MOLDABLE

Our Thermacell material will adapt to your foot's shape over time, simply by wearing your boots out riding. If you still feel the need to custom-fit your boots, this can easily be done by heat molding your liners either in shop, using a specific heating system and tools, or even at home.

FLEX TOE

A Nitro industry first over two decades ago, often copied but never equaled, and now optimized for even more freedom: A flexible material is used to build the toe area of our liners, allowing for size variations and a equal fit left and right. And since your toes can move more feely not being crammed into a stiff toe box, they will stay warmer all day long.

INTERLOCK SYSTEM

The Interlock System connects the liner heel to the shell with a binding - style ladder design to help generate the world's best foothold. Say goodbye to heel slipping and hello to all-day comfort and foothold.

TLS+ LACING

Nitro's latest zonal speed lacing system features a redesigned locking cleat without moving parts. Combined with a specifically developed high-tech Dyneema® lace and new lace loops, it offers the ultimate pro-level fit, lockdown, and foothold. The simplistic power of just pulling up two handles controls the top and bottom section of the boot for custom and zonal adjustment. On selected models, our strategically placed molded Lace Gliders reduce friction to a minimum for more defined and powerful lacing.

NITRO BOOT OUTER SHELL

MOLDED TOE CAP

Precision-molded to fit our last perfectly, our molded toe cap provides more toe space and protection from toe straps worn over the tip.

AIR DAMPENING

The best shock absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised and, unlike other technologies, functions virtually independent from temperature. This noticeable difference in ride and comfort does not compromise response or control. More overall comfort by absorbing impact from deep landings or choppy snow conditions - allowing you to go faster and deeper all day!

THERMINATOR SHIELD

The Therminator Shield is a reflective thermal layer between sole and liner that will reflect your body heat and keep your feet warm all day.

"My all-time favorite boot from Nitro is the Team TLS. Not only because it looks so damn good, but it also has the perfect fit and flex for my liking. Having a boot that feels so comfortable from the very first riding day on to the last day of the season is amazing. Also, the durability of these boots is top-notch! Most of my homies are changing their boots mid-season, but I would be rocking mine for two seasons straight, and my boots would remain as good as new. The extremely fast and reliable TLS lacing system is just the icing on the cake."

BOOT TECH

BOOT CLOSURE

TLS+

Nitro's latest zonal speed lacing system features a redesigned locking cleat without moving parts. Combined with a specifically developed high-tech Dyneema® lace and new lace loops, it offers the ultimate pro-level fit, lockdown, and foothold. The simplistic power of just pulling up two handles controls the top and bottom section of the boot for custom and zonal adjustment. On selected models, our strategically placed molded Lace Gliders reduce friction to a minimum for more defined and powerful lacing.

TLS

Nitro is leading the pack with the TLS lacing system: Two independent lacing zones, quickly tightened and safely locked in place by a compact and lightweight mechanism with the reliability proven by tens of thousands of days on the mountain. Specifically designed, low abrasion Dyneema® laces, easy-entry handle storage pockets as well as our Bail Out system for effortless lace release round off the most developed dual lacing system on the market. And our strategically placed molded Lace Gliders reduce friction to a minimum for more defined and powerful lacing.

Dual High Power BOA® H5 Fit System

The BOA® Fit System featuring Dual H5 Dials introduces multi-directional functionality for precise tightening and loosening. The mirrored user interface offers a more intuitive user experience and ergonomic operation. The BOA® Fit System featuring H5 dial is built to withstand impact in the park, backcountry, and everything in between. The Coiler™ on the tongue dial increases the speed of entry into the product by quickly taking up lace slack. BOA® dials and laces are guaranteed for the lifetime of the product on which it is integrated.

Dual High Power BOA® Fit System

High power and high capacity, the BOA® Fit System featuring Dual Dial H4 delivers micro-adjustable precision fit with a 4:1 mechanical advantage. BOA® Fit System featuring H4 dial is built to withstand impact in the park, backcountry, and everything in between. The Coiler™ on the tongue dial increases the speed of entry into the product by quickly taking up lace slack. BOA® dials and laces are guaranteed for the lifetime of the product on which it is integrated.

Dual BOA® Fit System

The BOA® Fit System combines the versatility and efficiency of the M+2 platform with the high capacity and high power of the H4 COILER™. The Coiler™ on the tongue dial increases the speed of entry into the product by quickly taking up lace slack. BOA® Dials and Laces are guaranteed for the lifetime of the product on which it is integrated.

BOA® Fit System

BOA® Fit System featuring H4 dial is built to withstand impact in the park, backcountry, and everything in between. The BOA® Fit System delivers micro-adjustable precision fit, engineered to perform in the toughest conditions. BOA® Dials and Laces are guaranteed for the lifetime of the product on which it is integrated.

Standard Lacing

Equipped with soft and grippy laces for a tried-and-true way of lacing up your boots to get that personalized and familiar fit.

Velcro Power Strap Closure

Closing the boot is a fly using a simple Velcro power strap system - and getting out is as easy!

Ankle Strap with BOA® Fit System

Our ankle strap with BOA® Fit System is precisely designed to fit the boot shape and provide the support experience and feel of our binding ankle straps. It is used on all our Step On® boots to offer additional heel hold and ankle support. The BOA® Fit System delivers micro-adjustable precision fit, engineered to perform in the toughest conditions. BOA® Dials and Laces are guaranteed for the lifetime of the product on which it is integrated.

SOLE COMPONENTS

EVA Midsole

A molded EVA midsole reduces overall boot weight and provides dampening, comfort, and thermal insulation.

Air Dampening

The best shock absorbing technology on the planet sucks up hard landings and keeps your heels from getting bruised and, unlike other technologies, functions virtually independent from temperature. This noticeable difference in ride and comfort does not compromise response or control. More overall comfort by absorbing impact from deep landings or choppy snow conditions - allowing you to go faster and deeper all day!

D30® Technology

D30® is a smart material that moves slowly and increases comfort when in a normal state. But when shock or impact is increased, it absorbs and disperses energy, before instantly returning to its flexible state. Intelligent comfort!

Gel Dampening

A molded gel pocket in the sole boot offers high shock absorbing standards and provides more dampening in the heel area. The best solution when space is limited.

Therminator Shield

The Therminator Shield is a reflective thermal layer between sole and liner that will reflect your body heat and keep your feet warm all day.

BOOT TECH

OUTSOLES

Vibram® Outsole made of Icetrek Compound

Vibram Icetrek is the compound dedicated to winter conditions, engineered for low to medium temperatures, which features superior grip on ice, snow and cold terrain.

Vibram® Outsole made of Ecostep Compound

Vibram has always researched new solutions that respect the environment. With this in mind, Vibram developed the Ecostep compound, which has a minimum of 30% recycled rubber while offering the high-quality product Vibram is known for.

Vibram® Outsole with Litebase Technology

Vibram Litebase drastically reduces the weight of a rubber sole while maintaining performance. The thickness of the rubber base is reduced to 50% from regular outdoor performance outsoles. Consequently, the weight of the tread is reduced by up to 30%. The result is a professional grade lightweight Vibram sole, with patterns identical to those of a traditional Vibram sole and it has the features of traction and durability.

Vibram® XS Trek Evo Compound

Vibram XS Trek Evo is the latest evolution of Vibram XS Trek in terms of balancing multi-surface grip and durability, featuring also non-marking properties and excellent adaptability to a wide range of terrains.

Vibram® Arctic Grip All Terrain Technology

Vibram Arctic Grip All Terrain is an all-new technology that improves grip and traction on varied surfaces, while increasing durability. It uses a unique polymer blend and advanced filler system that revolutionizes grip on wet ice surfaces. This evolution of Arctic Grip matches with Vibram XS Trek Evo compound, providing added durability and improved grip on wet and dry surfaces.

Vibram® Traction Lug Technology

Vibram Traction Lug is an innovative design concept that focuses on the key element in traction – the shape of the lug. Thanks to athletes' know-how and the constant drive by Vibram to enhance grip and traction, Traction Lug revolutionizes your activity outside, increasing traction, adding stability and improving surface area: this means propulsion and braking power without comparison.

Nitro Step On® Outsole

Our 100% Step On® compatible rubber outsole will interface perfectly with any Step On® binding on the market for an effortless boot-to-binding engagement. At the same time, it provides a highly effective traction pattern with an abrasion-resistant high-grip rubber compound for durability and a perfect grip. Made from up to 30% of recycled rubber (depending on sole color).

Low Profile Real Rubber Outsole

This lightweight and low-lot outsole has been developed to combine a highly effective traction pattern with a flexible overall shape. Its design will allow you to tweak and roll your foot like on a surfboard while providing the traction to hike the steep stuff. Made from up to 30% of recycled rubber (depending on sole color).

Real Rubber Outsole

A highly effective traction pattern, combined with an abrasion-resistant high-grip real rubber compound provides sole durability and a perfect grip, no matter if you're hiking up the park or down the stairs to the bathroom. We are using up to 30% of recycled (car) tires and give new life to already existing rubber material. Only dark colors are possible with this kind of rubber, given its base color.

EVA Outsole

To reduce weight, we are using an EVA outsole, which also provides great grip, impact absorption and thermal insulation.

Rubber Impact Panels

Strategically placed rubber reinforcements for added resistance, traction, and durability. Selected colorways are using up to 30% of recycled rubber.

LINER LACING

ILS (Internal Lacing System)

Our Internal Lacing System features a reinforced harness firmly connected to the boot shell. It snugly wraps around the liner, securing it in the shell and providing precise lacing and fit. Our engineered ILS laces provide less friction and a Dyneema® core for added strength.

Micro Adjustable Heel Lock Pro

Firmly integrated into the boot shell, this harness secures the ankle area of the liner and provides superior fit. Operated from the outside by a BOA® H5 dial, the system can be tightened and opened loosened on the fly. On Step On boot models, you will experience the same ankle lock as with conventional binding straps.

Micro Adjustable Heel Lock

This integrated locking harness secures the ankle area of the liner and provides superior fit. Operated from the outside by a BOA® dial, the system can be tightened and opened loosened on the fly. On our vertical boot, the Heel Lock allows you to fine tune hiking/riding modes to your liking.

Internal Ankle Support

An anatomically shaped and pliable support plate distributes lace pressure over the instep area and provides extra support against toeside turn impact. The result is more comfort and a better, more precise fit.

DLS (Direct Lacing System)

Directly connected to the liner, the Direct Lacing System features high-tech Dyneema® loaded low-friction laces for ultimate fit and comfort. by simply pulling up on the lace handle.

DLS Shell Lacing

For lacing up the Daily, we rely on our patented Re/Lace locker system. It provides a secure closure, while allowing for easy re-tightening of your boot during the day by simply pulling up on the lace handle.

Patented Re/Lace Liner Locker

The patented Re/Lace Liner Locker provides a secure closure, allowing for easy tightening of your liner by simply pulling up on the lace handle – even when your boot shell is already tied. This allows you to (re)tighten your liner and foothold throughout the day (wherever you may find yourself on the mountain) without having to untie your boots shell lacing system.

CONSTRUCTION

Hike ,N' Ride Construction

Our Hike ,N' Ride Construction is specifically designed for easy switching between the softer hike and stiffer ride modes. Combined with an Automatic Power Strap and integrated forward lean adjustment, the upper boot cuff can be easily fine-tuned to your liking.

Dual Density Power Tongue Stiffener

If you are looking for maximum adjustability throughout the day or season, you can use our removable tongue stiffener to change from premium precision to more of a relaxed feel. It comes in two different densities, allowing three response settings. From the steep and deep to the groomers, you can customize your boot feel perfect for your style.

Power Tongue Stiffener

If you are looking for adjustable stiffness throughout the day or season, you can use our removable tongue stiffener to change between premium precision or more of a relaxed feel. From the steep and deep to the groomers, you can customize your boot feel perfect for your style.

Molded Toe Cap

Precision-molded to fit our last perfectly, our molded toe cap provides more toe space and protection from toe straps worn over the tip.

Internal Power Strap

Crank down the top of your liner with the easy-to-use Power Strap for more response from the top down.

Shell Power Strap

Crank down the top of your boot with the easy-to-use Power Strap for more response from the top down.

Speed Gaiter

Nitro 's new gusset construction enhances protection from the elements on top of the foot to keep you dry and warm. The ergonomic diagonal zipper design allows for one-handed operation while also adding to the durability of the boot and its lacing system.

Armored Shell

To give our boots more support and response, we have designed an internal molded shell. This anatomically shaped and 3D molded piece wraps around the heel and the lateral /medial side of the foot, increasing heel fit, shell stiffness and durability. The Armored Shell helps the boot keeping its shape and flex day-in, day-out, season after season.

Armored Spine

We are using an anatomically shaped and 3D molded heel reinforcement to provide even boot flex and long-lasting heel fit.

Molded Crampon Heel Cup

This molded piece of heel reinforcement is perfectly shaped for a secure fit of semi-rigid crampons.

Reinforced Heel Construction

This model-specific reinforcement provides extra resistance against wear and tear from the binding heel area.

Endure® Gravity Foam Toe

The toe is protected by Endure® Gravity Foam to withstand the toughest and most demanding outdoor conditions. Highly durable and up to 50% lighter than rubber, Endure® is the best sustainable alternative to rubber. It is derived from recycled pre-consumer sources and is 100% recyclable at the end of life.

Endure®

Interlock System

The Interlock System connects the liner heel to the shell with a binding – style ladder design to help generate the world's best foothold. Say goodbye to heel slipping and hello to all-day comfort and foothold.

For this season, we teamed up with our good friends at JBMC Gloves. They have been making durable and fun gloves for over a decade. We thought it was the perfect time to kick off a small, unique line together. These gloves provide the spirit, protection, warmth, and grip to ride all day and, most importantly, grab your board and tweak your grabs with confidence and look really good while doing it!

SPLITPACK 30

BACKPACK

Volume 22-30 L / size 53 x 32 x 21 cm / weight ca. 920g

Specifically designed for backcountry touring, minimalist yet multifunctional and variable in size. The roll-top closure grants immediate access to your avalanche gear while allowing the bags volume to be expanded from 22-30L. Get quick access to all your gear thru a large double-zip backpanel opening, keeping your items well organized from top to bottom.

ADDITIONAL FEATURES ARE:

- made of HD 420 polyamid fabric (PFC-free)
- 3D molded backpanel construction with integrated back protection shield
- build with durable YKK™ quality zippers
- roll-top and backpanel rear access to main compartment
- avalanche safety gear sleeve
- optional KOROYD EOP 1.0 back protector
- goggle zip pocket
- additional gear pockets
- hydration compatible
- external water bottle zip-pocket
- build in mesh helmet carry
- hiking pole attachment system
- ice-axe loops
- board- and ski carry system
- multiple gear loops
- adjustable waist and chest straps
- compression straps and load lifters
