2019/20 SNOW

VANS SNOW 2019/20

We only know where we are going because we know where we have been. For over 20 years Vans Snow has stood for one thing: building the best possible products so you can unlock your most genuine expression of style. Founded in our rich heritage and evolved through purpose-built innovation, our boots offer a fully customizable interface so that you can fine-tune fit, flex, and feel.

This winter, Vans has picked the brains of our diverse athlete team to further progress the most possible from a snowboard boot—perfecting every detail to better address the demands of our riders and the terrain they call “home”. From a head-to-toe Jake Kuzyk collection to a signature Bryan Iguchi Verse™, the result is out-of-the-box performance and comfort you can feel.

So whether you spend your days skinning in the backcountry or hiking down bars in the city, Vans Snow has you covered.

JAKE KUZYK HI-STANDARD™ OG

Tasteful trick selection, an eye for creativity, and effortless style are all traits of one of the greatest street riders in the world, Jake Kuzyk. So when we asked Jake which boot he wanted a signature model in, we were not surprised to hear him say the Hi-Standard OG. With features like our new V1 UltraCush® liner, V1 POPCUSH™ footbed and V1 Waffle Lug outsole, you are getting the utmost boardfeel with unrestricted mobility. Jake's signature boot colorway carries across a variety of apparel and footwear, as seen in his full collection.

JAKE KUZYK COLLECTION

The Kuzyk Shell blends lightweight, all-weather protection with minimalistic, street-influenced design. Boasting a DWR coating and welt pockets, this piece of outerwear will keep you dry whether you're clearing steps or stacking clips. Tying back to Jake's signature Hi-Standard™ OG boot, the Kuzyk Shell was designed in conjunction with a full collection that features a Standard snow boot, an Old Skool™ shoe style, and a Smartwool® snow sock with PhD® performance and Indestructawool™ technology.

MARY RAND

Hailing from the east coast, Mary Rand cut her teeth riding rugged street and park terrain. As she made her way west and onto the elite global team, she quickly added “backcountry savage” to her profile. This stark contrast of terrain required a boot that could do it all, which is why Mary chose the Ferra™ Pro. Coupled with a V2 UltraCush® Smartwool® liner, V2 POPCUSH™ footbed, and Vans’ Hybrid Boa® Closure System, the Ferra™ Pro delivers infinite on-the-fly adjustability for tackling all types of terrain. Mary’s custom colorway is also featured in a Mid-Slip MTE and an Old Skool™ style.

PAT MOORE

When you are stepping up to features that are larger than life, you'd better be armed with equipment that can match your confidence, power, and style. For Pat Moore that weapon of choice is the Infuse™. Fortified with our V3 UltraCush® TNF Flashdry™ liner, V3 POPCUSH™ footbed, Hybrid Plus Boa® Closure System, and a V3 UltimateWaffle outsole, the Infuse™ is your access pass to all-terrain annihilation.

BRYAN IGUCHI

What do you get when you combine a lifetime of backcountry expertise with unbridled creativity? You get the Verse™ designed by Bryan Iguchi. Built to perform in the most extreme backcountry terrain, the Verse™ delivers all-day support, comfort, and performance. Featuring our V3 UltraCush® TNF FlashDry™ liner, V3 POPCUSH™ footbed, waterproof zip shroud, and a V3 UltimateWaffle outsole, this boot is a big mountain weapon ready for whatever you throw at it. Bryan's custom colorway is also featured in a UltraRange™ Hi GORE-TEX® MTE.

SHALLOWTREE

Shallowtree's work is an attempt to connect us with the timeless and infinite that we implicitly understand but cannot grasp in our own linear experience of life. His art addresses our connection to nature and all creation with its cycles of birth, growth, decay, and death. Shallowtree's visionary artwork can be seen on a men's and women's Hi-Standard™ OG, as well as a full collection of apparel and footwear that include a SK8-Hi® and an Authentic™ style, a long sleeve T-shirt, and a snow sock.

TECHNOLOGY

POPCUSH™

Won't pack. Pops back.
Vans' highest level of impact cushioning coupled with a custom-tuned energy return for snowboarding, skateboarding, or BMX.

ULTRACUSH®

UltraCush is a performance foam compound developed by Vans for enhanced comfort and reduced weight.

VANS HEAT RETENTION 360°

All Vans snowboard boots feature a newly improved thermal retention layer that provides a 360° wrap of the toe box and between the outsole and the liner. This essential layer keeps heat in and cold out, ensuring all-day warmth and comfort.

VANS / TNF FLASHDRY™

Back for a second season, Vans and trailblazing outdoor innovators The North Face™ continue their partnership on the first-to-market FlashDry-equipped snowboard boot liner.

FlashDry fabric technology is engineered to act like a second skin, pushing moisture to the surface and eliminating it as fast as possible. These fabrics are engineered to repel and resist wetting out to help provide quick drying performance that keeps the user dry and comfortable. Setting a new industry standard in moisture management and all-condition comfort, this technology has now been integrated into all of the newly redesigned Vans V3 UltraCush FlashDry liners.

SMARTWOOL®

New for 2019/20, Vans has partnered with the Merino wool experts at Smartwool to create another first-to-market tech feature. The all-new Vans V2 UltraCush Smartwool liner is made with soft, odor-resistant, moisture-managing Merino wool to keep you feeling dry and comfortable even in the deepest powder.

Merino wool is warm yet breathable—helping to maintain a dry, thermoregulated microclimate inside your boot. As your body heats up, sweat vapor is quickly absorbed by the wool fiber and transported away from your skin. A Merino fiber can absorb and retain up to 30% of its own weight in moisture and still feel dry to the touch. This makes it perfect for everything from long runs on groomers to backcountry explorations.

Forget about heading in early this season. The new V2 UltraCush Smartwool liner will help you stay warm, dry, and ready for your next run.

VANS V-SERIES ULTRACUSH® LINERS

Our mission when redesigning the entire offering of V-Series liners was to make them simple and comfortable in a way that would optimize boot fit and performance. Fewer seams, updated comfort packages, and increased volumes of neoprene are just a few of the changes you'll see on the all-new liners.

Completely redesigned, they represent the most advanced concepts ever delivered from Vans. In addition to expanding the partnership with The North Face™'s FlashDry™ technology across all V3 liners, all V2 liners now come complete with Smartwool Merino wool, elevating the liner game to new heights.

“The new V3 liner is noticeably warmer and more comfortable. The updated foam package and foot articulation that the expanded neoprene Comfort Flex zone allows is a valuable improvement.”

—Bryan Iguchi, Vans Snow Team Rider

V3 ULTRACUSH TNF FLASHDRY LINER

- UltraCush interior cushioning layer
- The North Face FlashDry materialization
- Expanded Comfort Flex neoprene forefoot
- Updated X-Cage for superior heel hold
- Dual-density, heat-moldable core
- Closed-seam microsuede cuff and tongue

V2 ULTRACUSH SMARTWOOL® LINER

- UltraCush interior cushioning layer
- Smartwool Merino wool materialization
- Extended Comfort Flex neoprene toe box
- Updated X-Cage for superior heel hold
- Dual-density, heat-moldable core
- Closed-seam microsuede cuff and tongue

X-CAGE

Welcome to the next generation of the Vans X-Cage. This new and improved adaptation of our classic heel lock component offers an updated asymmetrical, anatomical shape that fills the space around your ankle bones with a soft durometer EVA foam. Available on the new V2 UltraCush Smartwool and V3 UltraCush FlashDry liners, the new X-Cage is designed to keep your foot securely in the heel pocket and in constant contact with your snowboard.

V1 ULTRACUSH LINER

- UltraCush interior cushioning layer
- Dual-density, heat-moldable core
- Comfort Flex neoprene toe box
- Closed-seam brushed fleece cuff

VANS V-SERIES POPCUSH™ FOOTBEDS

Comfort and support are the foundation of snowboard boots, and the all-new POPCUSH V-Series footbeds from Vans redefine both. With advanced 3D anatomical shaping and an anti-fatigue PU materialization and design, these footbeds offer an innovative formula that provides tuned energy return and the highest levels of impact cushioning. Tested and approved by our team riders, the new POPCUSH V-Series footbeds provide the kind of comfort and performance that only Vans can provide.

“My feet have a new happy home. I really like the cushion and support from the POPCUSH, and am hyped to spend winters on them from now on.”

—Dan “Danimals” Liedahl, Vans Snow Team Rider

V3 POPCUSH FOOTBED

- Tri-density POPCUSH construction
- OrthoLite® open-cell foam top layer
- TPU arch support heel clip provides stability while allowing torsional flex
- Advanced 3D-molded anatomical shape
- Anti-fatigue coring design
- Airflow perforations
- Nylex moisture-wicking top sheet

V2 POPCUSH FOOTBED

- Dual-density POPCUSH construction
- TPU arch support heel clip provides stability while allowing torsional flex
- Advanced 3D-molded anatomical shape
- Anti-fatigue coring design
- Airflow perforations
- Nylex moisture-wicking top sheet

V1 POPCUSH FOOTBED

- Single-density POPCUSH construction
- Advanced 3D-molded anatomical shape
- Anti-fatigue coring design
- Airflow perforations
- Nylex moisture-wicking top sheet

YOUTH ULTRACUSH GROW-WITH-YOU SHIM

Designed for growing feet, this practical youth footbed sits atop a second built-in footbed and can be removed as the foot size grows, adding a half-size of extra room and extending the life of the boot.

VANS V-SERIES SNOWAFFLE OUTSOLES

Vans Snowaffle outsoles are engineered to optimize boardfeel, traction, and control, minimize the impact of hard landings, and reduce foot fatigue caused by long days of riding. The V-Series offers designs engineered to deliver flawless function, from pro-level performance to lightweight simplicity—and everything in between.

V3 ULTIMATEWAFFLE

The UltimateWaffle represents our most progressive thinking in outsole technology. Loaded with features, it is found only on our top shelf product and offers the widest range of versatility. From stomping a big landing to side-hilling a hike (and even traction on your sled) you can count on the UltimateWaffle.

- UltraCush midsole construction for lightweight performance and advanced dampening
- Aggressive perimeter lug pattern for all-terrain traction and optimum snow release
- Co-molded asymmetrical ESS arch cradle for enhanced stability and energy transfer

V2 WAFFLEFLEX™

The WaffleFlex is a lightweight and flexible outsole that combines our weight-reducing UltraCush midsole with metatarsal flex grooves, designed to improve boardfeel and natural flex.

- UltraCush midsole construction for lightweight performance
- Metatarsal flex grooves for increased feel and flex
- Perimeter lug pattern for increased traction

V1 WAFFLE LUG

The original Vans waffle outsole is an iconic skate classic. And with the introduction of our all-new V1 Waffle Lug outsole, we pay tribute to the timeless vulcanized look that put Vans on the map.

- Aggressive reverse waffle lug pattern for all-mountain and street performance
- Vans’ special recipe rubber compound for all-condition traction

REVERSE WAFFLE

The Reverse Waffle outsole flips a classic Vans design inside out to create a unique look and feel. Optimized for snow, it offers boardfeel and impact absorption plus all-condition traction in an affordable package.

- Single-piece rubber cupsole
- Oversized inverted waffle tread pattern

LINERLESS TECHNOLOGY

The bottom line: Linerless technology redefines simplicity and modern comfort. Its lightweight construction and slimmed-down upper reduces a boot’s overall size and weight. An increased internal foam package provides a softer, more cushioned feel. Without internal harnessing, riders will experience unmatched ease in and out of the boot. A calculated combination of support and free-flex articulation makes linerless technology ideal for performance, street, or park riders choosing the Hi-Standard™ DX boot, or skill- and price-conscious riders looking for value and comfort in the new Aura™, Encore™, Hi-Standard™, or Juvie™ models.

“Linerless boots are the most ninja-like boots I’ve ever stepped into. They’re the simplification of the future and bring you closer to the snow. They make me feel like I’m wearing clouds, and I can do things in them that I couldn’t otherwise do on my snowboard.”
—Mike Ravelson, Vans Snow Team Rider

LINERLESS BENEFITS

VANS BOA® CLOSURE SYSTEM

Vans has backed Boa since day one. As the proven leader, Boa technology delivers the most powerful, targeted, and accurate no-stretch closure system—plus the convenience of on-the-fly micro-adjustability for unmatched fit and custom comfort. Our newest range of Boa boots offers excellent options for all.

BOA BENEFITS

POWERFUL, TARGETED CLOSURE - MICRO-ADJUSTABILITY
ON-THE-FLY ADJUSTMENT - VERSATILE - NO STRETCH

BOA CUSTOM FOCUS PLUS

Custom Focus Plus features two high-power reels that control three zones of closure linked by Vans' exclusive Custom Slide Guide, delivering concentrated closure around the instep area for superior heel hold.

BOA CUSTOM FOCUS

Custom Focus features a high-power coiler reel and a mid-power remote reel to control three zones of closure linked by Vans' exclusive Custom Slide Guide, delivering concentrated closure around the instep area for focused heel hold.

BOA COILER

This tongue-mounted single reel system utilizes a spring-loaded spool to automatically retract cable slack for quick and efficient closure. Cable guides are designed to optimize closure force in specific areas of the boot.

BOA CLOSURE

A tongue-mounted single reel system provides quick, efficient closure enabling easy, on-the-fly adjustments for targeted comfort and performance.

VANS HYBRID AND HYBRID PLUS SYSTEMS FEATURING THE CUSTOM SLIDE GUIDE (PATENT PENDING)

Both Hybrid systems put comfort and control at your fingertips. This tech combo enables adjustable flex control and powerful heel hold throughout the instep area using the Custom Slide Guide. Simply slide it where you need it ... then dial it down.

VANS HYBRID PLUS

VANS HYBRID

VANS HYBRID PLUS BOA

The Hybrid Plus system expands the range of flex control from the original Hybrid Boa configuration by adding an extra Boa pass around the back of the boot and across the instep to optimize the lines of pull and maximize flex control capabilities.

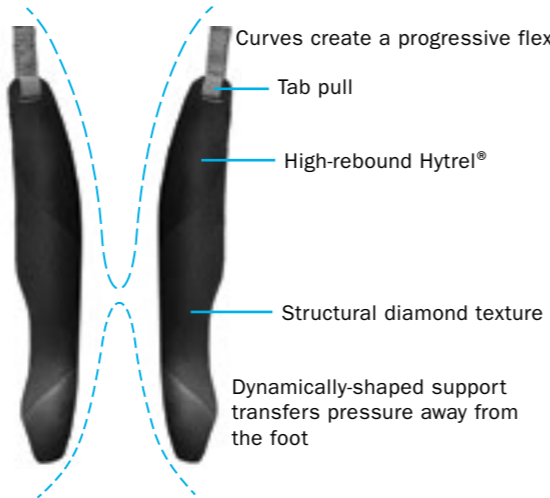

VANS HYBRID BOA

The Hybrid system merges traditional lacing with the power of Boa closure at the instep and the adjustable flex control of the Custom Slide Guide for secure, targeted heel hold and true custom comfort.

VANS FLEX CONTROL SYSTEM (PATENT PENDING)

Our removable, high-rebound Hytrel® tongue stiffeners enable riders to custom-tune their boot flex. Keep both in for maximum support, use just one for increased lateral or medial response, or take them both out for a softer-flexing boot. As your boots soften up over time, add the tongue stiffeners back in to extend the life of your boots.

REMOVABLE INTERNAL TONGUE STIFFENERS

SUPPORT OPTIONS

Standard Support

Lateral Support

Medial Support

Full Support

TONGUE LOCK DOWN 1

The Tongue Lock Down 1 (TLD1) system adds an additional level of heel hold by connecting with your external laces and pulling the boot tongue toward your instep while tightening.

TONGUE LOCK DOWN 2

Vans’ patented Tongue Lock Down 2 (TLD2) also pulls the tongue toward your instep as you tighten down your internal harness lace for additional heel hold. Different from TLD1, this achieves an even more focused connection by attaching directly to the internal lacing rather than the boots’ external laces.

BOOT HARNESSSES

V3 HARNESS

This advanced support harness delivers our highest level of support to the ankle and instep, keeping the V3 liner and boot shell locked in and connected.

V2 HARNESS

Customize your heel hold with the V2 harness as it works in tandem with the V2 liner to provide enhanced support and personalized fit.

V1 HARNESS

Our lightest and most simple harness is designed to ensure effective support and heel hold when paired with our V1 liner.

POWERCUFF STRAP

Power is the operative word with the PowerCuff Strap. It provides extra support at the top of the boot for increased stability and response. Its configuration gives riders customizable levels of engagement and the option of wrapping the strap around the internal liner or the exterior tongue.

OTHER BOOT FEATURES

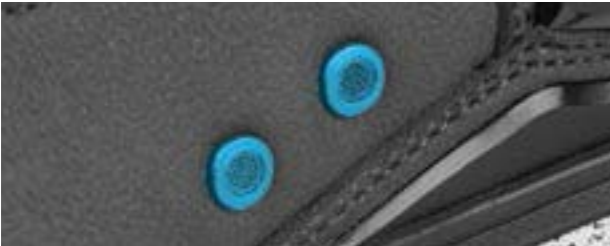

PLEASURECUFF™

The supple elasticity of the PleasureCuff delivers a cushioned, comfortable fit that keeps your calves supported.

INSTEP FLEX ZONE

The Instep Flex Zone functions to maintain natural ankle flexion in your boot, whether in or out of your bindings.

BREATHABLE VALVES

These waterproof valves allow one-way moisture management by transporting moisture away from your foot, ensuring breathability and thermal regulation for dry, comfortable feet.

WATERPROOF ZIPPER SHROUD + D-RING

This feature—unique to the Verse™ boot—is a durable and weatherproof fabric shield that protects the lower part of your boot from snow, ice, and moisture, ensuring easy access to your Boa closure no matter what the weather throws at you. It also features a metal D-ring for securely fastening your pant gaiters to lock out snow.

BOOT GUIDES

Selecting the right boot isn’t always easy. There are a lot of choices and if you’re not familiar with all the specific features and benefits of each one, it can be overwhelming. We understand this. So along with the listing of tech features that follows for each boot, you will find three different guides to help you narrow down the right options for you. From selecting a preferred flex to assessing your own skill level (and even the terrain style that you primarily ride) these guides are intended to take away some of the guesswork of finding the boot that best matches your needs.

VANS SKILL LEVEL GUIDE

The Skill Guide allows riders to self-evaluate while selecting boots. Most boots provide ranges from Beginner to Intermediate or Intermediate to Advanced, although some boots are specific to Beginners or Advanced riders. Selecting a range and boot that best matches your current skill level increases your chances of finding the best possible fit for you.

BEGINNER

INTERMEDIATE

ADVANCED

VANS FLEX GUIDE

Our flex rating provides a point reference for how boots within the Vans line compare in flexibility. A lower number designates a softer-flexing boot; higher numbers designate a more supportive boot. Boots equipped with the Vans Flex Control System, PowerCuff Strap, and Hybrid Plus systems will have larger ranges indicating the scope of flex within which each boot can be adjusted.

Most Flex

Most Support

TERRAIN GUIDE

Similar to the Skill Guide, when riders are selecting a boot they should self-evaluate the terrain style that they primarily ride. Again, most boots offer ranges from Park/Street to All-Mountain or All-Mountain to Big Mountain/Backcountry, but some are specific to certain terrains. It’s optimal to select a boot that best fits the terrain that you ride most frequently.

BACKCOUNTRY

Purpose-built for steep, deep, untouched terrain, above treeline and beyond the boundaries.

ALL-MOUNTAIN

Optimized for versatility, from parks and powder to side hits, rails, and everything in between.

PARK / STREET

Adapted to the technical terrain of parks, transitions, and urban environments.

LINE ARCHITECTURE

Line architecture is a framework that simplifies how we think and talk about our boots by creating clearly defined product levels. This structure makes it easier for us to communicate consumer choices based on user benefits and needs rather than specific features or price points.

MEN'S SNOWBOARD BOOTS

INFUSE™

Our flagship Infuse boot represents the pinnacle of dynamics and performance for Vans. Developed and now proven to over-deliver in every detail, it offers the ultimate in customized fit, unlimited all-terrain adaptability, and comfort. Utilizing our revolutionary Hybrid Plus Closure System, it offers infinite options for on-the-fly adjustability, putting pro-level response, flex, and function literally at your fingertips.

HI-STANDARD™ OG

The Hi-Standard OG is the best-selling Vans boot of all time, and continues to be the standard-bearer for classic style and modern performance. The comfort and familiar feel of traditional lace-up closure gains additional support from key features like our Instep Lace Lockout and Internal Web Harness. With its V1 Waffle Lug outsole and iconic sidestripe, this timeless Vans style speaks for itself.

HI-STANDARD™
LINERLESS / DX

The Hi-Standard Linerless DX is an innovative, one-of-a-kind boot like nothing you've worn before. Its slimmed-down, linerless design was developed for street and park riders seeking the freedom of closer contact and better boardfeel. Reduced volume in the upper results in a smaller overall boot, while the V1 Waffle Lug outsole provides a standard footprint for fitting into bindings. The lightweight construction ensures a more connected and skate-like feel, with critical cushioning and support features built directly into the upper.

TECH SPECIFICATIONS

Viaje (Vee-ah-hey) means journey in Spanish, and this all-new model is a true journeywomen’s tool. The Viaje comes complete with a full complement of V3 series components and the Vans Flex Control System. Utilizing our Custom Focus Plus construction, this boot also features the micro-adjustability of a Boa Closure System in a dynamic, dual-zone configuration that ensures unlimited, on-the-fly flex control and superior heel hold for the most demanding riders. A new lower shroud, D-ring gator hooks, and one-way breathable valves make this the most moisture-managing and performance-oriented boot in the women’s line.

STANDARD™ ZIP SNOW BOOT

The new Standard Zip snow boot features a premium leather upper for upgraded style and a waterproof medial zipper for added entry and exit simplicity. As with all Standard models, the MTE 2.0 outsole provides excellent traction, while the removable felt liner offers next-level warmth. Weatherproofing and classic Vans style put the Standard Zip in a class of its own.

ULTRARANGE™ MTE HI GORE-TEX®

Originally created for the Vans Vault collection, this modern all-conditions must-have has now found a permanent home in our Snow collection. The UltraRange is Vans’ most versatile shoe design to date. With comfort and traction at the forefront of its design, Vans celebrates the UltraRange’s signature co-molded midsole by blending UltraCush foam cushioning with Vans’ original waffle rubber compound to provide a modern fit and feel that caters to all-day exploration. Additionally, products engineered with GORE-TEX are durably waterproof and windproof, and offer optimized breathability. In and out of any terrain, the UltraRange accommodates for superior comfort and mobility, extending your adventure for as long as you like.

STORM COTTON™

STORM COTTON technology is a water-repellent shield that causes water to form beads that roll off the fabric surface, helping you stay dry. This technology minimizes the amount of water the fabric will hold, allowing for quicker drying. The STORM COTTON finish maintains excellent performance throughout the life of the garment, and does not inhibit cotton's natural ability to breathe.

3-66 HIDDEN MEDIA POCKET

The 3-66 media pocket patent-pending design for quick access and secure phone storage utilizes proprietary elastic pull-strap and internal headphone support.

DURABLE FABRIC BLEND

Premium fleece with higher-quality cotton yarn on the face is built to withstand more abrasion and increase durability.
