Graphic: Introducing the Blank series from Slash. Boards made with a clean and timeless design.

Strikingly subtle, yet bright and bold. The black lines on the edges signify the board's effective edge and Gigi's added loads of techy info for shop staff on the top sheet: stiffness rating, camber profile, camber type and symbols to signify contact points, axis point and set back inserts.

# UP SIDE DOWN

a playfull parkboard for all occasions

In Gigi's mission to make snowboarding more accessible to the masses we've got some huge news.

Now manufactured using only BLAX fibreglass to make it torsionally softer, the Happy Place is a gender neutral board. This hybrid camber profile with camber between the feet and lifted tips - makes it easy to turn and come correct in the park.

The visible carbon-bon X added on nose and tail give you that amazing pop and responsiveness. It's a favourite from total beginners to intermediate. It's everyone's Happy Place.

# CLEAR VISION

## The Original Slash Craft

The Slash ATV is a directional twin with positive camber, built for stout ollies and pure carves. Its dynamic flex and lengthened contact points let the board cruise calmly on flat slopes, holding speed without constant edge engagement.

Once on edge, the sidecut activates, giving this mid-wide board the agility of a narrow snowboard with precise heel-to-toe response. Pop, rebound, and steady edge engagement help you find flow and exhilaration on any run.

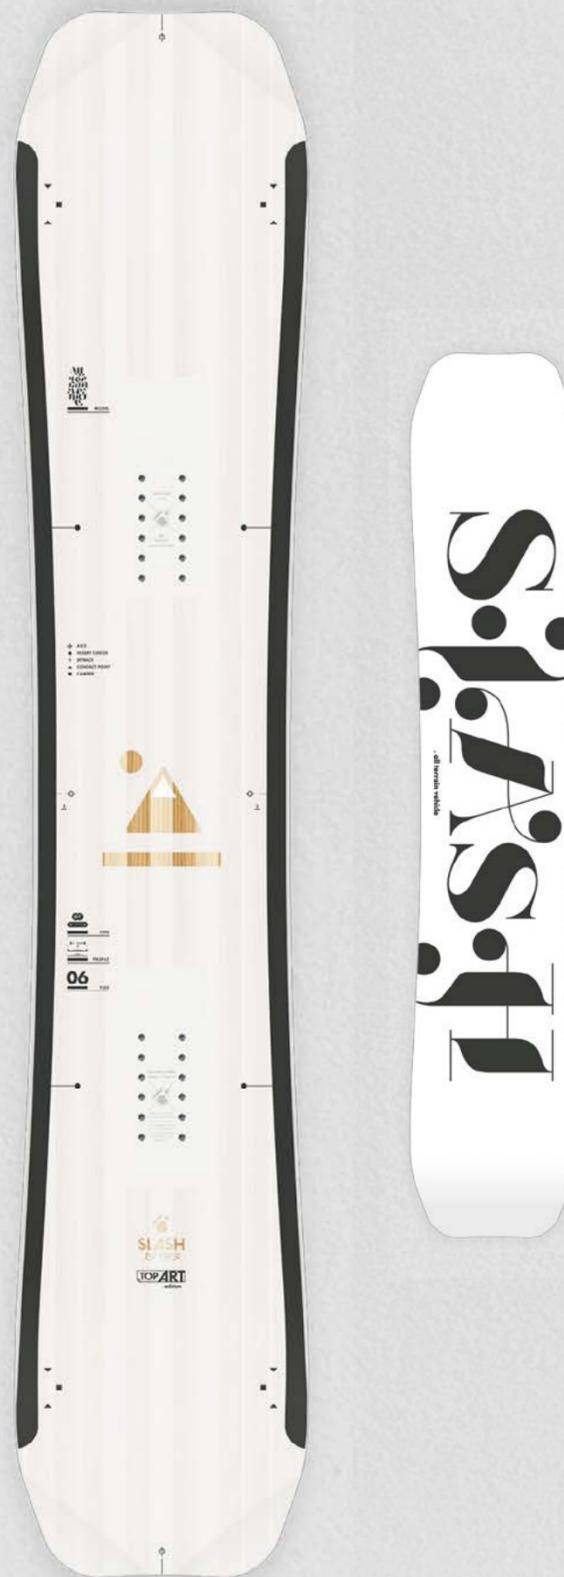

Constructed with carbon reinforcements under a Forever Woodcore and triax fiberglass, the **ATV** is the original Slash craft - a perfect balance of technical mastery, performance, and freedom on the mountain.

## TopART Stickers - Apply Yourself

With TopART Stickers, you can pick your graphic and bring your board to life. The TopART Stickers feature designs from our talented friends - because snowboarding is more than skill; it's expression, art, and community.

At Slash and anywhere there is a creative spark, we celebrate imagination.

If your board still rides like a champ, why not upcycle it with fresh art? The stickers are made from quality foil - durable, dimension-stable, and easy to apply for a smooth, bubble-free finish that turns heads.

TopART is a simple DIY upgrade that lets your board express personality, stand out, and be truly unique.

# ATV REIMAGINED

This special edition ATV comes straight from Gigi Rief himself - all terrain, all senses. When Michal Smolarek created a sticker graphic for Slash, Gigi reimagined an old favorite from his early snowboarding days - collecting inspiration like nectar, letting it blossom over years of riding, and shaping it into his personal style repertoire.

---

Part beekeeper, part snowboarding visionary, Gigi's journey spans decades, flights of imagination, and countless mountains, all in search of a heart of gold. The Reimagined ATV carries the wisdom of its lineage while charging forward with unstoppable energy.

→ Life is what you make it -  
ride it with freedom, purpose,  
and style, blessed by a true icon.

# PLACE - UTCHER

## HAPPY PLACE KIM THE BUTCHER

FREESTYLE

Kim the Butcher, originally from a small village in Luxembourg, grew up surrounded by the family butcher shop, skateboarding, and snowboarding - Drawing became a constant, and dark, skull-filled motifs naturally found their way into his creative universe.

Today, Kim works as a graphic designer while channeling his passion for illustration and snowboarding culture into projects that blur the line between art and lifestyle.

Snowboarding has been central to his life since 1991, when he first strapped in at Zauchensee,

Austria. What draws him is the thrill of fear, the camaraderie with friends, and the subculture that surrounds boards, stickers, and artwork.

For Kim, snowboards are canvases - a space where DIY culture and personal taste converge, inspiring his work as an illustrator. His Happy Place graphic for Slash reflects a darker, spiritual side - skulls, thistles, and cycles of life and death symbolize resilience, resistance, and self-made happiness.

---

It's a reminder that a happy place is personal: it's one you cultivate yourself.

CHECK THE FEED

## HAPPY PLACE CHECK THE FEED

- ➔ Slash joins forces with CHECKtheFeed to create a board with purpose - a place for new talent to rise. A collaboration between Gigi Riif and CHECKtheFeed founder Johnny Hanchek rooted in independence, creativity, and the belief that snowboarding's future belongs to those who ride their own line.
- A smooth park board with lifted tips for easy turn initiation at low speeds. Carbon-bon X strings deliver lively pop and response.
- ↓  
A favourite from beginners to intermediates.

The topsheet stays raw and honest:

the VX-inspired artwork was adapted by Joshua Lebrun himself, giving the board the gritty, hands-on character that defines CHECK-theFeed's filmmaking and outerwear aesthetic.

**STORM**

PABLO

ZOOGAR

## BRAINSTORM PABLO AZOCAR

### Brainstorm the Elements

The Brainstorm is Slash's versatile directional-twin built for everything from pow laps to park laps - stable enough to charge through crud and choppy snow, yet playful enough for freestyle and side-hits. Its blend of camber underfoot, subtle rocker in the nose, and triaxial fiberglass over a lightweight „Forever“ wood core delivers excellent float, smooth turn transitions, and consistent torsional flex.

With the new collaboration graphic by Chilean artist Pablo Azocar, this board becomes more than a machine - it becomes a field of energy. Azocar's pen-and-paper optical phenomenon mirrors the Brainstorm's dual nature: equally at home carving polished pistes as it is charging through wild powder fields.

## STRAIGHT DAVID LEITNER

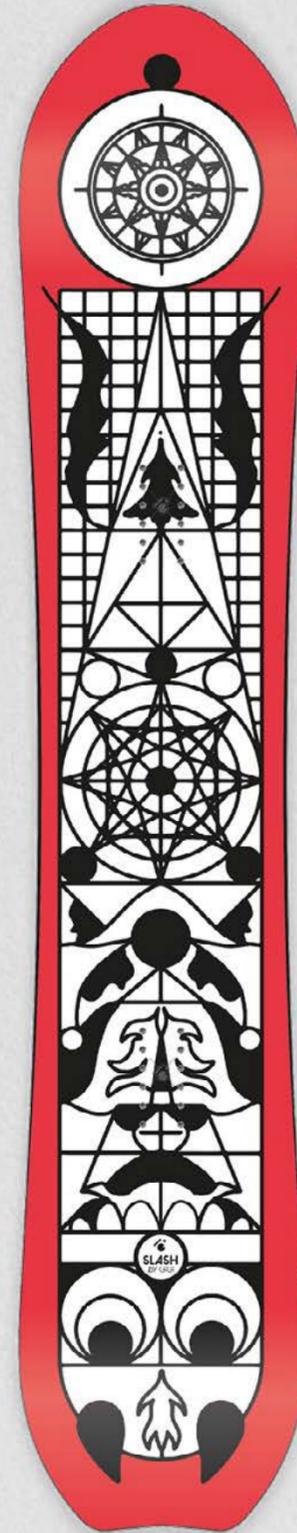

### Ride the Line

The Straight is a fast, stable freeride board built for carving steep lines, pow turns, and confident speed. Its camber underfoot, rockered nose, and Forever Woodcore deliver float, precision, and snappy edge-to-edge response.

David Leitner's graphic adds a layer of expression, reflecting tension between control and chaos - turning every ride into a statement.

# SPLASH

MMA

PACT

## SPLASH IMPACT

→ The Slash Splash is built to help young riders make their first turns with confidence - and have a blast doing it.

Light, forgiving, and packed with easy-ride tech, the Splash gives kids the smooth, catch-free feel they need to progress fast. A soft flex keeps everything playful, while the stable profile helps little shredders stay balanced from the bunny hill to their first real runs. Whether they're linking turns or learning tricks, the Splash is the perfect partner for building skills and spreading stoke.

Perfect for: first-timers, young progression, all-mountain fun

Why kids love it: light, poppy, and super easy to steer

Why parents trust it: durable construction, confidence-boosting feel

<b>APPLICATIONS</b>	<b>I</b>	 I1	 I2	 I3	 I4	 I5	 I6	 I7

<b>A 1</b>	<b>TWIN</b>
<b>A 2</b>	<b>DIRECTIONAL</b>
<b>A 3</b>	<b>DIRECTIONAL TWIN</b>
<b>B 1</b>	<b>CAMBER</b> A tried and true camber profile that offers a precise feel, predictable turns, solid edge hold, suspension and powerful pop. Traditional camber distributes weight evenly and offers a progressive flex pattern.
<b>B 2</b>	<b>HYBRID CAMBER</b> features a loaded camber section between the feet and rockered tips. The camber section maintains stability between the feet, while the flat areas underfoot let you load up ollies and the rockered tips offer forgiveness. This creates a very playful, easy turning board.
<b>B 3</b>	<b>HYBRID CAMBER SB</b> The setback Camber Rocker design places rocker in the nose and a slight amount in the tail with positive camber in between. This setback design delivers camber stability and control between the feet and in the tail, with the added float and manoeuvrability of the rockered nose.
<b>C 1</b>	<b>FOREVER WOODCORE</b> Constructed from four different lightweight wood species—paulownia, spruce, beech and poplar—for a premium core that offers a highly tuned and dynamic feel. It's flyweight, durable, filled with pop and highly reactive.
<b>C 2</b>	<b>POP WOODCORE</b> Arranged with premium strips of poplar for a lightweight and smooth flex with added beech hardwood stringers tip to tail through the inserts for power transfer and durability.
<b>D 1</b>	<b>TRI-AX FIBERGLASS</b> Triax fiberglass is the time-tested classic. It features a three-way weave of premium fibers with strands running at 45-degree angles. It provides superior pop, consistent torsional flex, and more overall response.
<b>D 2</b>	<b>BIAX FIBERGLASS</b> Biax fiberglass is a two-way weave of fiberglass with strands running every 90-degrees. It's more forgiving, easier to flex and highly versatile for all terrain types.
<b>E 1</b>	<b>BURIED TREASURE</b> This is our ultimate truss of carbon, Kevlar and basalt fibers. The effect is lightness because the connecting strength of fiber allows us to slim the core's thickness. With our strategic placement this gives certain liveliness to the board by adding response to the tips and leaving torsional softness between the feet.
<b>E 2</b>	<b>CARBONBON</b> Two carbon fiber stringers stretching outward from the inserts to the contact points in both the tip and the tail. Like prongs sticking outward these additives feel out rough terrain, promote pop, generate stronger edge hold and create a more playful ride.
<b>E 3</b>	<b>LANDING STRIP</b> Strips of Kevlar and carbon fiber placed from the inserts to the tips in the nose and tail to support landings and reduce washouts. This design also helps dampen high-speed chatter, offer stability at speed and load up potent ollies.
<b>F 1</b>	<b>PROGRESSIVE SIDECUT</b> Our progressive sidecut design blends many radii and smooth contact points for buttery smooth turn initiation, edge-to-edge transition and edge hold. It's different for each model and matches the sidecut to the board's specific camber profile.

<b>F 2</b>	<b>SINGULAR SIDECUT</b> A predictable and powerful sidecut with a single radius that makes for consistent turns. It's ideal for intermediate and advanced riders who already know how to carve a turn, like to ride fast, and desire strong edge hold.
<b>G 1</b>	<b>SINTERED BASE</b> Our Sintered quality base is fast, durable and requires less waxing. We believe in using the best possible materials in our boards.
<b>G2</b>	<b>EXTRUDED BASE</b> Extruded low-density running base material accepts wax well and absorbs blunt shocks extra.
<b>H 1</b>	<b>BELT FINISH</b> The belt finish gets your base optimized before it's fully waxed.
<b>H 2</b>	<b>DIAMOND STONE FINISH</b> We add a slight diamond-structured stone grind to the base to maximize glide and optimize durability. It eliminates the slow, suction cup feel that comes with one-dimensional base finishes.
<b>H 3</b>	<b>WAXED</b> All Slash boards are factory waxed with OneBallJay wax and ready to shred straight out of the wrapper.
<b>I 1</b>	<b>KICK STAND</b> Our Original Identity shape saves material and weight and also stands up without tipping over like rounded boards do!
<b>I 2</b>	<b>TIP PROTECTOR</b> Thin, light and surprisingly strong aluminum protectors that cap the base and edge at the tip and tail to protect the board from impacts.
<b>I 3</b>	<b>EDGES</b> We build our edges with 35% more steel content than the average. They are simply stronger and more durable than the alternative.
<b>I 4</b>	<b>ULTIMATE TRACTION</b> This small counter radius (bump) placed in the middle of the board's sidecut improves edge hold without creating drag or strange edge grip. It adds extra bite on ice and turns regular turns into confident carves.
<b>I 5</b>	<b>FLOAT INSERTS</b> An extra set of inserts set way back for those super deep days.
<b>I 6</b>	<b>RUBBER DAMPENING</b> A vibration dampening rubber used between the steel edge and the sidewall. Absorbs impacts only to a very small degree, its main purpose is to act as an adhesion layer between the edge and sidewall to prevent the possibility of delamination.
<b>I 7</b>	<b>3D LIFT</b> pulls the tip (and tail) of the board away from the snow. Subtly in the ATV's tip & tail, akin to a dog's ears, it provides more butterability and extra float.
